In the South, many initiatives based on local needs and capabilities have created a different development path that aims at self-reliance, empowerment, solidarity, and more equitable social relations (Mies 1998).[20] As GEC has been seriously affecting many developing countries, and most particularly their poor and marginalized people, various mitigation and adaptation processes have already been launched from the bottom-up (MST, Vía Campesina, Cadena 2009).[21]

From the perspective of the humanities[22], philosophers proposed an ethics of responsibility for nature (Jonas 1979; Hösle 1990, 1991, 1997; Tamayo 2010) and a deep ecology (Capra 2002; Menke-Glückert 1994; Lovelock 1979); some anthropologists (Aripze 2009) suggested material and immaterial learning processes to combine modern and traditional knowledge, livelihood diversification, to move towards a new culture of consumption (Schumacher 1973), and a long-term land planning and sustainable land management.

While many conceptual contributions have been made from the vantage point of the natural and social sciences and the humanities to reflect on the meaning and use of the sustainability concept in the respective disciplines, so far only very few integrated and policy-focused sustainability scenarios have been developed that translate the broad calls for a new deal, for an energy and sustainability revolution through a decar-

22 According to Maxwell White (1997: 263) "the humanities ... offer models and methods for addressing dilemmas and acknowledging ambiguity and paradox. They can help us face the tension between the concerns of individuals and those of groups and promote civil and informed discussion of conflicts, placing current issues in historical perspective. ... The study of the humanities provides a venue in which the expression of differing interpretations and experiences can be recognized and areas of common interest explored."

bonization of the economy to achieve at least a global emissions reduction by 50 per cent by 2050, and to limit the increase of the global average temperature to 2 °C by the year 2100.

To move from the still prevailing *business-as-usual vision* in a Hobbesian world of the early 21st century towards the alternative sustainability vision in a more cooperative world where hegemonial aspirations and great power games are replaced by cooperation in a multilateral world based on an effective implementation of international law and specifically of the global environmental conventions, more integrated multidisciplinary scientific scenarios are needed that translate the sustainability goals into concrete short-, medium-, and long-term priorities for action.

In the political realm, moving towards the alternative sustainability vision requires both the political will and the determination to implement the many international and national action plans that have been adopted by numerous conferences, and to make the agreed resources available that would permit their effective implementation. But this requires overcoming the constraints of the democratic process and besides new forms of governance. Also, many new policies to better cope with the impacts of climate change on the national and global level are needed.[23]

To move from mere policy declarations to effective action towards sustainability requires both courage, bold and realistic schemes in the industrialized countries but also in developing countries by sharing knowledge and technologies, by enhancing energy efficiency and replacing fossil fuels with renewables on the local, national, regional, and global level in the production, transportation, communication, and consumption systems.

The alternative sustainability vision fundamentally challenges individual, local, and national economic and political preferences and interests. This requires a wide political awareness of the population, a willingness of the media to report on these alternatives and of the people to vote for societal forces and politicians that are capable of translating their policy goals into effective action and to launch a political struggle to shift political preferences.

To move from mere national political rhetoric and weak multinational policy declarations to determined and effective political action requires to challenge, contain, and overcome the many policy constraints and restrictions posed by the actors and their economic and political interests that are often linked to the *business-as usual* vision on responding to sustainable development needs and to the dangers posed by GEC and climate change.

On the political and security realm this requires to recognize that we and not they are the primary threat to the Earth System, and that we are causing the physical and social climate change impacts. Moving towards the vision of a sustainable peace with human security requires overcoming the Hobbesian obsession of a militarization of the climate change impacts for national security.

95.5 Policy Strategies for Coping with GEC: From the Business-as-Usual Towards the Sustainability Vision

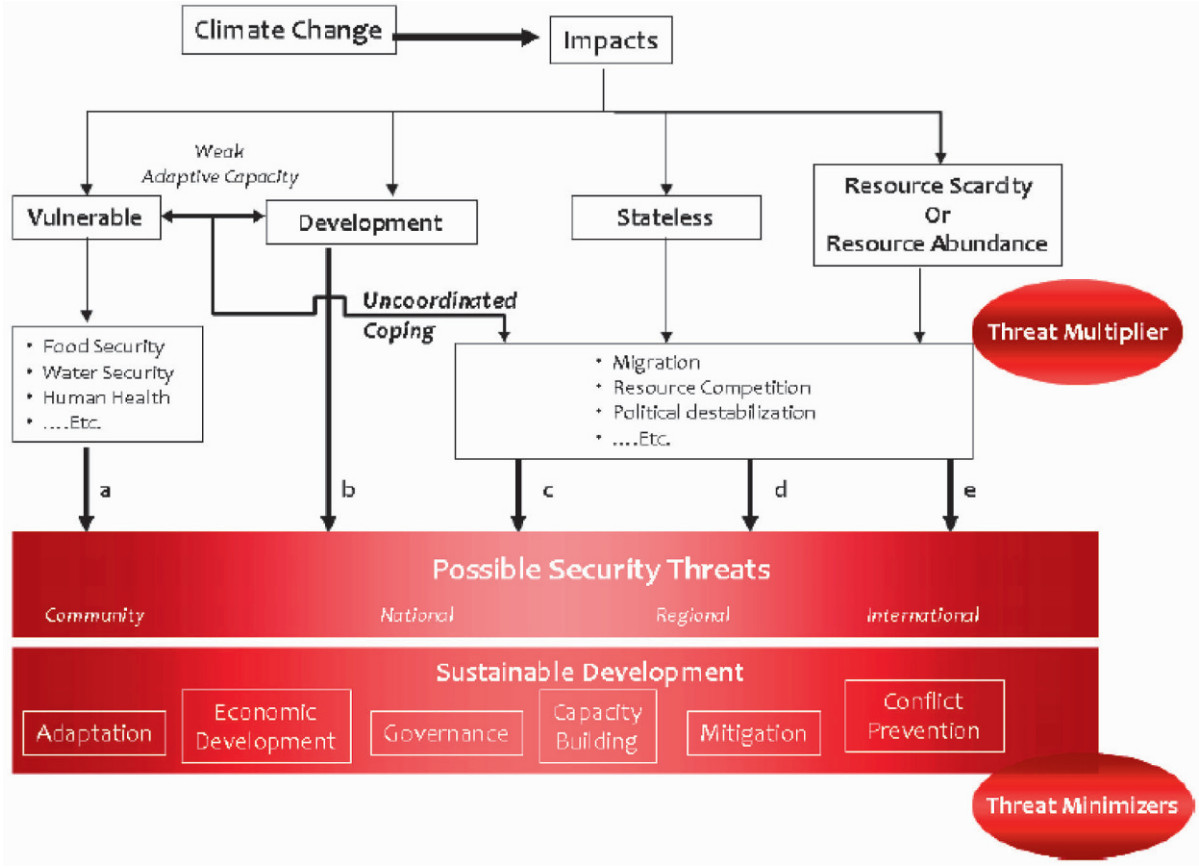
Policy strategies for coping with *Global Environmental Change* (GEC) in the Anthropocene during the 21st century require a shift from the dominant *business-as-usual* towards a *sustainability* vision within society, the business community, and the political realm (Brauch/Oswald Spring 2009a). To assist the transition towards a sustainable transformation, an analysis of the specific threats posed by GEC (95.5.1), a brief assessment of the reasons for the failure of COP 15 and of the 'Copenhagen Accord' (95.5.2.) is provided that will broaden the scope to the multiple national and international obstacles to the adoption and even more to the implementation of such a strategy (95.5.3) and that need to be overcome and to link sustainable development with sustainable peace (95.5.4); this section concludes with a discussion of the non-military means to be used in the economic, societal, and political sectors for achieving these goals (95.5.5.).

95.5.1 Analysis of the Threats Posed by GEC

As a result of human intervention into the Earth System, global environmental change and specifically global climate change is projected to pose multiple security threats, challenges, vulnerabilities and risks in the environmental and societal dimension for international, national, and human security. The report by

23 Held and Hervey (2009: 17) suggested on the national level taxation and just and equitable markets for carbon and other GHGs, applied scientific research, early high-cost investments, regulatory changes, infrastructural development and information instruments; on the global level they proposed: effective offset schemes for developing countries, establishment for environment dispute settlement mechanisms and a world environment organization.

Figure 95.1: Channels of threat multipliers and threat minimizers. **Source:** UN-SG (2009: 7).



(a) *Vulnerability*: Climate change threatens food, soil and water security and human health, and increases human exposure to extreme events.
(b) *Development*: If climate change results in destroying crucial ecosystem services, it will slowing down or reversing the development process, this will exacerbate vulnerability and could undermine the capacity of states to maintain stability.
(c) *Coping and security*: Migration, competition over natural resources, and other coping responses of households and communities faced with climate-related threats could increase the risk of domestic conflict with international repercussions.
(d) *Statelessness*: There are implications for rights, security, and sovereignty of the loss of statehood because of the disappearance of territory (small islands).
(e) *International conflict*: There may be implications for international cooperation from climate change's impact on shared or non-demarcated international resources.

the Secretary-General (11 September 2009) and the joint paper by the EU Commission and Council (14 March 2008) referred to climate change as a 'threat multiplier' for various potential security problems posed by global climate change.

The report by the Secretary General (2009) addressed possible security implications for climate change based on an analysis of "governmental views and relevant research" that referred to five channels through which climate change could affect security (figure 95.1).

This report distinguished among five types of threats to a) human well-being, b) economic development, c) uncoordinated coping, d) loss of territory and statelessness, and e) to international cooperation in managing scarce resources. It referred to multiple impacts of climate change that pose dangers for food, water and health security and for coastal regions, human settlements and infrastructure. For economic development, climate change poses serious challenges that:

> can cause a number of economic disruptions, negatively impacting growth, eroding the revenue base of governments and undermining governance capacities. ... Through its effects on nutrition and health, it may diminish human and animal productivity. It may also contribute to land degradation and cause damage to other natural capital ... and man-made infrastructure like roads, ports, power grids, etc., diminishing an economy's productive potential. ... Sea-level rise, increased risk of extreme weather events and damage to coral reefs and other coastal ecosystems will have an adverse effect on tourism and fisheries, on which many SIDS and other developing countries depend economically. ... In ... fragile states [with] internal tensions, increased climate-induced environmental stress could overstretch existing coping strategies and, in combination with a number of political, economic, and societal factors, could result in: (i) growing tensions over increasingly scarce natural resources, (ii) decreased state authority and increased risk of domestic strife, and (iii) political instability and radicalization.

Furthermore, the "adaptive capacities of individuals, communities, and even nation states may be severely challenged". Also, "uncoordinated coping and survival strategies may come to prevail, including migration and competition for resources, possibly increasing risks of conflict". The report argues that it is impossible to predict "whether and when climate impacts might induce large-scale involuntary migration and/or violent conflict", and it refers to projections that by 2050 migration "due to climate change and environmental degradation [may] vary between 50 million and 350 million" (IOM 2009).[24]

But the report also noted that "The empirical evidence on the relationship between climate change and conflict remains sparse and largely anecdotal." This is changing with new research that links climate and conflict models. Even if quantitative studies on environmental causes of conflict are lacking, this does "not mean they do not exist. Rather, environmental factors may exacerbate conflict dynamics and risk through multiple and indirect pathways, interacting in complex ways with social, political, and economic factors, which tend to be more direct and proximate drivers of armed conflict". Campbell (2007) referred to three regions: South Asia (Bangladesh), sub-Saharan Africa (Nigeria and East Africa) where climate induced migration "could pose the risk of heightened tensions and conflict". The existence of some Small Island Developing States (SIDS) countries is threatened by sea level rise (Kinnas 2009), e.g. "the Maldives, where 80 per cent of land is less than one meter above sea level and could therefore disappear over the next 30 years". The UNSG's (2009: 23) report also noted that

> climate change poses a fundamental threat to cultural survival for those societies whose territories and ways of life are threatened by sea-level rise and inundation, as noted by SIDS. Some Member States have noted that ... cultures ... of indigenous peoples may be at risk from destruction or radical alteration of ecosystems and habitat by climate change. Such peoples may also face challenges in using migration as a coping strategy as a result of discrimination in receiving locations. Thus, climate change's impacts on vulnerable societies will need to be addressed not only as an issue of sovereignty and statelessness but also as a threat to cultural identity.

The competition over scarce transboundary water resources (e.g. in the Indus, Ganges and Brahmaputra, Mekong, Nile and Zambezi basins) due to climate change may result in a deterioration of international relations and in some cases may even trigger or intensify conflicts. The UNSG's (2009) report also referred to the potential for cooperation and that climate change could thus become a 'threat minimizer' due to

> effective international and national mitigation actions, supported by finance and technology flows from developed to developing countries; strong support to adaptation and related capacity building in developing countries; inclusive economic growth and sustainable development which will be critical to building resilience and adaptive capacity; effective governance mechanisms and institutions; and timely information for decision-making and risk management. International cooperation will also need to be reinforced to address transboundary effects and to prevent and resolve climate-related conflicts in accordance with the Charter of the United Nations. Most submissions highlight the central role of sustainable development in enhancing adaptive capacity and as the overarching framework to address existing vulnerabilities which may be exacerbated by climate change.

The joint paper of the EU Commission and Council (14 March 2008) distinguished among these security threats posed by climate change for international security that may occur in different parts of the world: i) conflict over resources; ii) economic damage and risk to coastal cities and critical infrastructure; iii) loss of territory and border disputes; iv) environmentally-induced migration; v) situations of fragility and radicalization; vi) tension over energy supply; and vii) pressure on international governance. These potential

24 IOM Policy Brief: "Migration, Climate Change and the Environment" (2009). Based on recent studies, the report argued that in some cases migration due to climate variability and environmental degradation resulted in violent conflicts (Reuveny 2007).

security threats were discussed for 1) Africa, 2) the Middle East, 3) South Asia, 4) Central Asia, 5) Latin America and the Caribbean, and 6) the Arctic.[25]

These manifold potential threats – due to both the natural climate variability in addition to the anthropogenic climate change – to international and human security will not be caused by a specific enemy represented by a rival country. Rather 'we', as human beings, have produced the potential threats posed by climate change through our economic behaviour, therefore it is up to 'us' as human beings and part of humankind – representing both the cause and the victims – to initiate the 'Fourth Green Revolution' and to launch the transformation from the dominant vision of business-as-usual towards a sustainable vision in a multilateral cooperative world.

Thus, climate change poses primarily challenges for human and international security that can only be overcome by human ingenuity (knowledge on understanding the causes but also technical knowledge producing the artefacts that may assist us in coping with their multiple impacts) and peaceful multilateral cooperation. However, COP 15 in Copenhagen has shown that key mental, economic and political obstacles must still be overcome to prevent the security dangers referred to above from triggering violent conflicts during this century. As these obstacles are deeply rooted in our way of life, in our selfishness and our egotistic aspirations for our own economic well-being, overcoming these deeply ingrained constraints cannot be solved by convenient technical fixes but requires much deeper and radical changes in our own aspirations and consumption patterns and those of civil society, the business community, and finally also those of our governments and international organizations. This transition towards a 'Fourth Green Revolution' will not be without an intensive political struggle and repeated setbacks, as seen most recently at COP 15 of UNFCCC in Copenhagen.

95.5.2 Failure of COP 15 and the 'Copenhagen Accord'

Yves le Boer, Executive Secretary of the UNFCCC Secretariat, referred to three outcomes of COP 15 in December 2009 in Copenhagen: "1) It raised climate change to the highest level of government. 2) The Copenhagen Accord reflects a political consensus on the long-term, global response to climate change. 3) The negotiations brought an almost full set of decisions to implement rapid climate action near to completion."[26] COP 15 noted the 'Copenhagen Accord' that was drafted and approved by a few governments (USA, China, India, Brazil and South Africa) outside the negotiation framework and without any legal obligations and only 'noted' by the governments who were willing to do so, where these governments agreed on several goals and "to communicate their efforts to limit greenhouse gas emissions every two years, also listing their voluntary pledges before 31 January 2010". This legally nonbinding 'Copenhagen Accord'[27] refers to these agreements:

- Developed countries for the first time commit to a goal of jointly mobilizing $100 billion annually by 2020 from both public and private sources. There is a collective commitment to provide "new and additional, predictable and adequate funding" amounting to $30 billion for the period 2010–12, with "balanced allocation between adaptation and mitigation" with adaptation funding being prioritized for the most vulnerable developing countries.
- There is an explicit acknowledgement to act on deforestation and forest degradation and the establishment of a mechanism, i.e. a body to mobilize the required resources.
- Action and cooperation on adaptation, particularly in the least developed countries, small island developing states, and Africa have been given 'urgent' attention with developed countries com-

25 In a synopsis of selected reports Maas and Tänzler (2009) reviewed these six geographical regions focusing on the climate change trends, the converging developments, and the specific security implications.

26 See UNFCCC, Press Release, Copenhagen, 19 December 2009; at: http://unfccc.int/files/press/news_room/press_releases_and_advisories/application/pdf/pr_cop15_20091219.pdf and the press briefing by Mr. De Boer, Bonn, December 2009; at: <http://unfccc.int/2860.php>

27 The *Climatico Assessment* (2010: 24–25) on the Copenhagen Accord noted: "The Copenhagen Accord ... is a weak document, which fails to fulfil the UN's requirements of consensus among the 192 members to the Conference of Parties (COP), but also falls short of requirements for a robust global climate policy framework. ... It's likely that future discussions about tackling climate change might be more effectively raised at other forums [G8/G20 meetings] ... where approximately 30 countries ... represent over 90% of global emissions. This smaller group of nations will tackle a narrower agenda of issues, like technology sharing or the merging of carbon trading markets, without the chaos and posturing of the United Nations process."

mitting to provide financial resources. This could open the way to addressing a key concern of developing countries.[28]

However, the proposed annual US$ 100 billion falls far short of the US$ 400 billion per year that negotiators of the G77 + China called for during the conference. It remained unclear how many individual developing countries would commit and who would manage these additional funds, e.g. the World Bank, as the USA proposed, or an independent body under the UNFCCC, as many developing countries preferred.[29]

95.5.3 Obstacles for Coping with GEC and their Security Impacts

While during the past two decades a wide political consensus has emerged based on the four IPCC assessment reports (1990, 1995, 2001, 2007) that besides climate variability there has already been an anthropogenic climate change that will increase significantly during the 21st century based on the strategy, policies and measures to be adopted, the implementation of the goals of UNFCC and for the Annex I countries of the quantitative reduction goals under the Kyoto Protocol referred to major implementation deficits, and specifically under the post-2012 climate regime still to be negotiated. Gradually an understanding is evolving that climate change also increasingly poses security dangers.

While the public awareness on the political urgency has increased, the failure of COP 15 referred to a) major mental obstacles due to old worldviews and mindsets of many decision-makers in the societal, economic and political world, b) short-term interest-driven opposition, and c) deficient governance processes that are all a reflection that business-as-usual strategies still prevail, and that the willingness, courage and determination to move towards the alternative vision of a comprehensive transformation as part of a new global green deal has so far still been rather limited.

In synthesis, among all levels of society and geographical regions, a cultural breakthrough is crucial to change deep-rooted behaviours, beliefs, habits, and power structures to overcome the existing interests, and to promote in favour of nature and humankind a carbon free economy.

95.5.3.1 Mental Obstacles Due to Old Worldviews and Mindsets

In December 2009, COP 15 in Copenhagen has demonstrated that several leading actors were either unwilling or not capable to enter into legally binding commitments due to conflicting goals on the quantitative reduction targets, e.g. between the US (-15 per cent based on 2005) and the EU (-20 to -30 per cent based on 1990) and between developed and developing countries as well as on the financial commitments of industrialized countries to assist poor countries to adapt to climate change impacts (offers of US$ 100 billion vs. Third World demands of up to US$ 400 billion annually by 2020).

These and many other obstacles that have emerged during the UNFCCC since COP 1 (1995) refer to several mental obstacles based on the worldviews of societal, political, and economic elites in many countries, and on the mindset of key decision-makers that were expressed by: a) the *lack of will* to take the challenges posed by climate change seriously; b) the prevailing *thinking in terms of short-term, often selfish, national, state, local community and individual interests* that have put the climate change challenge down on the individual national and global priority list; and c) the *lack of readiness for a global climate deal* based on the "common but differentiated responsibilities" under Art. 4,1 of the UNFCCC and the lack of thinking in terms of common obligations based on solidarity and aiming at equitable sharing of the global resources.

Some of these obstacles are due to traditional human practice and experience, to the knowledge and preferences that have influenced, framed, and often determined the worldviews and mindsets of the elites, of the media and of social, economic and political institutions that have inhibited socio-environmental learning. Some of these deeply rooted determining factors may have been influenced by religious beliefs, patriarchal patterns, and the market-based capitalist system that is primarily driven by a profit motive and less by a sense of societal and global obligations to the Earth System or – in belief terms to 'creation'.

---

28 For early assessments of UNFCCC COP 15 and the 'Copenhagen Accord', see: Christian Egenhofer; Anton Georgiev: *The Copenhagen Accord - A first stab at deciphering the implications for the EU* (Brussels: CEPS, 25 December 2009); Noriko Fujiwara: *Reinvigorating the EU's Role in the post-Copenhagen Landscape* (Brussels: CEPS, 15 January 2010);

29 Climatico: *Copenhagen De-briefing. An Analysis of COP15 for Long-term Cooperation* (January 2010); at: <www.climaticoanalysis.org>.

Overcoming these prevailing mindsets and worldviews cannot be achieved solely by a new Copernican revolution towards sustainability, as some leading natural scientists suggested. While such a shift in our thinking on the Earth System is deeply needed, it will not be sufficient unless it is accompanied by a fundamental cultural transformation, or in our words by a 'Fourth Green Revolution' that addresses also the 'deep structures' of our mental processes that influence our perceptions, beliefs, symbols, interpretations and assessments. The prevailing power relations are deeply embedded within the patriarchal system of human relations. They prevent the change towards a sustainable relationship with nature, but they are also limiting the solidarity with other human beings and nations that are less favoured or more affected by the effects of climate change.

95.5.3.2 Short-term Interest-driven Opposition

The negotiation positions and strategies of the 192 negotiation partners at the Copenhagen Conference have been constrained by the national mandates of their respective governments, irrespective of whether they are democratic or authoritarian. Among social scientists it has been disputed whether democracies are more likely to protect the environment (Holden 2002) and to enter into stringent and legally binding global commitments for coping with GEC than non-democratic regimes. A better access to information, an open scientific debate, and the active role of societal environmental groups and coalitions, even though in some cases they have overwhelmed business interests (Bernauer/Caduff 2004; Falkner 2007; Held/Hervey 2009) are no guarantee that even liberal and progressive governments will take courageous negotiation positions for fear that they would later be defeated by their respective parliaments (e.g. the opposition of the U.S. Senate to the Kyoto Protocol of 1997 and the difficulties to adopt a climate bill in 2009 and 2010).

On the other hand, authoritarian governments may be less accountable to their public opinion and lobby groups (Congleton 1992) and more inclined to control and to distribute a large portion of the national wealth among a small elite (Bueno de Mesquita/Smith/Siverson/Morrow 2003); but once they are convinced of the urgency they may more easily disregard opposition and integrate significant GHG emission reductions into their longer-term national development planning.

However, as a comparison between the USA, Canada, Japan and Australia on the one hand and the 27 countries of the EU has shown, fundamental differences have existed between COP 1 and COP 15 among democracies. While some have adopted legally binding commitments and have fully implemented them, and as well are committed to 20, 30 or even 40 per cent GHG emission reductions (based on 1990 emission levels) until 2020, the most powerful democracy has opposed since 2001 any legal obligation and significantly increased its GHG emissions since 1990. But also within the EU the implementation of the Kyoto Protocol has widely differed during the past decade, with Mediterranean EU countries, where the impacts of climate change will be most severe, showing the weakest implementation record (chap. 26 by Brauch).

India and China may become test cases in the years to come as to whether the system of rule determines the climate change attitude of their governments. Both countries are projected to be the two major GHG emitters by the year 2030 and 2050.[30] While the political commitment of democracies to climate change in most cases has been higher, their effects on policy outcomes (GHG emission reductions) have often been ambiguous (Battig/Bernauer 2009).

But not surprisingly those countries whose existence is at risk from sea-level rise, the *small islands development states* (SIDS) in the Pacific as well as in the Indian and Atlantic Ocean, have been the most active in addressing climate change as an issue of their security and survival as nation states and cultures (PSIS 2009).

In some – but not all – democracies short-term orientation and interest-driven opposition has prevailed, and powerful economic lobby groups have successfully torpedoed any legally binding commitments by putting pressure on their governments or parliaments. Thus, the prevailing worldviews oriented at business-as-usual visions and Hobbesian worldviews (we have the means to adapt and can use our military instruments to fend off climate-induced migration and to deal with violent outbreaks after natural hazards) as well as short-termism, self-referencing decision-mak-

30 India and China have invested in renewables and China relies heavily on state-owned enterprises and public investments. In both countries the investment in talents has paid huge dividends. Their business practices account for slim profit margins, but a large domestic demand. They have promoted 'disruptive innovations' for new products. This term is used by the Harvard Business School for the setting up of hybrid companies with job creation and mass production techniques, e.g. for renewables.

ing and interest group concentrations (Held/Hervey 2009) are reflected in major deficits in both national and international structures and processes of governance.

95.5.3.3 Deficient Governance Processes

Among the major shortcomings of national systems, structures, and processes of governance pertaining to climate change and GEC we can cite:

- competition and a lack of horizontal coordination among ministries in this policy field;
- lack of information, training and competence;
- dominance of short-term reactive over long-term proactive strategies and policies;
- lack of longer-term visions, commitments and planning;
- mismanagement and corruption; and
- short-term, narrow and selfish economic, political, military and social interests and desires where the environmental consequences and costs have been ignored for far too long.

On the international level a weak multilateralism prevails with an anarchic inefficiency of international organizations, due partly to the unwillingness of governments to transfer parts of their sovereign decision-making power to these institutions, and partly to the absence of legally binding compliance obligations and of the instruments to enforce them. The concern with maintaining national sovereignty and control, which has already been fundamentally eroded by globalization processes and by the activities of multinational corporations and uncontrolled financial flows, have resulted in narrow and limited mandates for international organizations and in insufficient funding provided by the states. Thus, the UN system has been referred to as a scapegoat to cover up major deficiencies and failures by nation states.

To overcome the mental shortcomings, the short-term interests and the governance deficits and to efficiently cope with the physical and security impacts of global climate change requires an alternative vision beyond the adaptive strategies guided by business-as-usual considerations but also a perspective beyond the Hobbesian obsession that economic and military power and control remain the decisive means for protecting national security in a context of rapidly changing climate parameters by often ignoring the human security needs of its people.

95.5.3.4 Towards the Vision of a Global Sustainable Transformation

To move from the presently dominant socio-economic vision of *business-as usual* towards the alternative vision of a *global sustainable transformation* requires a new negotiated global deal among the nation states, their societies, and the national and transnational economic sector. Parts of the economic sector and of the business elites have already become major drivers towards a sustainable transformation of the economy by realizing more energy efficient production lines, thus reducing the material and energy needs and costs.

Wind energy alone has created more than 700,000 jobs in Europe, and microcredits in Bangladesh and India are able to promote solar energy in remote areas where there is no electricity. The development of locally designed green energy offers new development patterns,[31] creating also jobs for young people that are better trained and able to develop these technologies further. Electricity in these abandoned areas offers new work potentials that may improve their health and food situation and livelihood without charging the planet with new carbon emissions.

Increasingly organizations of the business community (e.g. the World Business Council on Sustainable Development; WBCSD) and new industrial branches (e.g. of the solar and wind power industry) have become key drivers towards a sustainable transformation of the economic sector. The private sector has become an important source of climate finance.

Moving towards a global sustainable transformation requires for the *Earth System* major activities both with regard to the four key components of the *environmental quartet* of climate change, water, soil and biodiversity. Additional measures are also needed regarding the *Human System* and especially pertaining to the four factors of the *societal quartet* that refer to population change, to rural and urban systems, and to various socio-economic processes.

On behalf of UNEP Achim Steiner, the Executive Director of UNEP and Under Secretary-General of

31 The International Energy Agency stated in 2010 that Chinese companies are rapidly bringing down the costs of photovoltaic systems that ranged from US $200–600 a megawatt-hour, while a MWh for onshore wind power costs US $50–70 in the USA. (See "The rise of Big Solar - Growing pains", in: *The Economist*, 15 April 2010; at: <http://www.economist.com/business-finance/display-story.cfm?story_id=15911021>).

the UN, has suggested in October 2008 a "Global Green New Deal" (see foreword by Achim Steiner).[32] This policy-initiative has been backed by many leading economists and social and natural scientists that have made specific proposals for a gradual sustainable transformation of the global economy as was suggested by UNEPs (2007) scenario of *Sustainability First*.

95.5.4 Analysis of Needed Measures and Means

To move towards this alternative medium- and long-term vision requires already now many bold initiatives and concrete policy measures that reduce GHG emissions to be still able to reach the goal of a global average increase of temperature of 2 °C by the end of this century, through:

a) enhanced energy efficiency, a shift towards renewables and a gradual dematerialization and decarbonization of the economy;
b) ecosystem recovery and restoration to maintain environmental services;
c) integrated water basin management, rain harvesting, providing safe water, sewage facilities (including recycling and reuse), enhancing irrigation efficiency and substitution with less water demanding plants;
d) combating soil erosion, degradation and desertification by integrated waste management, composting of organic waste; terracing, restoration of salinized and degraded soils, recovery of soil fertility by crop rotation;
e) changes in our 'ways of life' and 'lifestyles' by changing meat-intensive diets to vegetarian food (food culture);
f) reduction of advertisements and incentives for a consumerist waste economy and of individual demand for non-essential goods and enhancement of intellectual and spiritual aspirations possibly leading to a new modesty;
g) political reforms of democratic governance to enhance longer-term orientations over short-termism, proactive over reactive policies.

For this needed 'Fourth Green Revolution' the scientific community can make manifold contributions by

- specifying proposals for moving further towards a sustainability revolution from the perspective of the natural and technical sciences;
- outlining strategies and steps for anticipatory learning and proactive long-term policies from the vantage point of the social sciences;
- initiating public debates on changes of ways of life, of lifestyles, values, and on individual and collective aspirations and needs by thinkers from the humanities;
- promoting the goals, institutional structures as well as the strategies, policies, and means of global multilateral relations aiming at the vision of a sustainable peace; and finally
- negotiating contradictory development processes with opposed interests in favour of the common goods.

The Report of the Secretary-General (2009) on the security impacts of climate change suggested that the international community must:

- take bold action on climate change mitigation to avoid an intensification of security threats to human well-being;
- provide stronger support to climate change adaptation in developing countries through investments in capacity building on water management, food security and agricultural resilience; public health systems to deal with increased disease incidence and risk; disaster prevention, preparedness and response; early warning systems for various climate change impacts.
- redouble its efforts for sustainable and equitable development through meeting of international commitments on development assistance; continued economic growth in developing countries, and financial and technological support towards a low-carbon path.
- anticipate and prepare for unprecedented challenges beyond existing mechanisms through
  - climate-induced displacement and migration beyond existing legal protective regimes;
  - 'statelessness' of citizens of SIDS and impacts on sovereignty, claims over marine resources, and rights and relocation of their citizens;
  - prospect of water scarcity and stress for millions due to melting of glaciers and snow pack.
  - prospect of competition over newly accessible Arctic natural resources and trade routes.

32 See UNEP Press Release on "'Global Green New Deal' – Environmentally-Focused Investment Historic Opportunity for 21st Century Prosperity and Job Generation" of 22 October 2009; at: <http://www.unep.org/ Documents.Multilingual/Default.Print.asp?documentid=548&articleid=5957&l=en>.

The Report of the Secretary-General (2009) further argued that

> Climate change can only be tackled at a global level with the UNFCCC as the central negotiating body. This requires increased policy coherence and cooperation within the UN system and with other relevant organizations with the goal to enhance its capacity to respond to increased climate-induced disasters and humanitarian crises. Furthermore, research is needed on causal pathways and conditioning factors to better explain why, in different situations, similar physical impacts of climate change may have very different implications for human well-being and security.
>
> Without doubt, the process of negotiation of existing and resulting conflicts is key in this process, and from the peaceful resolution of controversies depends the success of the proposed measures.

95.5.5 Proactive Strategies for Coping with GEC and Hazards

While many reports have convincingly argued that reactive policies are suboptimal (MA 2005) and more costly (Stern 2006, 2009; UNEP 2007) and that proactive policies will in the long run be cheaper and less violent, the impact of this new insight in declaratory politics on the needed bold policy decisions has so far been minimal, as the failure of the agricultural summit in November 2009 in Rome and of the climate conference in December 2009 in Copenhagen have shown. So far the securitization of climate change by upgrading it to an issue of 'utmost importance' has not resulted in the 'extraordinary measures' that are needed for coping with GEC and climate change by avoiding major humanitarian tragedies and complex emergencies which the Earth and global politics may increasingly face during this century.

95.6 Sustainable Development, Security, and Peace in the Anthropocene

The 'Fourth Green Revolution' proposed in this chapter requires radical changes in the four key elements of peace, security, development and environment, including deep transformations in the daily habits, beliefs and social representations, but also in the power structure at the international, national, and local levels. The prevailing worldview of the elites and of the people who are often manipulated by the mass media, and also the mindsets of policy-makers and their advisers must drastically change. The threats of GEC require anticipatory learning, resilience building, and preventive mitigation with proactive conciliation processes to get prepared for future non-linear and complex emergencies.

While the 1987 Brundtland Report suggested the sustainable development concept as a new development path, the call for a sustainable security and a sustainable peace policy suggests a fundamental change in the conceptual thinking on international relations and eventually in the practice among countries during the Anthropocene era of earth and human history. In the scientific realm the proposed political geoecology (chap. 94 by Brauch/Dalby/Oswald Spring) is to link the disparate worlds of the rapidly emerging Earth Systems science with the discourses on global earth governance by integrating the political and security dimensions into natural sciences research as well as by sensitizing the social sciences and the humanities on ongoing research in the natural sciences.

This call for 'consilience' (Wilson 1998b) requires complementing the progressing trend of overspecialization in the scientific world with a holistic concern for the linkages between the Earth and the Human Systems. The suggested 'Fourth Green Revolution" after the agricultural, industrial, and communication revolutions is a huge undertaking that has become necessary as a result of the human interventions and changes in the Earth System and its future unpredictable and complex reactions humankind may face and will have to cope with during the Anthropocene.

Changes in the Earth System and the inescapable consequences put humankind in a predicament: We know that our actions put our survival at risk but due to short-term profit thinking we do not seem to have to change our behaviour and to avert the destruction of our planet. Even if the survival of the present generation is probably not at stake, that of future generations will be. This should be sufficient motive for a radical cultural change in all the spheres of production, circulation, and consumption processes. This requires that we all must act now and avoid postponing needed decisions to the next generation to cope then with more severe challenges and more costly impacts of global environmental change.

Abbreviations

A1B	One of the IPCC SRES scenarios
ABM	anti-ballistic missile
AA	Auswärtiges Amt [Federal Ministry for Foreign Affairs, Germany]
ACOTA	African Contingency Operations Training Assistance
ACRS	Arms Control and Regional Security
ACSAD	Arab Center for the Studies of Arid Zones and Dry Lands
ACSYS	Arctic Climate System Study
ACUNU	American Council for the United Nations University
AD	anno domini [after Christ]
ADAM	Adaptation and Mitigation Strategies: Supporting European Climate Policy (EU funded project)
ADB	Asian Development Bank
ADRC	Asian Disaster Reduction Centre
AESI	Asociación Española de Ingeniría Sísmica [Association for Earthquake Engineering of Spain]
AfD	African Development Bank
AFD	Agence Française de Développement
AFED	Arab Forum on Environment and Development
AFES-PRESS	Arbeitsgruppe Friedensforschung und Europäische Sicherheitspolitik – [Peace Research and European Security Studies]
AFP	Agence France Presse (French Press Agency)
AGO	Agor Gauchar Oran
AGRHYMET	AGRronomy HYdrology METeorology: Regional Centre for training and application in agrometeorology and operational hydrology
AGRHYMET	CILSS body on agronomy, hydrology and meteorology in Niamey (Niger)
agroBIO-DIVERSITY	DIVERSITAS Cross-cutting Network on relationships between biodiversity and agriculture
AGY	Adarsh Gaon Yojana (way towards Gandhi's dream village)
AIA	Advanced Informed Agreement (in the context of the Cartagena Protocol on Biosafety (2000) to the CBD (1992))
AIACC	Assessments of Impacts and Adaptations to Climate Change (in Multiple Regions and Sectors)
AIDS	Acquired Immunodeficiency Syndrome
AIMES	IGBP's Analysis, Integration and Modelling of the Earth System project
AIP	American Institute of Physics
AIS	Asociación Colombiana de Ingeniería Sísmica [Colombian Association for Earthquake Engineering]
AKOM	Afet Koordinasyon Merkezi [Istanbul Metropolitan Municipality Disaster Coordination Centre]
AKP	Adalet ve Kalkinma Partisi [Justice and Development Party]
AKUF	AG Kriegsursachenforschung [Study Group on the Causes of War] (at Hamburg University)
AL	Arab League
AMMA	African Monsoon Multidisciplinary Analysis Project
AMU	Arab Maghreb Union
An. 1	Annex 1 countries (under UNFCCC)
An. B	Annex B countries (under Kyoto Protocol)
ANAP	Anavatan Partisi [Motherland Party]
ANU	Australian National University
AOSIS	Alliance of Small Island States
AP3A	Early Warning and Agricultural Productions Forecasting, project of AGRHYMET
APEC	Asia-Pacific Economic Cooperation
APHES	Assessing Public Health in Emergency Situations
API	Annual Population Increase
APIICL	Andhra Pradesh (one of 27 States in India) Industrial and Investment Corporation Limited
APN	Arab Group for the Protection of Nature
APN	Asia-Pacific Network for Global Change Research
AR4	Fourth Assessment Report of the IPCC released in 2007
ARC	Australian Research Council
ARC	American Red Cross
ARC/INFO	(ESRI GIS software)
ArcGIS	Arc Geographic Information System (computer software)
ARIJ	Applied Research Institute, Jerusalem
ASEAN	Association of Southeast Asian Nations
ATOL	Assembling the Tree of Life (project)
ATT	Arms Trade Treaty
AU	African Union
AUS	American University of Sharjah
AYM	Afet Yönetim Merkezi [Istanbul Governorship Disaster Management Centre]
B.U.	Boğaziçi University
BADEA	Arab Bank for Economic Development in Africa
BAHC	Biospheric Aspects of the Hydrologic Cycle

H.G. Brauch et al. (eds.), *Coping with Global Environmental Change, Disasters and Security*, Hexagon Series on Human and Environmental Security and Peace 5, DOI 10.1007/978-3-642-17776-7, © Springer-Verlag Berlin Heidelberg 2011

BAP	Budget Allocation Process
BASIC	Brazil, South Africa, India, China
BBC	(model developed by) Bogardi, Birkmann and Cardona
BCM	billion cubic meters (volume unit)
BCM/yr	billion cubic meters per year (yield or capacity unit)
BCPR	Bureau for Crisis Prevention and Recovery of UNDP
BECC	Border Environment Cooperation Commission (of NAFTA)
BID	Banco Interamericano de Desarrollo [Inter-American Development Bank]
BiH	Bosnia-Herzegovina
bio-DISCOVERY	DIVERSITAS Core Project on assessing and monitoring current biodiversity, and understanding and predicting its change
bioGENESIS	DIVERSITAS Core Project on documenting biodiversity, its diversification, and the effects of human-induced changes
bioSUSTAINABILITY	DIVERSITAS Core Project on finding ways to support conservation and sustainable use of biodiversity
BJP	Bharatiya Janata Party (national political party in India)
BMD	Ballistic Missile Defence
BMU	Bundesministerium für Umwelt, Naturschutz und Reaktorsicherheit [Federal Ministry on the Environment, Nature Conservation and Nuclear Safety, Germany]
BMVg	Bundesministerium der Verteidigung [Federal Ministry of Defence, Germany]
BMZ	Bundesministerium für Wirtschaftliche Zusammenarbeit und Entwicklung [Federal Ministry for Economic Cooperation and Development, Germany]
BOLI	Barcode of Life Initiative
BRIC	Brazil, Russia, India, China
BSE	Bovine Spongiform Encephalopathy
Bt	Bacillus turengiensis
BU	Boğaziçi Üniversitesi [Boğaziçi University]
C	coping
C	degree of Celsius
c	capita
C&C	contraction and convergence
C^3	Command, control, communications
CABI	Centre for Agriculture and Biosciences International
CAMRE	Council of Arab Ministers Responsible for the Environment
CAP	Common Agricultural Policy
CAPMAS	Central Agency for Public Mobilization and Statistics
CARE	Child Care Aware
CARICOM	Caribbean Common Market
CAS	complex adaptive systems
CBD	Convention on Biological Diversity
CBMs	Confidence Building Measures
CBN	Central Bank of Nigeria
CBO	community based organization
CBOL	Consortium for the Barcode of Life
CCA	climate change adaptation
CCAD	Comisión Centroamericana de Medio Ambiente y Desarrollo [Central American Commission on Environment and Development]
CCAFS	(Challenge programme) Climate Change, Agriculture and Food Security
CCC	Greenhouse scenario simulation model developed by the Canadian Centre for Climate
CCCCC	Caribbean Community's Center for Climate Change
CCEMA	Climate Change, Environment and Migration Alliance
CCIS	Climate Change and International Security
CCS	Carbon Capture and Storage
CCS	Consortium of Insurance Compensation
CD	Compact Disc
CD	Conference on Disarmament
CDC	Centres for Disease Control and Prevention
CDC	common-but-differentiated convergence
CDERA	Caribbean Disaster Emergency Response Agency
CDM	Clean Development Mechanism
CDP	Center for Disaster Preparedness
CDRN	Citizens' Disaster Response Network
CEC	Commission for Environmental Cooperation (of NAFTA)
CE-DAT	Complex Emergency Database
CEDAW	Committee on the Elimination of Discrimination against Women
CEDEAO	Communauté Économique des États de l'Afrique de l'Ouest [Economic Community of West African States]
CEDERI	Centro de Estudios sobre Desastres y Riesgos (de la Universidad de los Andes, Bogotá) [Centre of Studies on Disasters and Risks, University of the Andes, Bogota, Colombia]
CEDIM	Center of Disaster Management and Risk Reduction Technologies, Karlsruhe University
CEE/EEC	European Economic Community
CEHA	Centre for Environmental Health Activities
CEN	Caribbean Environment Network
CENAPRED	Centro Nacional de Prevención de Desastres [National Centre for the Prevention of Disasters, Mexico]
CENTED	Centre for Technology, Environment, and Development (Clarke University)
CEP	Caribbean Environmental Programme
CEPAL	Comisión Económica para América Latina y el Caribe [Economic Commission for Latin America and the Caribbean]
CEPS	Centre for European Policy Studies (think tank, Brussels, Belgium)

CERDI	Centre d'Études et de Recherches sûr le Développement International
CESR	Center for Economic and Social Rights
CEW	conflict early warning
CEWARN	Conflict Early Warning and Response Network
CF_2Cl_2	Dichlorofluorocarbon
$CFCl_3$	Trichlorofluorocarbon
CFCs	chlorofluorocarbons
CFE	Treaty on Conventional Armed Forces in Europe (signed on 19 November 1990)
CFSP	Common Foreign and Security Policy (European Union)
CGCF	Copenhagen Green Climate Fund
CGIAR	Consultative Group on International Agricultural Research
CH_4	methane
CHP	Cumhuriyet Halk Partisi [Republican People's Party]
CHS	Commission on Human Security
CI	Critical Infrastructure
CI	Continental intercalaire
CIA	Central Intelligence Agency of the United States of America
CIBIOGEM	Comisión Intersecretarial de Bioseguridad y Organismos Genéticamente Modificados [Intersectoral Commission of Biosecurity and Genetic Modified Organisms]
CIE	Centro de Información Estadística [Statistics Information Centre]
CIEMAT	Centro de Investigaciones Energéticas, Medioambientales y Tecnológicas [Centre for the Study of Energy, Environment and Technology]
CIL	Coal Industries Limited
CILSS	Comité Permanent inter Etats de Lutte Contre Secheresse dans le Sahel [Permanent Interstate Committee for Drought Control in the Sahel]
CIMNE	Centro Internacional de Métodos Numéricos en Ingeniería (de la UPC, Barcelona) [International Centre of Numerical Methods in Engineering, UPC, Barcelona]
CIS	Commonwealth of Independent States
CLAIP	Latin American Council on Peace Research
CliC	Climate and Cryopshere
CLIVAR	Climate Variability and Predictability
cm	centimetre (length unit)
CM	Coupled Modelling
cm/yr	centimetre per year (velocity unit)
CMP	Conference of Member Parties to the Kyoto Protocol
CNA	Comisión Nacional del Agua [National Commission for Water, Mexico]
CNA	Center for Naval Analysis
CNAS	Center for a New American Security
CNRS	Centre national de la recherche scientifique (France)
CO_2	carbon dioxide
CO_2e	carbon dioxide equivalent
CONABIO	Comisión Nacional de la Biodiversidad [National Commission on Biodiversity, Mexico]
CONAM	National Environmental Council (Peru)
CONAPO	Consejo Nacional de Población [National Population Council]
CONAZA	Comisión Nacional de Zonas Aridas [National Commission of Arid Zones]
Congress party	(national political party in India)
COP	Conference of Parties (of an international environmental regime, e.g. of UNFCCC)
COWI	Consulting Engineers and Planners (consultancy form, Denmark)
CPACC	Caribbean Planning for Adaptation to Global Climate Change
CPCB	Central Pollution Control Board
CPIA	Country Policy and Institutional Assessment (World Bank)
CPTEC	Centro de Previsao de Tempo e Estudos Climaticos (Brazil)
CRED	Centre for Research on the Epidemiology of Disasters (Université Catholique de Louvain, Belgium)
CRIC	Committee for the Review of the Implementation (of UNCCD)
CRU	Climate Research Unit (University of East Anglia, UK)
CSIRO	(Australia's Commonwealth) Scientific and Industrial Research Organisation
CSIS	Center for Strategic and International Studies
CSP	Concentrated Solar Power
CSSCR	Center for Security Studies and Conflict Research
CST	Committee for Science and Technology (of UNCCD)
CSTO	Collective Security Treaty Organization
CT	Continental Terminal
CTBT	Comprehensive Nuclear Test Ban Treaty
CTF	Clean Technology Fund
CTR	Cooperative Threat Reduction Program
CUBEC	Centro Universitario Europeo per i Beni Culturali, Ravello [European University Centre for Cultural Heritage]
CVA	Capabilities and Vulnerability Analysis
CWD	Coarse woody debris
CZM	Coastal Zone Management
d	day
D/CEW	Disaster and Conflict Early Warning
D3E	(Centre for Development, Economy, Ecology and Equity, Porto Alegre, Brazil, established by the World Social Forum)
DAC	Development Assistance Committee
DALY	Disability Adjusted Life Years

DANE	Departamento Administrativo Nacional de Estadística [National Administrative Departmentt of Statistics]
DASK	Doal Afet Sigorta Kurumu [Turkish Catastrophe Insurance Pool]
DCB	Delhi Cantonment Board
DCS	Department of Census and Statistics
DDA	Delhi Development Authority
DDC	Drylands Development Centre (of UNDP)
DDP	Dryland Development Paradigm
DDPG	Draft Defense Planning Guidance
DDR	Disarmament, Demobilization and Reintegration
DDT	Dichloro-Diphenyl-Trichloroethane
DEHAP	Demokratik Halk Partisi (Democratic People's Party)
DEM	digital elevation model
DEP	Demokrasi Partisi (Democracy Party)
DESA	Department of Economic and Social Affairs (United Nations)
DESD	Decade of Education for Sustainable Development
DESERTEC	(Concept for generating electricity in the deserts of the MENA region)
DEW	disaster early warning
DEWA	Division of Early Warning and Assessment (UNEP)
DFID	Department for International Development (UK)
DFO	Dartmouth Flood Observatory
DG	Directorate General (European Commission)
DG Relex	Directorate General, External Relations (European Commission)
DHA	Department of Humanitarian Affairs
DHI	Danish Hydrological Institute (Denmark)
DHS	Department of Homeland Security
DIAPER	Permanent Diagnosis (project of AGRHYMET)
Diconsa	Distribuidora e Impulsora Comercial Conasupo [Commercial Distribution and Promotion of Conasupo] (a governmental commercial body for food distribution for marginal people)
DIHMA	Departamento de Ingeniería Hidráulica y Medio Ambiente (Universidad Politécnica de Valencia) [Department of Hydraulic Engineering and Environment, Polytechnic University of Valencia]
Dii	Desertec Industrial Initiative
DIS	Data and Information Service
DIVERSITAS	(international research programme on biodiversity science)
DJB	Delhi Jal Board
DJF	December, January, February (northern hemisphere winter season)
DLDD	Desertification, Land Degradation and Drought
DLR	Deutsche Gesellschaft für Luft- und Raumfahrt [German Aerospace Establishment]
DM	Disaster Mitigation
DMI	Disaster Mitigation Institute
DNA	DeoxyriboNucleic Acid
DNAs	Designated National Authorities
DNPAD	Dirección Nacional de Prevención y Atención de Desastres (Colombia) [National Directorate of Disaster Prevention and Attention]
DoD	Department of Defense
DPAD	Dirección para la Prevención y Atención de Desastres (del Ministerio del Interior, Bogotá) [Disaster Prevention and Attention Directorate of Interior Ministry, Bogota, Colombia]
DPG	Defense Planning Guidance
DPJ	Democratic Party of Japan
DPT	Devlet Planlama Tekilat [Turkey's State Planning Organization]
DRC	Desert Research Center (Egypt)
DRC	Democratic Republic of Congo
DRF	Debt Reduction Facility
DRI	Disaster Risk Index
DRM	disaster risk management
DRR	disaster risk reduction
DRU	Disaster Response Unit
DSAs	Debt Sustainability Analyses
DSP	Demokratik Sol Parti [Democratic Left Party]
DSSAT	Decision Support System for Agrotechnology Transfer
DTP	Demokratik Toplum Partisi [Democratic Society Party]
DYP	Doru Yol Partisi [True Path Party]
E. Coli	Escheriquia Coli
EAC	East Africa Community
EACHFOR	(EU-funded research project on forced migration)
EAS	Eastern Aquifer System
EAW	European Arrest Warrant
EC	European Community
EC	European Commission
ECHAM4	(atmospheric general circulation model by the Max Planck Institute for Meteorology, Hamburg, Germany)
ECHO	European Commission's Humanitarian Aid Office
ECLAC	Economic Commission for Latin America and the Caribbean
ecoHEALTH	(DIVERSITAS Cross-cutting Network on relationships between plant and animal biodiversity and (re)emergence of infectious diseases and the consequences for wild biodiversity and human societies)
ECOMICI	ECOWAS Mission in Cote d'Ivoire

ECOMOG	Economic Community of West African States' Monitoring Group
ecoSERVICES	(DIVERSITAS Core Project on relationships between biodiversity and ecosystem functioning and services)
ECOSOC	Economic and Social Council (United Nations)
ECOWAS	Economic Community of West African States
EDI	Economic Diversification Index
EDRI	(Urban) Earthquake Disaster Risk Index
EEA	European Environment Agency
EEC	European Economic Community
EEI	equal emissions improvement per GDP
EEOC	Equal Employment Opportunity Commission
EERI	Earthquake Engineering Research Institute
EEZ	Exclusive Economic Zone
EFP	European foreign policy
EGTT	Expert Group on Technology Transfer
EHCAM5	Max Planck Institut für Meteorologie, model version 5
EHS	Institute for Environment and Human Security (United Nations University)
EIA	environmental impact assessment
EIB	European Investment Bank
EM(-)DAT	Emergency Disasters Database (of the Centre for the Epidemiology of Disasters of Catholic University of Lovain, Brussels)
EMAA	Euro-Mediterranean Association Agreement
EMCCF	Euro-Mediterranean Climate Change Framework
EMI	Earthquakes and Megacities Initiative
EMP	Euro-Mediterranean Partnership
EMS	European Macro-Seismic Scale
EMS	Eosinophilia-Myalgia Syndrome
EMSA	European Maritime Safety Agency
ENAC	Estrategia Nacional de Cambio Climático [National Strategy on Climate Change]
ENCOP	Environment and Conflicts Project
ENN	Environmental News Network
ENP	European Neighbourhood Policy
ENSEMBLES	Ensemble-based predictions of climate changes and their impacts (a European Commission-funded project developed to quantify the uncertainty in long-term predictions of climate change)
ENSO	El Niño-Southern Oscillation
ENVSEC	Environment Security Initiative (OSCE, UNEP, UNDP, NATO)
EOL	Encyclopedia of Life
EOLSS	Encyclopaedia of Life Support Systems (UNESCO)
EPA	Environment Protection Agency (USA)
EPB	Environmental Protection Bureaus
EPI	Environmental Performance Index
EQA	Environmental Quality Authority
ERC	Environmental Research Centre
ERN	Evaluación de Riesgos Naturales (Consorcio de Ingenieros Consultores) [Bogotá Natural Risk Evaluation, Consortium of Engineering Consultants]

GCC	global climate change
GCCA	Global Climate Change Alliance
GCIM	Global Commission on International Migration
GCM	global circulation model
GCOS	Global Climate Observing System
GCP	Global Carbon Project (ESSP project)
GCTE	Global Change and Terrestrial Ecosystems
GDP	Gross Domestic Product
GEC	Global Environmental Change
GECAFS	Global Environmental Change and Food Systems (ESSP project)
GECHH	Global Environmental Change and Human Health
GECHS	Global Environmental Change and Human Security
GEF	Global Environment Facility
GEHSHA	Global Environmental and Human Security Handbook for the Anthropocene
GEI	Gender Equity Index
GEI	Green Economy Initiative
GEO	Global Environmental Outlook (UNEP)
GEO BON	Group on Earth Observations Biodiversity Observation Network
GEWEX	Global Energy and Water and Experiment
GFDL CM2.0	Geophysical Fluid Dynamics Laboratory, Model version CM2.0
GFDL-R30	Greenhouse scenario simulation model
MODEL	(developed by NOAA's Geophysical Fluid Dynamics Laboratory)
GFDLT	(one of the Global Circulation Models)
GGAVATT	Grupo Ganadero para la Validación y Transferencia de Tecnología [Livestock producers group for transferring and validating technology]
GHG	greenhouse gas
GHI	Global Hunger Index
GINI	(index on income inequality of UNEP)
GIS	Geographic Information System
GISP	Global Invasive Species Programme
GISPRI	Global Industrial and Social Progress Research Institute
GLADA	Global Assessment of Land Degradation and Improvement
GLASOD	Global Assessment of Human Induced Soil Degradation
GLOBEC	Global Ocean Ecosystem Dynamics
GLOCHA-MORE	Global Change in Mountain Regions Programme
GLOWA	Globaler Wandel des Wasserkreislaufs [Global Change of the Water Cycle]
GLP	Global Land Project (IHDP research project)
GM	Global Mechanism (UNCCD)
GM	Genetically modified
GMBA	Global Mountain Biodiversity Assessment
GmbH	[limited liability company]
GMEF	Global Ministerial Environment Forum
GMEI	Greater Middle East Initiative
GMFA	Greece Ministry of Foreign Affairs
GMOs	Genetically Modified Organisms
GMP	Global Mediterranean Policy
GMP	Genetically modified products
GNI	Gross National Income
GNP	Gross National Product
GOE	Government of Egypt
GOESS	Geostationary Operational Environmental Satellite System
GOI	Government of India
GOOS	Global Ocean Observing System
GRAVITY	Global Risk and Vulnerability Index
GRC	Gulf Research Center
GRID	Global Resource Information Database
GSPC	Groupe Salafiste pour la Prédication et le Combat [Salafist Group for Preaching and Combat]
GTI	Global Taxonomy Initiative
GTOS	Global Terrestrial Observing System
GTZ	Gesellschaft für Technische Zusammenarbeit [German Agency for Technical Cooperation]
GUH	Geomorphologic Unit Hydrograph
GURT	Genetic use restriction technologies
GVA	Gross Value Added
GWES	Groundwater for Emergency Situations
GWh	giga watt hour
GWMDFZ	Gulf Weapons of Mass Destruction Free Zone
GWP	Global Water Partnership
GWP	global warming potential
GWSP	Global Water System Project (ESSP)
H	hazard
HadCM3 models	(climate change scenario of the Hadley Centre in the UK)
HADEP	Halkin Demokrasi Partisi [People's Democracy Party]
HADGEM1	Hadley Centre for Climate Prediction and Research, Model version GEM1
HAZUS	Hazard United States Loss Estimation Tool

HBF	Heinrich Boell Foundation
HBS	Harvard Business School
HCFCs	Hydrochlorofluorocarbons
HDI	Human Development Index
HDP	Human Dimension of Global Environmental Change Programme
HDR	Human Development Report
HDRI	Hurricane Disaster Risk Index
HELCOM	Helsinki Convention on the Protection of the Marine Environment of the Baltic Sea
HELP	Hydrology for Environment, Life and Policy
HEP	Halkin Emek Partisi [People's Labour Party]
HFA	Hyogo Framework for Action
HFCs	hydrofluorocarbons
HH	His Highness
HHI	Harvard Humanitarian Initiative
HHWS	Heat Health Warning Systems
HIES	Household Income and Expenditure Survey
HIIK	Heidelberg Institute für Internationale Konfliktforschung [Heidelberg Institute for International Conflict Research Heidelberg University, Germany]
HIPC	Heavily Indebted Poor Countries
HIV	Human Immunodeficiency Virus
HIV/AIDS	Human Immunodeficiency Virus – Acquired Immunodeficiency Syndrome
HP	Historical (or Mandate) Palestine
HRH	His Royal Highness
HRW	Human Rights Watch
HSN	Human Security Network
HUGE	human, gender, and environmental security (concept developed by Úrsula Oswald Spring)
HVDC	high-voltage direct currents
HVRI	Hazards & Vulnerability Research Institute (USA)
I=PAT formula	Impact = Population – Affluence – Technology
IAEA	International Atomic Energy Agency
IAI	Inter-American Institute (for Global Change Research)
IAI	Inter-American Institute (for Weather Change)
IAM	Integrated Assessment Modelling
IAP	Initial action plan
IARU	International Alliance of Research Universities
IAS	Iullemeden Aquifer System (project)
IASC	Inter-Agency Standing Committee
IASFM	International Association for the Study of Forced Migration
IAV	Impacts, Adaptation, and Vulnerability
IBA	Important Bird Area
IBB	Istanbul Büyük ehir Belediyesi [Istanbul Metropolitan Municipality]
ICAC	International Global Atmospheric Chemistry
ICACGP	International Commission on Atmospheric Chemistry and Global Pollution
ICARDA	International Center for Agricultural Research in the Dry Areas
ICBM	Intercontinental Ballistic Missile
ICG	International Crisis Group
ICJ	International Court of Justice
ICL	Institute for Catastrophic Loss Reduction (Toronto/London, Canada)
ICNND	International Commission for Nuclear Nonproliferation and Disarmament
ICPAC	IGAD's Climate Prediction and Assessment Center
ICRC	International Committee of the Red Cross
ICRG	International Country Risk Guide
ICSU	International Council for Science
ICSU-IGFA	International Council for Science - International Group of Funding Agencies for Global Change Research
ICT	Information and Communications Technology
ICTP	International Centre for Theoretical Physics
ICWC	Interstate Commission for Water Coordination
ICZM	Integrated Coastal Zone Management
ID	Institutional Discrimination
IDA	International Development Association
IDB	Inter-American Development Bank
IDEA	Instituto de Estudios Ambientales (de la UNC, Manizales) [Institute of Environmental Studies]
IDEAM	Instituto de Hidrología, Meteorología y Estudios Ambientales [Institute of Hydrology, Meteorology and Environmental Studies]

INVS	Institut de Veille Sanitaire
IOC	Intergovernmental Oceanographic Commission
IOM	International Organization for Migration
IP	Ionides Plan
IPAT	Impact, Population, Affluence, Technology
IPBES	Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services
IPCC	Intergovernmental Panel on Climate Change
IPCC -TGICA	Intergovernmental Panel on Climate Change - Task Group on Data and Scenario Support for Impact and Climate Assessment
IPCRI	Israel-Palestine Center for Research and Information
IPICYT	Instituto Potosino de Investigación Científica y Tecnológica, Mexico
IPO	International Project Office
IPOGEA	Research Centre on Local and Traditional Knowledge
IPR	Intellectual Property Rights
IPRA	International Peace Research Association
IPU	Inter-Parliamentary Union
IR	Incidence rate
IRDR	Integrated Research on Disaster Risk
IRENA	International Renewable Energy Agency
IRG	Integrated Risk Governance
IRI	International Research Institute for Climate and Society
IRIN	Integrated Regional Information Networks
IRS	Integrated Regional Study
IRSW	internal renewable surface water
ISA	International Studies Association
ISAAA	International Service for the Acquisition of Agri-Biotech Applications
ISAF	International Security Assistance Force (in Afghanistan)
ISBR	International Society for Biosafety Research
ISCC	integrated solar combined cycle

ISDR	International Strategy for Disaster Reduction (United Nations)
ISFH	Institut für Friedensforschung und Sicherheitspolitik an der Universität Hamburg [Institute for Peace Research and Security Studies at the University Hamburg]
ISI	Institute for Scientific Information
ISO	International Standardization Organization
ISRIC	International Soil Reference and Information Centre
ISS	Institute for Security Studies (Pretoria, South Africa; Nairobi, Kenya)
ISSC	International Social Science Council
ISW	Israeli Segregation Wall
IT	Information Technology
IT	Industrial Transformation (IHDP Research Project)
ITCP	Integrated Territorial Climate Plans
ITDG	Intermediate Technology Development Group
IUBS	International Union of Biological Sciences
IUCN	International Union for the Conservation of Nature (World Conservation Union)
IUED	Institut Universitaire d'Etudes du Développement [Institute for Development Studies, University of Geneva]
IUGS	International Union of Geological Sciences
IUMS	International Union of Microbiological Societies
IWHR	Institute of Water Resources and Hydropower Research (Beijing, PRC)
IWRM	Integrated Water Resource Management
IWTC	International Water Technology Conference
IYDD	International Year of Deserts and Desertification (UNCCD)
IYPE	International Year of Planet Earth
IZIIS	Institute of Earthquake Engineering and Engineering Seismology (Skopje, Former Yugoslav Republic of Macedonia)
JBF	Jal Bhagirathi Foundation (Jodhpur, India)
JCS	Joint Chiefs of Staff (USA)
JDEC	Jerusalem District Electricity Company
JGOFS	Joint Global Ocean Flux Study
JHA	Justice and Home Affairs
JI	Joint Implementation
JICA	Japan International Cooperation Agency
JJ	Jhuggi Jhompri
JJA	June, July, August (northern hemisphere summer season)
JMCC	Jerusalem Media and Communication Center
JP	Joint Programme on Climate Change Risk Management (Egypt)
JRB	Jordan River Basin
JP	Johnston Plan
JRC	Joint Research Centre (European Commission)
JSC	Joint Scientific Committee
JWC	Joint Water Committee
KBR	Subsidiary of the Transnational Halliburton
KFOR	Kosovo Force
KfW	Kreditanstalt für Wiederaufbau (German Public Development Bank)
KHK	Kanun Hukmunde Kararname [Decree]
KIMA	Egyptian Chemical Industries (company)
KP	Kyoto Protocol
kwh	kilo-watt-hour (electricity consumption unit)
l	litre
l/c/d	Litre per capita (person) per day
l/h	litre per hour (flow velocity unit)
l/s	litre per second (flow velocity unit)
LA RED	Red de Estudios Sociales en Prevención de Desastres en América Latina [Latin American Network of Social Studies on Disaster Prevention]
LAS	League of Arab States
LASEPA	Lagos State Environmental Protection Agency (Nigeria)
LCA	Life Cycle Assessment
LDCF	Least Developed Countries Fund (UNFCCC)
LDCs	less developed countries
LDP	Liberal Democratic Party (Japan)
LEWS	Livestock Early Warning System
LGA	Local Government Areas (Nigeria)
LICs	Low-income countries
LICUS	Low-Income Countries Under Stress
LINKS	Local and Indigenous Knowledge Systems
LMO	Living Modified Organisms
LOICZ	Land Ocean Interactions in the Coastal Zone Project (IHDP research project)
lpcd	litres per capita per day
LSE	London School of Economics and Political Science (London, UK)
LTMs	Long Term Missions (OSCE)
LTTE	Liberation Tigers of Tamil Eelam
LUCC	Land-Use and Land-Cover Change (research project of IHDP and IGBP)
LULUC	land use and land use change
LURD	Liberians United for Reconciliation and Democracy
LVI	Livelihood Vulnerability Index
LVI	Local Vulnerability Index
m^3	cubic metre
m^3/yr	cubic metre per year (consumption unit)
MA	Millennium Ecosystem Assessment
MAB	Man and the Biosphere Programme (UNESCO)
MAB	Mountain Aquifer Basin
MAC	marginal abatement costs
MACC	Mainstreaming Adaptation to Climate Change
MAD	Mutual Assured Destruction

MAFF	Ministry of Agriculture, Forestry and Fisheries
MAIRS	Monsoon Asia Integrated Regional Study (ESSP)
MAM	March, April, May
MARM	National Ministry of Rural and Marine Environment
MASSOB	Movement for the Actualization of the Sovereign State of Biafra
MAVDT	Ministerio de Ambiente, Vivienda y Desarrollo Territorial (de Colombia) [Ministry of Environment, Housing and Territorial Development]
MC 14/3	NATO's Military Committee Document 14/3 (1967)
MC 48	NATO's Military Committee Document 48 (strategy of flexible response, 1957)
MCD	Municipal Corporation of Delhi
MCH	Municipal Corporation of Hyderabad
MCM	million cubic metres
mcm/yr	million cubic metres per year
MD	Millennium Development
MDGs	Millennium Development Goals
MDRI	Multilateral Debt Relief Initiative
ME	Middle East
MEA	Millennium Ecosystem Assessment
MEAs	Multilateral Environmental Agreements
MEDA	Mediterranean Economic Development Assistance
MEDENER	Mediterranean Association of National Energy Agencies
MED-EUWI	Mediterranean-European Water Initiative
MEDREC	Mediterranean Renewable Energy Centre
MEDSEC	Mediterranean Security Initiative
MEDU	Co-ordinating Unit for the Mediterranean Action Plan (UNEP)
MEH-SEC	Mediterranean Environmental and Human Security Initiative
MENA	Middle East and North Africa
MEND	Movement for the Emancipation of the Niger Delta
MEPI	Middle East Partnership Initiative
MERIP	Middle East Research and Information Project
METI	Ministry of Economy, Trade and Industry (Japan)
MEWS	Malaria Early Warning System
MEXT	Ministry of Education, Culture, Sports, Science and Technology
MFDC	Movement of Democratic Forces of Casamance
MGD	million gallons per day
Mha	millions of hectares
MHP	Milliyetci Hareket Partisi [Nationalist Action Party]
MICs	Middle-income countries
MIT	Massachusetts Institute of Technology
MJP	Ivory Coast Patriotic Movement
MLD	million litres per day
MLF	Montreal Protocol on Substances that Deplete the Ozone Layer
mm	millimetre (length unit)
mm/yr	millimetre per year (velocity unit)
MMA	National Ministry of Environment (in 2008 changed to MARM National Ministry of Rural and Marine Environment)
MMO	Mediterranean Migration Observatory (Panteion University, Athens)
MMR	Maternal Mortality Ratio
MMTS	Multi Modal Transportation System
MNC	multinational corporations
MNE	multinational enterprises
MODIS	Moderate Resolution Imaging Spectroradiometer
MOE	Ministry of Environment (Japan)
MoEnv	Ministry of Environment
MOFA	Ministry of Foreign Affairs (Japan)
MoH	Ministry of Health
MOP	Meeting of Parties (of Kyoto Protocol)
MOSOP	Movement for the Survival of Ogoni People
MOST	Management of Social Transformations Programme
MPCI	Mouvement Patriotique de Cote d'Ivoire [Patriotic Movement of Ivory Coast]
MPI	Max Planck Institute
MPIGO	Mouvement Populaire Ivorie du Grand Ouest [Ivorian Popular Movement of the Great West]
MRF	MunichRe Foundation
MRF Chair	Munich Re Foundation's Chair on Social Vulnerability
MRU	Mano River Union
MS	member states (European Union)
MSC	Mediation and Security Council
MSP	Mediterranean Solar Plan
MST	Movimento dos Trabalhadores Rurais Sem Terra [Brazil's Landless Rural Workers' Movement]
Mt	megatonne
Mtce	million tons of coal equivalent
MTI	Marine Trophic Index
MunichRe	Munich Reinsurance Company
MWR	Ministry of Water Resources
MWRI	Ministry for Water Resources and Irrigation (Egpt)
NA	North Africa
N, P, K	nitrogen, phosphor, potassium
N_2O	nitrous oxide
NAAEC	North American Agreement on Environmental Cooperation
NAFDAC	Nigerian National Food, Drug Administration and Control
NAFTA	North American Free Trade Agreement (USA, Canada, Mexico)
NAMAs	National Appropriate Mitigation Actions
NAP	National Action Plans (UNCCD)
NAPAs	National Adaptation Plans of Action

NAPs	National Allocation Plans
NAPs	national action programmes
NARCCAP	North American Regional Climate Change Assessment Program
NASA	National Aeronautics and Space Administration
NATO	North Atlantic Treaty Organization
NBC	nuclear, biological and chemical (weapons, threat)
NBI	Nile Basin Initiative
NC	National Communications
NCCCC	National Coordination Committee for Climate Change
NCCR/NS	National Centre for Competence in Research, North-South (Switzerland)
NCDHR	National Campaign for Dalit Human Rights
NCLR	National Council of la Raza
NCT	National Capital Territory
NCZ	North Coastal Zone (Egypt)
NDMC	National Disaster Management Centre
NDMC	New Delhi Municipal Corporation
N-EAS	North-Eastern Aquifer System
NEDO	New Energy and Industrial Technology Development Organization (Japan)
NEHRP	National Earthquake Hazards Reduction Programme
NELSAP	Nile Equatorial Lakes Subsidiary Action Programme
NEMA	National Emergency Management Agency (Nigeria)
NEPAD	New Partnership for Africa's Development
NGDC	National Geophysical Data Center
NGO	non-governmental organization
NIBS	National Institute for Building Sciences
NIC	National Intelligence Council (CIA, USA)
NIES	National Institute of Environmental Studies
NIS	New Israeli Shekel (currency unit)
NISER	Nigerian Institute of Social and Economic Research
NMP	New Mediterranean Policy
NMS	National Military Strategy
NOAA	National Oceanic and Atmospheric Administration
NODW	National Office for Drinking Water
NPC	National People's Congress
NPC	National Population Commission (Nigeria)
NPFL	National Patriotic Front of Liberia
NPR	Nuclear Posture Review (USA)
NPT	Nuclear Non-Proliferation Treaty (1967)
NPV	Net present value
NRC	National Research Council (USA)
NRG4SD	Network of Regional Governments for Sustainable Development
NRM	natural resource management
NSC	national security concept of People's Republic of China
NSC 162/2	National Security Council Paper No. 162/2 (New Look, Eisenhower administration, 1953)
NSC-68	National Security Council Paper No. 68 (US Grand Strategy of Containment, 1950)
NSDD	National Security Decision Directive (USA)
NSS	National Security Strategy (USA)
NTR Nagar	Nandamuri Taraka Ramarao Nagar (Name of the former Chief Minister of Andhra Pradesh from Telugu Desam Party)
NUDP	National Urban Development Policy (Nigeria)
NWC	Northwestern coast
NWSAS	North-Western Sahara Aquifer System
O_3	ozone
OAPEC	Organization for Arab Petroleum Exporting Countries
OAS	Organization of American States
OAU	Organization of African Unity
OCHA	Office for the Coordination of Humanitarian Affairs
ODA	Official Development Assistance
OECD	Organization for Economic Co-operation and Development
OFDA	Office of United States Foreign Disaster Assistance
OFDA-USAID	Office of Foreign Disaster Assistance - United States Agency for International Development
OMC	Observation and Monitoring Centre
OME	Mediterranean Energy Observatory
OPC	Oduduwa Peoples Congress
OPEC	Organization of Petroleum Exporting Countries
OPOCE	Office for Official Publications of the European Communities
OPT	Occupied Palestinian Territory
ORR	Outer Ring Road
OSCE	Organization for Security and Co-operation in Europe
OSE	Observatory for the Sustainability of Spain
Oslo II	Israeli-Palestinian Interim Agreement on the West Bank and Gaza Strip
OSS	Observatoire du Sahel et du Sahara [Sahara and Sahel Observatory], Tunis, Tunisia
OSSO	Observatorio Sismológico del Sur-Occidente [Seismologic Observatory of the South-West]
Oxfam	Oxford Committee for Famine Relief
PA	Palestinian Authority
PACD	Plan of Action to Combat Desertification
PAGES	Past Global Changes
PAN	National Action Programmes
PAND	National Action Plan Against Desertification
PAR	pressure and release model

PASSIA	Palestinian Academic Society for the Study of International Affairs
PBM	partnership building measure
PBP	partnership building project
PCAs	Partnership and Cooperation Agreements (European Union)
PCASED	Programme for Coordination and Assistance for Security and Development
PCBS	Palestinian Central Bureau of Statistics
PD	Presidential Decision
PD	Privatdozent [German academic title at the professorial level with no functional equivalent in English]
PD, UNDESA	Population Division, United Nations Department of Economic and Social Affairs
PDD	Plans de Développement Durable
PDSI	Palmer Drought Severity Index
PECC	Programas Especiales de Cambio Climático [Special Programmes for Climate Change]
PEI	Poverty and Environment Initiative
PEISOR	pressure, effect, impact, societal outcome and response model
PEN	Public Electricity Network
PFCs	perfluorocarbons
PFLP	Popular Front for the Liberalization of Palestine
PHG	Palestinian Hydrology Group
PIK	Potsdam Institute of Climate Change Impact Research
PIV	Predictive Indicators of Vulnerability
PKK	Partiya Karkerên Kurdistan [Kurdistan Workers' Party]
PLO	Palestine National Organization
PM5	Processing Modflow (version 5)
PMC	private military company
PMH	Palestinian Ministry of Health
PNA	Palestinian National Authority
PNC	Palestine National Council
PNOA	National Plan of Aerial Ortophotography
PNUD	Programa de Las Naciones Unidas Para el Desarrollo [UNDP]
PNUMA	Programa de Las Naciones Unidas Para el Medio Ambiente [UNEP]
PPD	Projected Population Difference
ppm	parts per million
PPP	purchasing power parity
PPRD	Prevention, Preparedness and Response to Natural and Man-made Disasters Programme
PRA	participatory rural appraisal
PRB	Population Reference Bureau
PRC	People's Republic of China
PRE	poverty-reducing expenditures
PRECIS	Providing Regional Climates for Impacts Studies (modified Version of the Met Office Hadley Centre RCM)
PRIF (HSFK)	Peace Research Institute Frankfurt (Germany)
PRIO	International Peace Research Institute Oslo
PROCAMPO	Programa de Apoyos Directos al Campo [National programme of direct finantial support to farmers, Mexico]
PRSPs	Poverty Reduction Strategy Papers
PSA	Plataforma Solar de Almeria
PSC	Political and Security Committee
PSIDS	Pacific Small Island Developing States
PSIS	Programme for Strategic and International Security Studies
PSP	private sector participation
PTSD	post-traumatic stress disorder
PUB	Proje Uygulama Birimi [Project Implication Unit], Prime Ministry Ankara
PV	Photovoltaic
PVI	Prevalent Vulnerability Index
PWA	Palestinian Water Authority
QDR	Quadrennial Defense Review Report (USA)
QERLOs	Quantified emission reduction and limitation objectives
QUMP	Quantifying Uncertainty in Model Predictions
R	risk
R&D	research & development
R=H+V	risk as hazard + vulnerability
R=PxL.	risk as the product of probability and loss
RA	rapid appraisal
RAND	Research and Development (think tank, funded by USAF)
RBO	River Basin Organization
RCCS	Regional Climate Centres
RCM	regional (climate) circulation model
RCOFs	Regional Climate Outlook Forum
RCREEE	Regional Centre for Renewable Energies and Energy Efficiency
REC	Regional Economic Community
REG	Regional Electricity Grid
RES	Renewable Energy Sources
RET	Renewable Energy Technologies
Rlce	resilience
RNA	ribonucleic acid
RP	Refah Partisi [Welfare Party]
RPG	Refugee Policy Group
Rs	Sri Lanka Rupees
RSDSC	Red Sea-Dead Sea Conveyance
RSS	Royal Scientific Society, Jordan
Rtce	resistance
RUF	Revolutionary United Front
RUF/SL	Revolutionary United Front of Sierra Leone
RUW	renewable underground water
RWA	Resident's Welfare Association
SAGARPA	Secretaría de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación [Ministry of Agriculture, Livestock, Rural Development, Fisheries and Food]
SALWs	Small Arms and Light Weapons

SAP	Structural Adjustment Programme
SAR	Second Assessment Report (IPCC, 1995/1996)
SARS	Severe Acute Respiratory Syndrome
SAS	Servicio Andaluz de Salud [Andalusia Health Service]
SAS	Studiengruppe Alternative Sicherheitspolitik [Study Group on Alternative Security Policy]
SASS	Système Aquifère du Sahara Septentrional [North-Western Sahara Aquifer System (NWSAS)]
SBSTA	Subsidiary Body for Scientific and Technological Advice (UNFCCC)
SBSTTA	Subsidiary Body on Scientific, Technical and Technological Advice (CBD)
SC, ST	Scheduled Castes and Scheduled Tribes (marginalized groups)
SCCF	Special Climate Change Fund
SCO	Shanghai Cooperation Organization
SCOPE	Scientific Committee on Problems of the Environment
SCOR	Scientific Committee on Oceanic Research
SD	sustainable development
SDC	Swiss Agency for Development and Cooperation
SDI	Sustainable Development Index
SD-PAMs	sustainable development policies and measures
SDPJ	Socialist Democratic Party of Japan
SDWW	Women and Development Service
SEA	Strategic Environmental Assessment
SEDESOL	Secretaria de Desarrollo Social [Ministery of Social Development, Mexico]
SEMARNAT – INE	Secretaría de Medio Ambiente y Recursos Naturales – Instituto Nacional de Ecología [Ministry of Environment and Natural Resources – National Institute of Ecology]
SEMARNAT	Secretaría de Medio Ambiente y Recursos Naturales [Ministry of Environment and Natural Resources, Mexico]
SENA	Servicio Nacional de Aprendizaje de Colombia [National Service of Training]
SEPA	State Environmental Protection Administration
SET	Strategic Energy Technology
SF_6	sulphur hexafluoride
SGBV	Sexual gender-based violence
SHG	Self help groups
SIDS	Small Island Developing States
SIGMEA	Sustainable Introduction of GMOs into European Agriculture (EU funded research project)
SIPRI	Stockholm International Peace Research Institute
SIS	Devlet Planlama Teskilati [Turkey's State Institute of Statistics]
SITCEN	Situation Centre (intelligence organization of the EU or central agency for providing situational awareness within NATO Headquarters
SitReps	Situation Reports
SIWI	Stockholm International Water Institute
SL	Sustainable Livelihood
SLM	sustainable land management
SLR	sea-level rise
SNC	Second National Communication
SOEs	state owned enterprises
SOLAS	Surface Ocean Lower Atmosphere Study
SOPAC	South Pacific Applied Geoscience Commission
SOPEMI	International Migration Outlook (OECD)
SoVI	Social Vulnerability (to Environmental Hazards) Index (for the US)
SPARC	Stratospheric Processes and their Role in Climate
SPI	Standardized Precipitation Index
SPS	Science for Peace and Security (NATO)
SPS	Sanitary and Phyto-sanitary Agreements
SQL	Structured Query Language
SRAP	Sub-regional Action Programme for West Asia
SRAP/WA	Sub-Regional Action Programme to Combat Desertification in West Africa and Chad
SRES	Special Report on Emission Scenarios (IPCC, 2000)
START	Strategic Arms Reduction Treaty
START	(ESSP's global change) SysTem for Analysis, Research, and Training
SU	Soviet Union
SUMAMAD	Sustainable Management of Marginal Drylands
SV	social vulnerability
SVA	Social Vulnerability to Climate Change for Africa
SwissRe	Swiss Reinsurance Company
T.C.	Turkish Republic
TACC	Territorial Approach to Climate Change
TAFREN	Task Force for Rebuilding the Nation
TAR	Third Assessment Report (IPCC, 2001)
TAY	Türkiye Afet Yönetimi [Turkish Emergency Management Directorate]
TBT	Technical Barriers to Trade (in the framework of WTO)
TCIP	Turkish Catastrophe Insurance Pool
TDH	Technical Documents in Hydrology
TDP	Telugu Desam Party (Regional party of Andhra Prades based on the regional language Telugu spoken in Andhra Pradesh)
TDS	total dissolved solids
TEEB	The Economics of Ecosystems and Biodiversity
TEN	Trans-European Networks
TERI	The Energy and Resources Institute (New Delhi, India)
TGG	Think GlobalGreen
THC	thermohaline circulation

THORPEX	long-term research programme organized under the World Meteorological Organization's World Weather Research
TIM	Territoriality Identity and Migration (Movement)
TMMOB SPO	Türkiye Sehir Planclar Odas [Turkish Chamber of Planners]
TNE	transnational enterprises
TOGA	Tropical Ocean Global Atmosphere
TREC	Trans-Mediterranean Renewable Energy Cooperation
TRIPS	Treaty on Intellectual Property Rights
TRW	total renewable water
TUIK	Türkiye statistik Kurumu [Turkish Statistical Institute]
TUSIAD	Türk Sanayicileri ve adamalar Dernei [Turkish Industrialist's and Businessmen's Association]
TWO	Transboundary Waters Opportunity Analysis
U.S.	United States of America
UAE	United Arab Emirates
UAV	unmanned aerial vehicle
UC – Irvine	University of California, Irvine
UCDP	Uppsala Conflict Data Program
UCJR	Upper Catchment of Jordan River
UCL	University College London
UCL	Université Catholique de Louvain [Catholic University of Louvain]
UfM	Union for the Mediterranean
UFW	unaccounted for water
UGEC	Urbanization and Global Environmental Change (IHDP research project)
UK	United Kingdom
UKCP09	United Kingdom Climate Projections 2009
UKMO	United Kingdom Meteorological Office
UMA	Union du Maghreb Arabe
UN	United Nations
UN GA	UN General Assembly
UN HABITAT	United Nations Human Settlements Programme
UN ISDR S&TC	UN ISDR Science and Technology Committee
UN ISDR	UN International Strategy for Disaster Reduction
UN MSC	UN Military Staff Committee
UN SC	UN Security Council
UN SG	UN Secretary-General
UN(-)DHA	United Nations Department of Humanitarian Affairs
UN(-)ISDR	United Nations International Strategy for Disaster Reduction
UN(-)SG	United Nations Secretary-General
UN/ISDR	UN International Strategy for Disaster Reduction
UN/ISDR-PPEW	UN International Strategy for Disaster Reduction – Platform for the Promotion of Early Warning
UNAM	Universidad Nacional Autónoma de México [National Autonomous University of Mexico]
UNAMSIL	United Nations Mission in Sierra Leone
UNC	Universidad Nacional de Colombia [National University of Colombia]
UNCBD	United Nations Convention on Biological Diversity
UNCCD	United Nations Convention to Combat Desertification
UNCDP	United Nations Committee for Development Planning (of UN; later renamed the Committee for Development Policy)
UNCDP	United Nations Committee for Development Policy
UNCED	United Nations Conference on the Environment and Development
UNCOD	UN Conference on Desertification
UNCRD	United Nations Centre for Regional Development
UNCSD	UN Commission on Sustainable Development
UNCTAD	United Nations Conference on Trade and Development
UNDDA	UN Department for Disarmament Affairs
UNDESA	United Nations Department of Economic and Social Affairs
UNDP	United Nations Development Programme
UNDP-BCPR	UNDP Bureau for Crisis Prevention and Recovery
UNDPKO	UN Department of Peacekeeping Operation
UNDRO	United Nations Disaster Relief Organization
UNECA	United Nations Economic Commission for Africa
UNEP	United Nations Environment Programme
UNEP-MAP	United Nations Environment Programme - Mediterranean Action Plan
UNEP-WCMC	UNEP – World Conservation Monitoring Centre
UNESCAP	United Nations Economic and Social Commission for Asia and the Pacific
UNESCO	United Nations Educational, Scientific and Cultural Organization
UNESCO-WWAP	United Nations Educational Scientific and Cultural Organization – World Water Assessment Programme
UNFCCC	United Nations Framework Convention on Climate Change
UNFPA	United Nations Population Fund
UNHCR	United Nations High Commissioner for Refugees
UNIANDES	Universidad de los Andes [Bogotá University of the Andes]
UN-IANGWE	United Nations Inter-Agency Network on Women and Gender Equality

UNICEF	United Nations International Children's Emergency Fund
UNISDR	United Nations International Strategy for Disaster Reduction
UNITWIN	University Twinning and Networking Scheme Network
UNO	United Nations Organization
UNOCHA	United Nations Office for the Coordination of Humanitarian Affairs
UNOOSA	United Nations Office for Outer Space Affairs
UNOWA	United Nations Office for West Africa
UNPD	United Nations Population Division
UN-REDD	United Nations Collaborative Programme on Reducing Emissions from Deforestation and Forest Degradation in Developing Countries
UNRWA	United Nations Relief and Works Agency for Palestine Refugee in the Near East
UNSC	United Nations Security Council
UNSCO	United Nations Special Coordinator for the Middle East Peace Process
UNSCOP	United Nations Special Committee on Palestine
UNSCR	United Nations Security Council Resolution
UNSG	United Nations, Secretary-General
UNSO	United Nations Sahelo-Sudanian Office
UN-SPIDER	United Nations Platform for Space-based Information for Disaster Management and Emergency Response
UNTFHS	United Nations Trust Fund for Human Security
UNU	United Nations University
UNU-EHS	United Nations University, Institute for Environment and Human Security
UNU-INWEH	United Nations University, Institute for Water, Environment and Health
UNU-WIDER	United Nations University – World Institute for Development Economics Research
UNV	United Nations Volunteers
UPC	Technical University of Catalonia, Barcelona [Universidad Politécnica de Cataluña, Barcelona]
US cent/kwh	US cent per kilo-watt-hour
US DoD	U.S. Department of Defense
US	United States
USA	United States of America
USACE	US Army Corps of Engineers
USAF	United States Air Force
USAID	United States Agency for International Development
US-CCIS	United States, Climate Change and International Security
USDA	U.S. Department of Agriculture
US-EPA	United States, Environment Protection Agency
USGS	United States Geological Survey
USLE	Universal Soil Loss Equation
USNEMA	United States National Emergency Management Agency
USSR	Union of the Soviet Socialist Republics
UV	ultra-violet
V	vulnerability
VA	vulnerability assessment
VAB	Valor Añadido Bruto [Gross Added Value]
VCA	vulnerability and capacity assessment
VLPVP	very large scale photo voltaic power
VRA	Virtual Research Associates
WANA	West Asia and North Africa
WANSA	West African Action Network on Small Arms
WAS	Western Aquifer System
WaSH MP	Water, Sanitation and Hygiene Monitoring Program
WB	World Bank
WBGU	Wissenschaftlicher Beirat der Bundesregierung Globale Umweltveränderungen [German Advisory Council on Global Change]
WCC	World Climate Conference
WCDR	World Conference on Disaster Reduction
WCP	World Climate Programme
WCRP	World Climate Research Programme
WCRP-CMIP3	WCRP's Coupled Model Intercomparison Project
WDR	World Disaster Report
WEQ	wind erosion equation
WESI	Water and Environmental Studies Institute
WEU	Western European Union
WFP	United Nations World Food Programme
WFUNA	World Federation of UN Associations
WG II	Working Group II (IPCC)
WGC	West Ghor Canal
WGCM	Working Group on Coupled Modelling (WCRP)
WGI, IPCC	Working Group I (Intergovernmental Panel on Climate Change)
WHO	World Health Organization
WIMEK	Wageningen Institute for Environment and Climate Research
WIPO	World Intellectual Property Organization
WMD	Weapons of Mass Destruction
WMO	World Meteorological Organization
WOCE	World Ocean Circulation Experiment
WRAP	Water Resources Action Program
WRC	Water Research Center
WRI	World Resources Institute
WRM	Water Resources Management
WSSD	World Summit on Sustainable Development
WTO	World Trade Organization
WUA	water user association
WVR	World Vulnerability Report
WWAP	World Water Development Report
WWF	World Water Forum

WWF	World Wildlife Fund (in US only)
WWF	World Wide Fund for Nature
WWI	World War I
WWRP	World Weather Research Programme
WWS	Woodrow Wilson School
WWTPs	Wastewater treatment plants
ZOPA	Zone of Possible Agreement

Biographies of Contributors

Editors

Hans Günter Brauch (Germany): Dr. phil. habil, Adj. Prof. (Privatdozent) at the Faculty of Political Science and Social Sciences, Free University of Berlin; since 2005 senior fellow at the *Institute for Environment and Human Security* of the *United Nations University* (UNU-EHS) in Bonn; since 1987 chairman of *Peace Research and European Security Studies* (AFES-PRESS). He is the editor of the *Hexagon Book Series on Human and Environmental Security and Peace* (HESP) with Springer-Verlag. He was guest professor of international relations at the universities of Frankfurt on Main, Leipzig and Greifswald and at the teachers training college in Erfurt. From 1976–1989 he was research associate at Heidelberg and Stuttgart universities, a research fellow at Harvard and Stanford University and he was also teaching at the universities of Darmstadt, Tübingen, Stuttgart and Heidelberg. In 2010 he is teaching at the Free University of Berlin, at SciencePo (Paris), the European Peace University (EPU, Schlaining, Austria), the National Autonomous University of Mexico (UNAM) and at the *Institute of Occidental Studies,* National University of Malaysia (UKM), Malaysia.

Publications: He has published 72 books, studies and research reports, 144 book chapters, more than 81 articles in journals on security, armament, climate, energy and migration policies and on Mediterranean issues in English and German; 21 book chapters and journal articles were published in 10 other languages, in Spanish, Greek, French, in Danish, Finnish, Russian, Japanese, Portuguese, Serbocroatian and in Turkish and more than 130 internet publications of keynote speeches and conference presentations in German, English and Spanish. His monographs include: (co-author with H. v.d. Graaf, J. Grin, W. Smit): *Militärtechnikfolgenabschätzung und präventive Rüstungskontrolle*, 1997; *Klimapolitik der Schwellenstaaten Südkorea, Mexiko und Brasilien; Osterweiterung der Europäischen Union. Umwelt- und Energiepolitik der Tschechischen Republik*, 2000. Books in English: (co-ed. with D.L. Clark): *Decisionmaking for Arms Limitation - Assessments and Prospects,* 1983; (ed.): *Star Wars and European Defence - Implications for Europe: Perceptions and Assessments*, 1987; (co-author with R. Bulkeley): *The Anti-Ballistic Missile Treaty and World Security*, 1988; (ed.): *Military Technology, Armaments Dynamics and Disarmament*, 1989; (co-ed. with R. Kennedy): *Alternative Conventional Defense Postures in the European Theater*, Vol. 1: *The Military Balance and Domestic Constraints*, 1990; Vol. 2: *Political Change in Europe: Military Strategy and Technology*, 1992; Vol. 3: *Military Alternatives for Europe after the Cold War*, 1993; (co-ed. with H.J. v.d. Graaf, J. Grin; W. Smit): *Controlling the Development and Spread of Military Technology*, 1992; (co-ed. with A. Marquina): *Confidence Building and Partnership in the Western Mediterranean. Tasks for Preventive Diplomacy and Conflict Avoidance,* 1994; author of *Energy Policy in North Africa (1950–2050). From Hydrocarbon to Renewables*, 1997; (co-ed. with A. Marquina; A. Biad): *Euro-Mediterranean Partnership for the 21st Century,* 2000; (co-ed. with A. Marquina): *Political Stability and Energy Cooperation in the Mediterranean* (2000); *Liberalisation of the Energy Market for Electricity and Gas in the European Union: A Survey and implications for the Czech Republic,* 2002; (co-ed. with P. Liotta, A. Marquina, P. Rogers, M. Selim): *Security and Environment in the Mediterranean. Conceptualising Security and Environmental Conflicts*, 2003; *Environmental Dimension of Human Security: Freedom from Hazard Impact,* 2005; *Threats, Challenges, Vulnerabilities and Risks in Environmental and Human Security*, 2005; (co-ed. with Ú. Oswald Spring, C. Mesjasz, J. Grin, P. Dunay, N. Chadha Behera, B. Chourou, P. Kameri-Mbote, P.H. Liotta): *Globalization and Environmental Challenges: Reconceptualizing Security in the 21st Century*, 2008; (co-ed. with Ú. Oswald Spring, J. Grin, C. Mesjasz, P. Kameri-Mbote, N. Chadha Behera, B. Chourou, H. Krummenacher): *Facing Global Environmental Change: Environmental, Human, Energy, Food, Health and Water Security Concepts* (2009); (co-ed. with Ú. Oswald Spring): *Reconceptualizar la Seguridad en el Siglo XXI* (2009); (co-author with Ú. Oswald Spring: *Securitizing the Ground – Grounding Security* and of *Seguritizar la Tierra – Aterrizar la Seguridad* (Bonn: UNCCD, 2009); (guest co-edit. with Ú. Oswald Spring and M. Aydin of a special issue of: *Uluslararasi Iliskiler/International Relations*, 5,18, Summer Special Issue on "Security" (2009): (co-edit. with Ú. Oswald Spring, C. Tsardanidis and Y. Kinnas: Greek translations of 7 chapters, vol. 3: *Globalization and Environmental Challenges*, in: *Agora*, Spring 2010; (co-edit. with Ú. Oswald Spring, C. Tsardanidis and Y. Kinnas): Greek translations of chapters, vol. 4: *Facing Global Environmental Change*, in: *Agora*, Summer 2010; *Climate Change and Mediterranean Security: International, National, Environmental and Human Security Impacts for the Euro-Mediterranean Region during the 21st Century - Proposals and Perspectives*. Papers IEMed No. 9 (Barcelona: IEMed, 2010).

Úrsula Oswald Spring (Mexico), full time Professor/Researcher at the *National University of Mexico* (UNAM) in the *Regional Multidisciplinary Research Center* (CRIM), national coordinator of water research for the National Council of Science and Technology (RETAC-CONACYT), and first MunichRe Foundation Chair on Social Vulnerability at the *United National University Institute for Environment and Human Security* (UNU-EHS) for 2005-2009. She was the founding Secretary General of El Colegio de Tlaxcala; General Attorney of Ecology in the State of Morelos (1992-1994) and National Delegate of the Federal General Attorney of Environment from 1994-1995. As Minister of Ecological Development in the State of Morelos (1994-1998) she planted over 30 million trees, promoted environmental education from childhood on and produced drinking water for the whole population with a reduction of 65% in infant mortality due to water-born illnesses. Between 1998 and 2000, she was President of the *International Peace Research Association* (IPRA) and later General Secretary of the Latin-American Council for Peace Research (2002-2006). She studied medicine, clinical psychology, anthropology, ecology, classical and modern languages and obtained her Ph.D from the University of Zürich (1978). For her scientific work she received the *Price Sor Juana Inés de la Cruz* (2005), the *Environmental Merit in Tlaxcala*, Mexico (2005, 2006); the *Price of Development of the UN* in Geneva. She was recognized as *Women Academic in UNAM* (1990 and 2000); and *Women of the Year* (2000). She works on nonviolence and sustainable agriculture with groups of peasants and women and is the representative for Latin American of *Diverse Women for Diversity*. She has written 45 books and more than 328 scientific articles and book chapters on sustainability, water, gender, development, poverty, drug consumption, brain damage due to undernourishment, peasantry, social vulnerability, genetic modified organisms, bioethics and human, gender and environmental security, peace and conflict resolution, democracy and conflict negotiation. Among her major publications are: (co-author with R. Strahm): *Why we are so poor?* (translated into 17 languages, 1.5 million copies); *Unterentwicklung als Folge von Abhängigkeit* (Bern: Lang, 1978); *Mercado y Dependencia* (México, D.F.: Ed. Nueva Imagen, 1979); *Piedras en el Surco* (México, D.F.: UAM-X, 1983); *Campesinos Protagonistas de su Historia: la Coalición de los Ejidos Colectivos de los Valles del Yaqui y Mayo, una Salida a la Cultura de la Pobreza* (México, D.F.: UAM-X, 1986); *Estrategias de Supervivencia en la Ciudad de México* (Cuernavaca: CRIM/UNAM, 1991); *Fuenteovejuna o Caos Ecológico* (Cuernavaca: CRIM/UNAM, 1999); (ed.): *Peace Studies from a Global Perspective: Human Needs in a Cooperative World* (New Delhi: Mbooks, 2000); (co-author with M. Salinas): *Gestión de Paz, Democracia y Seguridad en América Latina* (México, D.F.: UNAM-CRIM/Coltlax, Böll, 2002); (ed.): *El recurso agua en el Alto Balsas* (México, D.F.: IGF, CRIM/UNAM, 2003); (Ed.): *Soberanía y Desarrollo Regional. El México que queremos* (México, D.F.: UNAM, 2003); (ed.): *Resolución noviolenta de conflictos en sociedades indígenas y minorías* (México, D.F.: CLAIP, IPRA & Böll Fundation, COLTLAX, 2004); *El valor del agua: una visión socioeconómica de un Conflicto Ambiental* (COLTLAX, CONACYT, 2005); (ed.): *International Security, Peace, Development, and Environment*, Book 39: *Encyclopaedia on Life Support Systems* (Paris: UNESCO - EOLSS, UK, online); *Gender and Disasters* (Bonn: UNU-EHS, 2008); (co-ed. with H.G. Brauch, C. Mesjasz, J. Grin, P. Dunay, N. Chadha Behera, B. Chourou, P. Kameri-Mbote, P.H. Liotta): *Globalization and Environmental Challenges: Reconceptualizing Security in the 21 st Century*, 2008; (co-ed. with H.G. Brauch, J. Grin, C. Mesjasz, P. Kameri-Mbote, N. Chadha Behera, B. Chourou, H. Krummenacher): *Facing Global Environmental Change: Environmental, Human, Energy, Food, Health and Water Security Concepts* (2009); (co-ed. with H.G. Brauch): *Reconceptualizar la Seguridad en el Siglo XXI* (2009); (co-author with H.G. Brauch: *Securitizing the Ground – Grounding Security* and: *Seguritizar la Tierra - Aterrizar la Seguridad* (Bonn: UNCCD, 2009); (guest co-edit. with H.G. Brauch and M. Aydin of a special issue of: *Uluslararasi Iliskiler / International Relations*, 5,18, Summer Special Issue on "Security" (2009): (co-edit. with H.G. Brauch, C. Tsardanidis and Y. Kinnas: Greek translations of 7 chapters, vol. 3: *Globalization and Environmental Challenges*, in: *Agora*, Spring 2010; (co-edit. with H.G. Brauch, C. Tsardanidis and Y. Kinnas): Greek translations of chapters, vol. 4: *Facing Global Environmental Change*, in: *Agora*, Summer 2010; (co-author with I. Sánchez *et al.*, 2010): "Forced migration due to climate change"; in: *Journal of International Migration*; (co-authored with F. Flores et al.): *Migración Forzada, Sequía, Género y Vulnerabilidad Social* (Cuernavaca: CRIM-DGAPA-UNAM); (co-ed. with I. Sánchez et al.): *Investigación del agua en México* (Cuernavaca: CRIM-UNAM-CONACYT); (ed.): *Water Research in Mexico. Scarcity, Degradation, Stress, Conflicts, Management, and Policy* (Berlin: Springer, 2011).

Czeslaw Mesjasz (Poland): Dr. habil., Associate Professor, Faculty of Management, Cracow University of Economics, Cracow, Poland. His research interests include applications of systems approach in management and in international relations, game theory, conflict resolution and negotiation, corporate governance and the links between economics, finance and security. In 1992-1996 he was the convener of the Defence and Disarmament Commission of IPRA (*International Peace Research Association*). In 1991-1992 he received a NATO Democratic Institutions Fellowship. In 1992-1993

he was a Visiting Research Fellow at the Centre for Peace and Conflict Research in Copenhagen (later COPRI). He published some 180 works – two books in Polish, papers and book chapters in Polish and in English on management and international security. His major works in the fields associated with peace and security studies are: "Applications of Systems Modelling in Peace Research", in: *Journal of Peace Research*, 25,3, 1988; "Eastern Post-Cold War Peace Dividend: A Preliminary Typology of Components", in: Møller, Bjørn; Voronkov, Lev (Eds.): *Defence Doctrines and Conversion* (Aldershot: Dartmouth, 1996): 123-133; "Reorganization of Commercial Debt: Negotiations between Poland and the London Club (1981-1994)", in: Kremenyuk, Victor A.; Sjöstedt, Gunnar (Eds.): *International Economic Negotiation: Models versus Reality* (Cheltenham: Elgar, 2000): 149-174; "Economic and Financial Globalisation: Its Consequences for Security in the Early 21st Century", in: Brauch, H.G; Liotta, P.H.; Marquina, A.; Rogers, P. F.; El-Sayed Selim, M. (Eds): *Security and Environment in the Mediterranean. Conceptualising Security and Environmental Conflicts* (Berlin - Heidelberg - New York: Springer, 2003): 289-300; (co-author with Rogowski, Wojciech): "A Survey of Definitions of Financial Stability", in: Mieczyslaw, Dobija; Martin Susan (Eds.): *General Accounting Theory. Towards Balanced Development* (Cracow: Cracow University of Economics, 2005): 437-465; (co-ed. with H.G. Brauch, Ú. Oswald Spring, J. Grin, P. Dunay, N. Chadha Behera, B. Chourou, P. Kameri-Mbote, P.H. Liotta, 2008): *Globalization and Environmental Challenges: Reconceptualizing Security in the 21st Century*; (co-ed. with H.G. Brauch, Ú. Oswald Spring, J. Grin, P. Kameri-Mbote, N. Chadha Behera, B. Chourou, H. Krummenacher, 2009): *Facing Global Environmental Change: Environmental, Human, Energy, Food, Health and Water Security Concepts*; "Complexity of Social Systems", in: *Acta Physica Polonica A*, 4, 117 (2010).

John Grin (Netherlands) is Professor at the Department of Political Science of the University of Amsterdam. A physicist by training, his main interest throughout his career has been political judgment of and governance over socio-technological development, empirically focusing on military technology and security policy; agriculture, water management and biomedical technology. He co-established and is co-director of the transdisciplinary *Dutch Knowledge Network for System Innovations and Transitions* (KSI; <www.ksinetwork.nl>), in which some hundred researchers of ten different universities co-operate on major changes towards a sustainable society. From 2006–2009, he was scientific director of the Amsterdam School for Social science Research (ASSR; at: <www.assr.nl>). He co-edited special issues of the journals *Policy Sciences* (vol 43[2009] no. 4) and *Research Policy* (vol. 39 [2010] no. 4) on transitions, and he published (co-authored with Jan Rotmans, Johan Schot: *Transitions to Sustainable Development. New Directions in the Study of Long term Structural Change* (New York: Routledge, 2010). Earlier books include: *Military-technological choices and political implications. Command and control in established NATO posture and a non-provocative defence* (Amsterdam: VU University Press - New York: St. Martin's Press, 1990); (co-ed. with Wim A. Smit, Lev Voronkov): *Military-technological innovation and stability in a changing world. Politically assessing and influencing weapon innovation and military research and development* (Amsterdam: VU University Press, 1992); (co-ed. with Hans Günter Brauch, Henny van der Graaf, Wim Smit): *Controlling the Development and Spread of Military Technology* (Amsterdam: VU University Press, 1992); (co-author with Hans Günter Brauch, Henk van de Graaf, Wim Smit): *Militärtechnikfolgenabschätzung und Präventive Rüstungskontrolle. Institutionen, Verfahren und Instrumente* (Münster: LIT, 1997); (co-author with Henk van de Graaf, Rob Hoppe): *Technology assessment through interaction: A guide* (Den Haag: SDU, 1997); (co-ed. with Armin Grunwald): *Vision Assessment: Shaping Technology in 21st century society. Towards a repertoire for Technology Assessment* (Heidelberg: Springer, 2000); (co-ed. with Wytske Versteeg and Maarten Hajer): *Meervoudige democratie – ervaringen met vernieuwend bestuur* (Amsterdam: Aksant, 2006) and (co-author with Arienne van Staveren) *Werken aan systeeminnovaties* (Assen: van Grocum, 2007); (co-ed. with H.G. Brauch, U. Oswald Spring, C. Mesjasz, P. Dunay, N. Chadha Behera, B. Chourou, P. Kameri-Mbote, P.H. Liotta, 2008): *Globalization and Environmental Challenges: Reconceptualizing Security in the 21st Century* (Heidelberg – Berlin: Springer); (co-ed. with H.G. Brauch, Ú. Oswald Spring, C. Mesjasz, P. Kameri-Mbote, N. Chadha Behera, B. Chourou, H. Krummenacher, 2009): *Facing Global Environmental Change: Environmental, Human, Energy, Food, Health and Water Security Concepts* (Heidelberg – Berlin: Springer).

Jörn Birkmann (Germany): Dr.-Ing. habil, is Academic Officer and Head of the 'Vulnerability Assessment, Risk Management and Adaptive Planning Section' at the *United Nations University - Institute for Environment and Human Security* (UNU-EHS). He is also Adj. Prof. (Privatdozent) at the Department of Geography at the University of Bonn. He holds a PhD in spatial planning from Dortmund University as well as a license as an urban planner. He has broad working experience in the field of vulnerability, sustainable development and environmental assessment, being specialized in the area of the development of assessment methodologies and indicators to estimate and evaluate different socio-economic trends at the sub-national, local and household scale. Furthermore, he is a specialist in adaptive urban and spatial planning and an IPCC Lead Author for the special report *Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation*. His work experience encompasses research activities and lectures around the globe, for example in Sri Lanka, Indonesia, Vietnam, UK and Mexico. He is a full member of the *Academy of Spatial Research and Planning* (ARL). His latest edited book is: *Measuring vulnerability to hazards of natural origin. Towards disaster resilient societies* (Tokyo – New York: United Nations University Press, 2006). Between 2005 and 2010 he published more than 12 peer-reviewed articles on issues related to global environmental change, natural hazards, disasters risk reduction, vulnerability and socio-ecological crises.

Address: PD Dr.-Ing. Jörn Birkmann, UN Campus, Hermann-Ehlers Str. 10, 53111 Bonn, Germany.

Authors of Forewords and Preface Essays

Achim Steiner (Germany) is Executive Director of the *United Nations Environment Programme* (UNEP) and Under-Secretary General of the United Nations. Following the nomination by the Secretary-General, the General Assembly, on 16 March 2006, elected Mr. Steiner unanimously as UNEP's fifth Executive Director for a four-year term. He was re-elected for a second term to commence on 15 June 2010. Prior he was the Director-General of IUCN – the World Conservation Union – the world's largest environmental network with over 1,000 members including states, government agencies, and non-governmental organizations in 140 countries. He has worked both at the grass-roots level and at the highest levels of international policymaking to address the interface between environmental sustainability, social equity, and economic development. His professional career has included assignments with governmental and non-governmental, as well as international organizations in different parts of the world. In Washington, where he was Senior Policy Adviser of the IUCN Global Policy Unit, he led the development of new partnerships between the environment community and the World Bank and United Nations system. In South-East Asia, he worked as Chief Technical Adviser on a programme for sustainable management of Mekong River watersheds and community-based natural resources management. In 1998, he was appointed Secretary-General of the World Commission on Dams, based in South Africa, where he managed a global programme of work to bring together the public sector, civil society, and the private sector in a global policy process on dams and development. In 2001, he was appointed Director-General of the World Conservation Union, one of the most influential and highly respected organizations in the field of conservation, environment and natural resources management. As Chief Executive, he has held responsibility for the management and oversight of 1,000 staff located in 42 countries, implementing the Union's global work programme. His professional track record in the fields of sustainable development policy and environmental management, his firsthand knowledge of civil society, governmental and international organizations, as well as his global experience spanning five continents make him an excellent choice to lead the United Nations Environment Programme. Mr. Steiner was born in Brazil in 1961 where he lived for 10 years. His educational background includes a Bachelor of Arts from the University of Oxford, as well as a Master of Arts from the University of London with specialization in development economics, regional planning, and international development and environment policy. He also studied at the German Development Institute in Berlin, as well as the Harvard Business School. He serves on a number of international advisory boards, including the *China Council for International Cooperation on Environment and Development* (CCICED).

Address: Mr. Achim Steiner, Executive Director of UNEP, United Nations Environment Programme Headquarters, United Nations Avenue, Gigiri, PO Box 30552, 00100. Nairobi, Kenya.
Email: Nick Nuttall, Spokesperson, Office of the Executive Director <Nick.Nuttall@unep.org>.

Konrad Osterwalder (Switzerland) has been the fifth Rector of the United Nations University and Under-Secretary-General of the United Nations since 1 September 2007. He was born in Frauenfeld, Thurgau, Switzerland in 1942. He studied at the Swiss Federal Institute of Technology (*Eidgenössische Technische Hochschule*; ETH) in Zürich, where he earned a diploma (1965) and a doctorate (1970) in theoretical physics. After one year with the Courant Institute of Mathematical Sciences, New York University, he accepted a research position at Harvard University in 1971, where he was promoted to assistant professor in 1973 and associate professor in 1976. In 1977, he returned to Switzerland as a full professor of mathematical physics at ETH Zürich. He served as head of the ETH Department of Mathematics (1986–1990); in 1995, he was appointed rector of ETH, a post he held for 12 years. From November 2006 through August 2007, he served concurrently as ETH president pro tempore. He has served as vice president of the Conference of Rectors of Swiss Universities, chair of the University Council of Darmstadt University and as president of the Conference of European Schools of Advanced Engineering Education and Research. His research focused on the mathematical structure of relativistic quantum field theory as well as on elementary particle physics and statistical mechanics. During his career, he has been a visiting fellow or guest professor at several prominent universities around the world, including the *Institute des Hautes Études Scientifiques* (IHES; Bures-sur-Yvette, France), Harvard University, the University of Texas (Austin), the Max Planck Institute for Physics and Astrophysics (Munich), Università La Sapienza (Rome), Università di Napoli, Gakushuin University, and the Weizmann Institute of Science (Rehovot, Israel). He was a fellow of the Alfred P. Sloan Foundation (1974–1978) and is a member of the Swiss Academy of Technical Sciences. He serves as a member of the Executive Committee of the Club of Rome, holds an honorary degree from the Helsinki Technical University, and is an honorary member of Riga Technical University. He has made contributions to quantum field theory. In 1973, jointly with Robert Schrader, he formulated a mathematical foundation of the Euclidean formulation of quantum field theory proving equivalence with the relativistic formulation. See: Osterwalder, Schrader, 1973: "Axioms for Euclidean Greens Functions", in; *Communications in Mathematical Physics*, part 1, vol. 31: 83–112; part 2, vol. 42: 281–305.

Address: Prof. Dr. Konrad Osterwalder, Rector, United Nations University, Shibuya-ku, Jingumae 5-53-70, Tokyo 150-8925, Japan.

Jean-François Bureau (France) has been Assistant Secretary General for Public Diplomacy of NATO since 2007. He is a graduate of the Institut d'Etudes Politiques de Paris (1974) and graduated in political science with a specialization on defence and foreign affairs at the Paris I Pantheon-Sorbonne University (1977). Prior to his NATO position he was Director for Information and Communication at the French Ministry of Defence (29 July 1998 to 1 August 2007) and spokesperson for the Ministry of Defence. His previous professional activities include: auditor at the 'Cour des comptes' in charge of defence affairs and head of the communication unit (1994-1998); head of the press office of the Presidency of the Republic (1991-1994); counsellor of the Minister of Defence for Information and Communication (1991); head of the Information and Public Relations Office (SIRP) of the Ministry of the Interior (1990-1991); general secretary of the Institute for Home Security Studies (IHESI) (1989-1990); Under-Prefect in the department Allier (1985-1989); counsellor of the Minister of Defence for Parliamentary, Information and Public Relations Affairs (1983-1985); parliamentary adviser (National Assembly) for defence affairs (1981-1983); research assistant at the Centre for Defence Policy Studies (CEPODE), Paris I Pantheon-Sorbonne University (1978-1981). In addition he was an auditor at the 'Comité des prix de revient des programmes d'armement' of the French Defence Ministry (1996-1998); professor at the Ecole spéciale militaire Saint-Cyr Coëtquidan (1995-1998) being in charge of the course on strategy and international relations; professor at the Ecole Nationale d'Administration (1984-1985) in charge of the seminar on French-German cooperation on defence and security issues; member of the United Nations group of experts (1982-1983) on different aspects of the conventional arms race and the disarmament related to these armaments and the armed forces (New York/Geneva). His publications include: "Defence communication", in: *Défense nationale* (May 2003); "The French picture of the foreign world", in: *Politique Etrangère* (Winter 2002-2003); "The French military reform: 'identity change'", in: *Politique Etrangère* (Spring 1997); "The European moment", in: *Le Débat* (September 1985); "Decision-making process and arms control in France", in: Brauch, H.G.; Clarke, D. (Ed.): *Decision-making for arms limitation: Assessments and prospects* (Cambridge, MA: Ballinger, 1983); "Political parties and pacifist contest in Europe", in: Lellouche, Pierre (Ed.): *Pacifism and deterrence* (Paris: IFRI, 1983); "From the essential equivalence to the balance of forces: the arms control crisis", in: *Defence and Security* (ARES, 1981); "The eurostrategic negotiation and NATO", in: *Revue de Défense Nationale* (July 1981); *The establishment of an international fund of disarmament for development* (New York-Geneva: UNIDIR, 1979); *Issues and perspectives of the French-British cooperation in the nuclear military field* (Paris: Ministry of Defence, 1979). He was awarded the following honours: *Chevalier de la Légion d'Honneur* (2000); *Chevalier de l'Ordre du Mérite* (1990); *Officier de l'Ordre du Mérite* (2008) *Officier de l'Ordre du Mérite d'Allemagne fédérale* (1986); since 1979 he has been a member of the *Institut français des relations internationales* (IFRI).

Address: M. Jean-François Bureau, Assistant Secretary General for Public Diplomacy of NATO.

U. Joy Ogwu (Nigeria), Ambassador, currently serves as the Permanent Representative of Nigeria to the United Nations. Prior to her appointment as Nigeria's Foreign Minister in August 2006 she served as the first female Director-General of Nigeria's Foreign Policy Think-Tank – the *Nigerian Institute of International Affairs* (NIIA). While at the NIIA, she concurrently served as Chair of the Board of Directors of the *Centre for Advanced Social Science* (CASS) and Member of the United Nations Secretary General's Advisory Board on Disarmament Matters, from Janaury 2002, culminating in her appointment as the first African female Chairperson of the Secretary-General's Advisory Board for 2006. She has been a professor of Political Science and International Relations since 1993. She lectured on foreign policy and international affairs at the Command and Staff College, Jaji, the National War College and the *Institute for Policy and Strategic Studies* (NIPSS). In her academic studies, she focused on Latin America in particular on strengthening relations between Sub-Saharan Africa and Latin America. She lectured on South-South and Latin America's foreign relations. As a member of the Presidential Advisory Council on International Relations from October 2000 – 2006, and now Permanent Representative to the United Nations, where she continues to contribute to the advancement of Nigeria's foreign policy. Ambassador Ogwu has written extensively on foreign policy issues. Her publications include: (Ed.): *Nigerian Foreign Policy: Alternative Futures* (Macmillan 1986); (Ed.): *Nigeria's International Economic Relations; Dimensions of Dependence and Change* (1988, Rev. 2005; *The Economic Diplomacy of the Nigerian State (*1992, 2001*); The Nigerian Navy and the South Atlantic* (1995); (Ed.): *New Horizons for Nigeria in World Affairs* (2005). She has contributed to scholarly journals and books and her publications have been translated into in Portuguese, Spanish, and French.

Address: Her Excellency Amb. Prof. Dr. Joy Ogwu, Permanent Mission of the Federal Republic of Nigeria to the United Nations, 828 Second Avenue, New York, NY 10017, USA.

HRH Prince El Hassan bin Talal (The Hashemite Kingdom of Jordan) is a pluralist who believes in societies in which all peoples can live, work and function in freedom and with dignity. His Royal Highness has initiated, founded and is actively involved in a number of Jordanian and international institutes and committees. Some of the Jordanian institutes established by HRH include the Higher Council for Science and Technology, the Royal Scientific Society, the Arab Thought Forum, the Royal Institute for Interfaith Studies and the recently formed Regional Human Security Centre. Addressing the 36th Session of the United Nations in 1981, His Royal Highness proposed the establishment of the New International Humanitarian Order, which led to a

request by the Secretary General to found and co-chair the *Independent Commission on International Humanitarian Issues* (ICIHI). In May 2008, HRH delivered the Inaugural Thematic Debate on Human Security at the UN General Assembly. He serves as a member of the Commission on Legal Empowerment of the Poor which published its report in June 2003. The West Asia-North Africa Forum which was initiated by HRH, held its inaugural meeting in April 2009. Prince Hassan initiated and hosted ongoing consultations with the Orthodox Centre of the Ecumenical Patriarchate at Chambesy, Switzerland, the Pontifical Council for Inter-religious Dialogue at the Vatican and the The Interfaith Foundation in the United Kingdom through the aegis of the St. George's House, Windsor. He is a founder and now President of the *Foundation for Interreligious and Intercultural Research and Dialogue* (FIIRD) which was established in Geneva in 1999. HRH has had a long and active engagement with environmentally focused organizations, in particular the *Trans-Mediterranean Renewable Energy Cooperation* (TREC) Network, which developed the DESERTEC concept that was introduced to the European Parliament by HRH in 2007. The Jordan-based Badia Research and Development Centre was established in 1992 as a result of the long-term vision of HRH to train and improve the livelihoods of the Bedouin population of Jordan for whom the desert is still their home. In July 2002, Prince Hassan founded the *International Cultures Foundation* with Professor Ihsan Doramaci, Chairman of the Board of Trustees of Bilkent University in Ankara. *The Parliament of Cultures* was then formed in 2004, to fulfil an agenda of promoting understanding among different cultures and enhancing dialogue between their thinkers and intellectuals. In July 2003, HRH launched *Partners in Humanity* as a joint initiative with John Marks from *Search for Common Ground* (SFCG), which aims to improve understanding, build positive relationships and promote dialogue between the Muslim and western worlds. Having been always interested in young people and believing in the importance of their input to the community, His Royal Highness has founded several youth organizations in Jordan and has supported youth activities around the world. Prince Hassan is a member of the Board of the Nuclear Threat Initiative and served on the Commission for Weapons of Mass Destruction. In November 2009 HRH became an Honorary Fellow of the Royal Society of Edinburgh.

HRH is a prolific contributor to newspapers, journals, magazines and periodicals, as well as specific publications on regional and international issues. Prince Hassan is also the author of nine books: *A Study on Jer*usalem (1979, English); *Palestinian Self-Determination* (1981, English, Arabic); *Search for Peace* (1984, English, Arabic); *Christianity in the Arab World* (1994, English, Arabic, French, Greek, Spanish, Russian, German, Swedish); (co-author with Alain Elkann): *Essere Musulmano* (2001, Italian, French, Spanish); *To Be A Muslim* (2003, English); *Q and A: Contemporary Issues* (2003, Arabic); *Continuity, Innovation and Change: Selected Essays* (2001); *In Memory of Faisal I: The Iraqi Question* (2003, Arabic); *El Hassan bin Talal Collected Works*, vol-1 (2007, Arabic). Prince Hassan was awarded many honorary doctoral degrees by Bošziçi University, Turkey (1981); University of Durham, U.K. (1990); Spertus Institute of Jewish Studies, Chicago, U.S.A (1995); University of Ulster, Northern Ireland (1996); Moscow State Institute for International Relations, Russia (1997); University of Birmingham, U.K. (1999); Bilkent University, Turkey (1999); University of Hertfordshire, U.K. (2000); Faculty of Catholic Theology at the Eberhard-Karls-University, Tübingen, Germany (2001); University of Oklahoma, U.S.A. (2002); University of York, U.K. (2002); University of Portsmouth, U.K. (2002); International Islamic University of Islamabad, Pakistan (2005); School of Oriental and African Studies (SOAS) at the University of London, U.K. (2005); Medal of the World Academy from Old Dominion University, Norfolk, U.S.A (2005); Candido Mendes University (UCAM), Rio de Janeiro, Brazil (2006); Institute of Higher Education of Brasilia (IESB), Brazil (2006); Faculdades Metropolitanas Unidas (FMU), Saõ Paulo, Brazil (2006); Brandeis University, Boston, U.S.A; Soka University, Tokyo, Japan (2006); Faculty of Humanities, University of Lund, Sweden (2007); Eötvös Loránd University, Hungary (2007); University of Calgary (2008).

Address: HRH Prince El Hassan bin Talal, Majlis El Hassan, Royal Palace, Amman, The Hashemite Kingdom of Jordan.

Paul Crutzen (The Netherlands), Nobel Laureate for Chemistry in 1995; Member of the Max-Planck-Society for the Advancement of Science, Director Emeritus of the Atmospheric Chemistry Division, Max-Planck-Institute for Chemistry, Mainz, Germany (1980-2000); Executive Director, Max-Planck-Institute for Chemistry (1983-1985); part-time professor, Department of Geophysical Sciences, University of Chicago, USA (1987-1991), Scripps Institution of Oceanography, University of California, La Jolla, USA (1992-2008), Utrecht University, Institute for Marine and Atmospheric Sciences, The Netherlands (1997-2000).

He was born in Amsterdam on 3 December 1933. His mother's parents moved to the Ruhr region from East Prussia being of mixed German and Polish origin. His father came from Vaals who had relatives in the Netherlands, Germany and Belgium. He studied civil engineering in Amsterdam (1951–1954). He worked with a Bridge Construction Bureau of the City of Amsterdam, Holland (1954–1958); a House Construction Bureau in Gaevle, Sweden (1958–1959). He conducted academic studies and research at the University of Stockholm (1959–1973) where he obtained a M.Sc. (Filosofie Kandidat), 1963; a Ph.D. (Filosofie Licentiat), Meteorology, 1968, D.Sc. (Filosofie Doctor), 1973 with the highest possible distinctions; held various computer consulting, teaching and research positions at the Department of Meteorology, University of Stockholm where he was promoted to a Research Associate Professor (1959–1974). From 1974 to 1977 he was research scientist in the Upper Atmosphere Project, *National Center for Atmospheric Research* (NCAR), and a Consultant, Aeronomy Laboratory, Environmental Research Laboratories, *National Oceanic and Atmospheric Administration* (NOAA) in Boulder, Colorado, USA. From 1977–1980 he was a Sen-

ior Scientist and Director of the Air Quality Division, NCAR and adjunct professor at the Atmospheric Sciences Department, Colorado State University, Fort Collins, Colorado (1976–1981). Among his main research interests have been: stratospheric and tropospheric chemistry, and their role in the biogeochemical cycles and climate.

He was editor of the *Journal of Atmospheric Chemistry*, and member of its Editorial Board and of *Tellus*, *Climate Dynamics*, *Issues in Environmental Science and Technology*, *Mitigation and Adaptation Strategies for Global Change*, reviewing editor of *Science* (1993-1999); member, Advisory Board of the Institute for Marine and Atmospheric Research, Utrecht (1993–1997), of the STAP (*Scientific and Technical Advisory Panel*) Roster of Experts of the United Nations Environment Programme (1993–1998); Advisory Council of the Volvo Environment Prize (1993-present); Prix Lemaitre Committee, Belgium (1994-present); of the Scientific Advisory Group of the School of Environmental Sciences, University of East Anglia, Norwich (1995-present); Executive Board, Gesellschaft Deutscher Ärzte und Naturforscher (1995-2000), of ESTA (European Science and Technology Assembly) of the European Union, Brussels (1997–1999): Vice-Chairman of the Scientific Committee for the *International Geosphere-Biosphere Project* (IGBP) (1998–present); member, 'Global Change' Committee of the German Research Council and the Federal Ministry of Research and Technology, Germany (1998–1999); Fifth EU Framework Programme, External Advisory Group on 'Global change, climate and biodiversity' (1998–2000); co-chief scientist of the Indian Ocean Experiment (INDOEX), 1999.

He received numerous awards and honours, among them: Visiting Fellow of St. Cross College, Oxford, England (1969–1971); Outstanding Publication Award, Environmental Research Laboratories, NOAA, Boulder (1976); Special Achievement Award, Environmental Research Laboratories, NOAA (1977); Rolex-Discover Scientist of the Year (1984); tecipient, Leo Szilard Award for "Physics in the Publics Interest" of the American Physical Society (1985); elected fellow, American Geophysical Union and foreign Honorary Member of the American Academy of Arts and Sciences, Cambridge (1986); founding member of Academia Europaea (1988); recipient, Tyler Prize for the Environment (1989); corresponding member, The Royal Netherlands Academy of Science (1990); recipient, Volvo Environmental Prize; member, Royal Swedish Academy of Sciences, Royal Swedish Academy of Engineering and of Leopoldina, Halle (1991); Honorary Professor at the Johannes Gutenberg-University of Mainz (1993); Raymond and Beverly Sackler Distinguished Lecturer in Geophysics and Planetary Sciences, Tel Aviv University, Israel; recipient, Deutscher Umweltpreis, Umweltstiftung (German Environmental Prize of the Federal Foundation for the Environment) 1994; Foreign Associate, U.S. National Academy of Sciences; recipient, Max-Planck Research Prize (1994); Nobel Prize in Chemistry (with Dr. Molina and Dr. Rowland, U.S.A.); Global Ozone Award for "Outstanding Contribution for the Protection of the Ozone Layer" by UNEP (1995); Minnie Rosen Award for "High Achievement in the Service to Mankind", Ross University, New York; Louis J. Battan Author`s Award (with Dr. T.E. Graedel), American Meteorological Society; Medail d'Or de la Ville de Grenoble, France; Election to the Global 500 Roll of Honour of the United Nations Environmental Programme (UNEP); "Commandeur in de Orde van de Nederlandse Leeuw"; Pontifical Academy of Sciences (Vatican); honorary member, International Ozone Commission; Honorary Member, European Geophysical Society (EGS); Bundesverdienstorden (Order of Merit of the Federal Republic of Germany); titular member, European Academy of Arts, Sciences and Humanities, Paris (1996); honorary member, American Meteorological Society, European Geophysical Society (EGS); Erasmus Lecturer and Medalist of the Academia Europeae, Gent, Belgium; member, Accademia Nazionale dei Lincei, Roma, Italy (1997); Ceremonial Lecture at the Annual Assembly, Deutsche Physikalische Gesellschaft (German Physical Society), Regensburg; honorary member, *Commission on Atmospheric Chemistry and Global Pollution* (CACGP) 1998; foreign member, Russian Academy of Sciences; H. Julian Allen Award 1998, for outstanding scientific paper (co-authored) of 1998 at NASA Ames Research Center (1999); honorary member, Swedish Meteorological Society (2000); Karamanlis Institute for Democracy, Athens, Greece, for outstanding contributions to science and society; member, Council, Pontifical Academy of Sciences; honorary chairman, Climate Conference 2001, 20-24 August, Utrecht, The Netherlands (2001); Worldwide most cited author in the Geosciences with 2911 citations from 110 publications during the decade 1991–2001, ISI (Institute for Scientific Information, Philadelphia, USA), issue Nov./Dec. 2001; honorary member, *World Innovation Foundation*, WIF (2002).

He obtained Honorary Doctoral Degrees, i.a. from York University, Canada (1986); Université Catholique de Louvain, Belgium (1992); University of East Anglia, Norwich, UK (1994); Aristotle University, Thessaloniki, Greece (1996); University of Liège, Belgium; University of San José, Costa Rica; Tel Aviv University, Israel; Oregon State University, Corvallis, USA; University of Chile, Santiago, Chile; Université de Bourgogne, Dijon, France (1997); University of Athens, Greece (1998); Democritus Univer-sity of Thrace, Greece (2001); Nova Gorica Polytechnic, Slovenia; University of Hull, UK (2002).

Address: Prof. Dr. Paul Crutzen, Max Planck Institute for Chemistry, Department Atmospheric Chemistry, Joh.-J.-Becher-Weg 27, 55128 Mainz, Germany.

Amb. Jayantha Dhanapala (Sri Lanka), has been President of the Pugwash Conferences on Science and World Affairs since November 2007. From 1998 to 2003 he was Under Secretary-General of the United Nations for Disarmament when he piloted the UN role in arresting the proliferation of small arms and light weapons, anti-personnel landmines, conventional weapons, and weapons of mass destruction while reinforcing existing norms and norm-building in other areas such as missiles. He launched managerial initiatives in gender mainstreaming, innovated the exchange of

weapons for a development programme, and linked disarmament with development, the environment and peace education programmes. He served as a member of the International Weapons of Mass Destruction Commission (Blix Commission) and of the Canberra Commission on the Elimination of Nuclear Weapons (1996). He was President of the 1995 Review and Extension Conference of the Treaty on the Non-Proliferation of Nuclear Weapons. He was Permanent Representative of Sri Lanka to the United Nations in Geneva (1984-1987). In 1987, he became director of the *United Nations Institute for Disarmament Research* (UNIDIR). After returning to his country's Foreign Ministry in 1992 he was Additional Foreign Secretary and served as Sri Lanka's Ambassador to the United States, with concurrent accreditation to Mexico (1995 to 30 April 1997).

He received a BA (Honours) degree from the University of Peradeniya in Sri Lanka (1961); studied Chinese at the School of Oriental and African Studies of the University of London (1966-1967); and obtained a MA in international studies at the American University in Washington, D.C. (1976). He joined Sri Lanka's foreign service in 1965 and held diplomatic appointments in London, Beijing, Washington, D.C., and New Delhi, in addition to being Director of the Non-Aligned Movement Division of the Foreign Ministry during Sri Lanka's chairmanship (1965-1993). He represented Sri Lanka at the United Nations General Assembly and at conferences of the Non-Aligned Movement and of the Commonwealth. In mid-2004 he was invited to manage the peace process in Sri Lanka and he served until November 2005.

He has been active internationally as a member of the Governing Board of the *Stockholm International Peace Research Institute* (SIPRI); the International Advisory Group of the *International Committee of the Red Cross* (ICRC, 2003-2007); the United Nations University Council (until 2010); the Geneva Centre for the Democratic Control of Armed Forces; the Advisory Council of the Stanford Institute for International Studies; the International Board of the Bonn International Center for Conversion; the International Advisory Board of the James Martin Center for Nonproliferation Studies, Monterey Institute of International Studies; and as Honorary President of the International Peace Bureau (2003-2007).

He published four books and several articles in international journals, and has lectured in many countries. He was awarded a MacArthur Foundation grant to research and write his book on "Multilateral Diplomacy and the NPT: An Insider's account" published by UNIDIR (2005). He received several awards including the Trainor Award for Distinction in the Conduct of Diplomacy by the Edmund A. Walsh School of Foreign Service in Georgetown University, Washington, D.C., the Monterey Institute of International Studies, the Ploughshares Fund and the School of International Service of American University, Washington D.C. for his work in diplomacy and disarmament, and was the Global Security Institute's first recipient of the Alan Cranston Peace Award in 2002. He was nominated Sri Lankan of the Year 2006 by the Sri Lankan business journal 'Lanka Monthly Digest'. He received several honorary doctor degrees by the University of Peradeniya, Sri Lanka (2000), the Monterey Institute of International Studies, U.S.A. (2001), the University of Southampton, U.K. (2003), the Sabaragamuwa University, Sri Lanka (2003), and from the Dubna International University of Nature, Society and Man in Russia (2009). In November 2007 the International Peace Bureau awarded him the Sean MacBride Prize. He was invited to deliver several keynote lectures including the Olof Palme Memorial lecture at SIPRI in 1999 and the Dorothy Hodgkin Memorial Lecture to Pugwash in 2003.

Address: Amb. Jayantha Dhanapala, 25/6 Pepiliyana Road, Nugegoda. Sri Lanka.

Ulrich Beck (Germany) is Professor for Sociology at the University of Munich, and has been the British Journal of Sociology LSE Centennial Professor in the Department of Sociology since 1997. He has received Honorary Doctorates from several European universities. He currently studies modernization, ecological problems, individualization, and gobalization. His most recent research activities include a long-term empirical study of the sociological and political implications of 'reflexive modernization', which explores the complexities and uncertainties of the process of transformation from first to second modernity. Specifically he is working on unpacking cosmopolitanism for the social sciences: a research agenda. He has contributed a number of significant new concepts in international sociology, including 'risk society', 'individualization', 'reflexive modernization', 'methodological nationalism' and 'methodological cosmopolitanism'. Since 1992 he has been professor for sociology and director of the Institute for Sociology of Munich University. He is also the British Journal of Sociology Professor at the London School of Economics and Senior Research Fellow at Harvard. He is married to the German sociology professor Elisabeth Beck-Gernsheim. He has received many international prizes and honors. Since 1999 he has been the speaker of the DFG research programme on 'Reflexive Modernity'. He is the editor of the sociological journal *Soziale Welt* (since 1980) , editor of the book series on Second Modernity at Suhrkamp, the author of some 150 articles in reviewed journals, and author or editor of more than 40 books, translated in more than 40 languages including: *Risk Society: Towards a New Modernity* (1992); (co-author with Anthony Giddens and Scott Lash): *Reflexive Modernization. Politics, Tradition and Aesthetics in the Modern Social Order* (1994); (with E. Beck-Gernsheim): *The Normal Chaos of Love* (1995); *Ecological Enlightenment* (1995); *Ecological Politics in an Age of Risk* (1995); *The Reinvention of Politics. Rethinking Modernity in the Global Social Order* (1996); *Democracy without Enemies* (1998); *World Risk Society* (1998); *What Is Globalization?* (1999); *The Brave New World of Work* (2000); (with Barbara Adam and Joost Van Loon): *The Risk Society and Beyond: Critical Issues for Social Theory* (2000); (with E. Hania Zlotnik (Mexico) is Director of the Population Division of the United Nations, where she worked previously as Chief of the Mortality and Migration Section and Chief of the Population Estimates and Projections Section, having joined the Division in 1982 as Population Affairs Officer. Before joining the United Nations, she worked for the Committee on Population and Demography of the US National Research Council. She holds a Ph.D. in Statistics and Demography from Princeton University and is a graduate of the *Universidad Nacional Autónoma de México* (UNAM). Her work has spanned the field of demography, covering the analysis of fertility, mortality and migration with special emphasis on their quantitative aspects. She has prepared manuals on demographic estimation techniques and on the collection of international migration statistics. She has edited or written reports published by the United Nations on a variety of topics, including international migration and development, female migration, levels and trends in urbanization, population distribution and migration, population ageing, health and mortality, and population estimates and projections. Her work also includes over 35 articles in books or refereed journals. As Director of the Division, she was responsible for the substantive preparation of the High-level Dialogue on International Migration and Development that the General Assembly of the United Nations conducted in 2006. She has been an active member of professional associations, serving as Board Member for the Population Association of America and as Vice-President of *the International Union for the Scientific Study of Population* (IUSSP).
Books she has co-authored include: Bilsborrow, Richard E.; Hugo, Graeme.; Oberai, A.S. (Eds.): *International Migration Statistics* (Geneva: International Labour Office, 1997); Kritz, Mary M.; Lim, Lin L. (Eds.): *International Migration Systems: A Global Approach* (Oxford: Clarendon Press, 1992); *Step-by-Step Guide to the Estimation of Child Mortality* (New York: United Nations, 1990); *Manual X: Indirect Techniques for Demographic Estimation* (New York: United Nations, 1983); *Computer Programs for Demographic Estimation: A Users Guide* (Washington, DC: National Academy Press, 1981). Some of her published papers are: "Does population matter for climate change?", in: Guzman, Jose Miguel et al. (Eds.): *Population Dynamics and Climate Change* (New York, UNFPA and IIED, 2009); "Demographic Trends", in: Caballero, Benjamin; Popkin, Barry M. (Eds.): *The Nutrition Transition* (Amsterdam: Academic Press, 2002); "International migration 1965-96: An overview", in: *Population and Development Review*, 24,3 (1998): 429-468; "Migration to and from developing regions: A review of past trends", in: Lutz, Wolfgang (Ed.): *Alternative Paths of Future World Population Growth: What Can We Assume Today?* (London: Earthscan Publications Ltd., 1996).

Address: Dr. Hania Zlotnik, Director, Population Division, United Nations, DC2-1950, 2 United Nations Plaza, New York, NY 10017.
Email: <Zlotnik@un.org>.

Christoph Müller (Germany) is a geoecologist and holds a Ph.D. from Potsdam University and the International Max Planck Research School on Earth System Modelling in Hamburg, Germany. He held positions at the Max Planck Institute for Meteorology in Hamburg (Germany), the Netherlands Environmental Assessment Agency (PBL, The Netherlands), and at the *Potsdam Institute for Climate Impact Research* (PIK). His work focus is on land-use dynamics in an earth-systematic context: drivers of land-use change, impacts on food security and climate as well as on carbon- and water cycles. He is working with numerical simulation models, including climate models, dynamic vegetation models, crop models, land-use models, and integrated assessment models. He is associate lecturer at Potsdam University. Among his major publications are: (with Lotze-Campen, H.; Bondeau, A.; Rost, S.; Popp, A.; Lucht, W. 2008): "Global food demand, productivity growth and the scarcity of land and water resources: a spatially explicit mathematical programming approach", in: *Agricultural Economics*, 39,3: 325-338; (with Eickhout, B.; Zaehle, S.; Bondeau, A.; Cramer, W.; Lucht, W. 2007): "Effects of changes in CO2, climate, and land use on the carbon balance of the land biosphere during the 21st century", in: *Journal of Geophysical Research - Biogeosciences*, 112, G02032; (with Lucht, W. 2007): "Robustness of terrestrial carbon and water cycle simulations against variations in spatial resolution", in: *Journal of Geophysical Reserach - Atmospheres*, 112, D06105; (with Bondeau, A.; Lotze-Campen, H.; Cramer, W.; Lucht, W. 2006): "Comparative impact of climatic and nonclimatic factors on global terrestrial carbon and water cycles", in: *Global Biogeochemical Cycles*, 20; (with Heistermann, M.; Ronneberger, K. 2006): "Land in Sight? Achievements, Deficits and Potentials of Continental to Global Scale Land-Use Modeling", in: *Agriculture, Ecosystems and Environment*, 114,2-4: 141-158.

Address: Dr. Christoph Müller, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam, Germany.

Hermann Lotze-Campen (Germany) studied Agricultural Sciences and Agricultural Economics in Kiel (Germany), Reading (UK) and Minnesota (USA). He holds a Ph.D. in Agricultural Economics from Humboldt University Berlin. In a previous position at Astrium/InfoTerra, a European space company, he has developed applications of satellite remote sensing information for agricultural statistics and large-scale modeling, precision farming and forestry. At the *Potsdam Institute for Climate Impact Research* he is lead-

ing a research group on the interactions between climate change, agriculture and food production, land and water use, and adaptation options through biomass energy production and technological change. Among his major publications are: (with Schellnhuber, H. J. 2009): "Climate impacts and adaptation options in agriculture: what we know and what we don't know", in: *Journal für Verbraucherschutz und Lebensmittelsicherheit* (Journal for Consumer Protection and Food Safety) 4: 145-150; (with Müller, C.; Bondeau, A.; Rost, S.; Lucht, W. 2008): "Global food demand, productivity growth and the scarcity of land and water resources: a spatially explicit mathematical programming approach", in: *Agricultural Economics*, 39,3: 325-338; (with Reusswig, F.; Stoll-Kleemann, S. 2008: "Integrated Socio-Ecological Monitoring of Biodiversity Change - Building upon the World Network of Biosphere Reserves", in: *GAIA*, 17,S1: 107-115; (2008): "The role of modelling tools in Integrated Sustainability Assessment (ISA)",in: *International Journal for Innovation and Sustainable Development*, 317,1-2: 70-92; (with Welp, M. 2007): "More food with less water: the role of efficiency gains, lifestyles and trade"; on: Lozán, J.L.; Graßl, H.; Hupfer, P.; Menzel, L.; Schönwiese, C.D. (Eds.): *Global change: Enough water for all?* (Hamburg: Universität Hamburg): 306-309.

Address: Dr. Hermann Lotze-Campen, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam, Germany.

Veronika Huber (Germany) works at the *Potsdam Institute for Climate Impact Research* (PIK) as a Scientific Assistant to the Director. She holds a Ph.D. in Ecology from the University of Potsdam. Most of her research has focused on the responses of freshwater systems to anthropogenic disturbances, especially climatic change. Lately, her interests have shifted to the dynamics happening at the interface between climate change science and politics. Previous to joining PIK, she worked at the Leibniz Institute for Freshwater Ecology and Inland Fisheries (IGB) and at Kellogg Biological Station (KBS) in Michigan, USA. During an internship at the United Nations Environment Programme in Nairobi, she gained experience in the field of climate policy. She studied biology and ecology at Ecole normale supérieure in Paris and at the Universities of Konstanz and Potsdam. Among her major publications are: (with Adrian, R.; Gerten, D., 2008): "Phytoplankton response to global warming modified by trophic state", in: *Limnology and Oceanography,* 53: 1-13; (with Steiner, C.F.; Schwaderer, A.S.; Klausmeier, C.A.; Litchman, E., 2009*):* "Periodically forced food chain dynamics: model predictions and experimental validation", in: *Ecology* 90,11*:* 3099-3107*;* (with Breyer, C., 2008): "Ursachen und Folgen des Klimawandels", in: Creutzig, F.; Goldschmidt. J.C. (Eds.): *Energie, Macht, Vernunft – Der umfassende Blick auf die Energiewende* (Aachen: Shaker Media); (with Thebault, E.; Loreau, M., 2007): "Cascading extinctions and ecosystem functioning: constrasting effects of diversity depending on food web structure", in: *Oikos,* 116,1: 163-173; (with Gaedke, U., 2006): "The role of predation for seasonal variability patterns among phytoplankton and ciliates", in: *Oikos,* 114,2: 265-276.

Address: Dr. Veronika Huber, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam.

Alexander Popp (Germany) is a Research Fellow at the *Potsdam Institute for Climate Impact Research* (PIK) and head of the working group on land use management in Research Domain III - Sustainable Solutions. His scientific work concentrates on potential and limitation of bioenergy, avoided deforestation in tropical countries, vulnerability of the agricultural sector to climate and land use change, mitigation in the agricultural sector and climate policy as a component of fair globalization and sustainable poverty reduction. Among his major publications are: (with *Vogel. M.; Blaum, N.; Jeltsch, F., in press): "Scaling up eco-hydrological processes - the role of surface water flow in water limited landscapes", in: Journal of Geophysical Research - Biogeosciences in press; (with* Domptail, S.; Blaum, N.; Jeltsch, F., 2009): "Land use experience does qualify for adaptation to climate change", in: *Ecological Modelling*, 220,5: 694-702; (with Blaum, N.; Jeltsch, F., 2009): "Ecohydrological feedback mechanisms in arid rangelands: Simulating the impacts of topography and landuse", in: *Basic and Applied Ecology,* 10*:* 319-329*; (with Lotze-Campen, H.; Müller, C.; Bondeau, A.; Rost, S.; Lucht, W.,* 2008*): "Food demand, productivity growth and the spatial distribution of land and water use: a global modelling approach", in: Agricultural Economics,* 39,3*:* 325-338*; (with* Schwager M.; Blaum N.; Jeltsch F., 2007): "Simulating the impact of vegetation structure on the occurrence of a small mammalian carnivore in semi-arid savanna rangelands", in: *Ecological Modelling*, 209,2: 136-148.

Address: Dr. Alexander Popp, Potsdam Institute for Climate Impact Research, Telegraphen-berg A 51, P.O. Box 601203, D-14412 Potsdam.

Anastasia Svirejeva-Hopkins (Russia/Canada/Germany) has initially studied soil science and geography at the Moscow State University. Afterwards, she has completed M. Phil. degree at the Cranfiled University, UK in eco technology and ecological modelling of watersheds. She also has M.Sc. from the University of Toronto in physical geography and GIS, and worked at the Environment Canada on the development of the GIS based expert system for the control of water pollution from different types of the land use. After moving to Germany in 1999, she started working at PIK; she has received her Ph.D. in 2004 in modelling of the dynamics of carbon emissions from urbanization. She has spent two years for her post doc at the University of Lisbon, Portugal, where he has continued to work on urbanization and urban biochemistry. She is going to be working on her habilitation thesis and her research interests at the moment are modelling of urban dynamics processes and nitrogen cycling in the cities of Europe. Among her major

publications are: (with all names please, 2004): "Urbanised territories as a specific component of the Global Carbon Cycle", in: *Ecological Modelling*, 173: 295-312; (with Schellnhuber, H.J., 2006): "Modelling carbon dynamics from urban land conversion: fundamental model of city in relation to a local carbon cycle", in: *Carbon Balance and Management*, 1,8 (15 August); at: <http://www. cbm journal.com/>; (2008): "Urban expansion and its contribution to the regional carbon emissions: Using the model based on the population density distribution", in: *Ecological Modelling*, 216,2: 208-216; (with Svirehev, Yu.M., 2008): "Biosphere: Vernadsky's concept", in: Jørgensen, S. E.; Fath, B. (Eds.): *Encyclopedia of Ecology*; Vol. 1: *Global Ecology* (Amsterdam: Elsevier): 467-471; (2008): "Urbanization as a global ecological process", in: Jørgensen, S. E.; Fath, B. (Eds.): *Encyclopedia of Ecology*; Vol. 5: *Global Ecology* (Amsterdam: Elsevier): 3672-3678.

Address: Dr. Anastasia Svirejeva-Hopkins, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam, Germany.

Michael Krause (Germany) has been employed as Research Associate at the *Potsdam Institute for Climate Impact Research* (PIK) since 2007. He currently works on his PhD in economics of global land use under climate change scenarios in a non-linear optimization model. He holds a Master's and a Bachelor's degree in Forest Sciences from Dresden University of Technology and specialized in international forest policy, non-conventional forestry and natural resource economics. Previous research was conducted, *inter alia*, at the Institute of International Forestry and Forest Products, Dresden University of Technology, the Department of Development Economics, Migration and Agricultural Policy, University of Kassel, the Ethiopian Agricultural Research Organisation and Xuan Mai Forestry University Vietnam in the fields of social forestry and behavioral decision making, agricultural policy and environmental and resource economics. He gained experience in the field of climate policy during his specialization phase at Dresden University of Technology and his employment as lecturer in agricultural policy at University of Kassel.

Address: Mr. Michael Krause, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam, Germany.
Email: <michael.krause@pik-potsdam.de>.

Hans Joachim Schellnhuber (Germany) has been Director of the *Potsdam Institute for Climate Impact Research* (PIK) since its foundation in 1992 and Professor for Theoretical Physics at Potsdam University since 1993. He is chairman of the German Advisory Council on Global Change (WBGU) and was appointed Chief Government Advisor on Climate and Related Issues by the German Federal Government for the G8 and EU presidencies in 2007. As a member of the High Level Expert Group he also advises the President of the European Commission, José Manuel Barroso, on energy and climate change issues. He is a longstanding member of the *Intergovernmental Panel on Climate Change* (IPCC) who was awarded the Nobel Peace Prize in 2007. Born 1950 in Ortenburg, Germany, he studied Physics and Mathematics at the University of Regensburg. After he had obtained his Ph.D. in Theoretical Physics he spent several research periods abroad at the University of California among other institutions. In 1989 he became Professor at the Interdisciplinary Centre for Marine and Environmental Sciences at the University of Oldenburg and later the centre's managing director. From 2001 to 2005 he was also engaged as Research Director of the British Tyndall Centre for Climate Change Research. He is member of the editorial boards of several scientific journals and of scientific associations, inter alia, the German National Academy of Sciences (Leopoldina), the U.S. National Academy of Sciences and the Max Planck Society. He authored and co-authored about 210 articles and more than forty books on Theoretical Physics, Environmental Analysis and Sustainability Science. In 2004, he was awarded the title 'Commander of the Most Excellent Order of the British Empire' (CBE) by Queen Elizabeth II. In 2007, he received the German Environment Prize for his scientific work in the field of climate impact research and its dissemination to politicians and the public, and in 2008 he was awarded the Order of Merit of the State of Brandenburg. Since 2010 Schellnhuber is External Professor at the Santa Fe Institute.

Among his major publications are: (with Rahmstorf, S., 2006): *Der Klimawandel. Diagnose, Prognose, Therapie* (München: C.H. Beck); (with Lenton, T.M., 2007): "*Tipping the scales.* Nature Reports", in: *Climate Change*, 1, 97; (with Lenton, T.; Held, H.; Kriegler, E.; Hall, J.; Lucht, W.; Rahmstorf S., 2008): "Tipping elements in the Earth's climate system", in: *Proceedings of the National Academy of Sciences of the United States of America, PNAS*, 105: 1786-1793; (2008): "Global warming: Stop worrying, start panicking?", in: *PNAS*, 105: 14239-14240; (with Hall, J.; Held, H.; Dawson, R.; Kriegler, E., 2009): "Imprecise probability assessment of tipping points in the climate system", in: *PNAS*, 106: 5041-5046; (with Hofmann, M., 2009): "Ocean acidification affects marine carbon pump and triggers extended marine oxygen holes", in: *PNAS*, 106:3017-3022; (Ed.): "*Tipping Elements in Earth Systems Special Feature", in: PNAS*, 106, 20561-20621; (Co-ed. with Molina, M.; Stern, N.; Huber, V.; Kadner, S., 2010). *Global Sustainability - A Nobel Cause* (Cambridge: Cambridge University Press).

Address: Prof. Dr. Hans Joachim Schellnhuber, Potsdam Institute for Climate Impact Research, Telegraphenberg A 31, P.O. Box 601203, D-14412 Potsdam, Germany.

Authors

Zafar Adeel (Pakistan) is the Director of United Nations University (UNU) Institute for Water, Environment and Health. He has served with UNU since 1998 and holds a Master's Degree from Iowa State University (1992) and a PhD from Carnegie Mellon University (1995). Currently, he is serving as the Chair of UN-Water; a group of 27 agencies focused on global water issues. He has served with UNU since 1998 and holds a Master's Degree from Iowa State University (1992) and a PhD from Carnegie Mellon University (1995). He has also served as a Senior Engineer at GeoTrans Inc. for a number of years before joining UNU. He has experience in a variety of water and environmental issues, including monitoring and control of water pollution, water management in dry areas, solutions to industrial environmental problems, modeling of environmental systems and environmental policy formulation. He has led the development of a network of scientists working in water-scarce countries, particularly those in Africa, Middle East and Asia. Through his editorial lead, this network has published eight books in the UNU Desertification Series: *New Technologies to Combat Desertification* (199), *Water Management in Arid Zones* (2000), *New Approaches to Water Management in Central Asia* (2001), *Integrated Water Management in Dry Areas* (2001), *Sustainable Management of Marginal Drylands* (2003), *Challenges of Drylands in the New Millennium* (2004), *Desertification and the International Policy Imperative* (2007), and *What Makes Traditional Technologies Tick* (2009). He co-chaired the Millennium Ecosystem Assessment team that produced the global desertification synthesis. He has also served on the editorial boards of *Sustainability Science* (Springer) and *Global Environmental Change* (Elsevier Science). He has studied formulation of environmental policy and governance at several levels; his book on this topic is *East Asian Perspectives in Environmental Governance – Response in a Rapidly Developing Region* (UNU Press 2003). He serves as an Adjunct Professor of Engineering at the McMaster University.

Address: Dr. Zafar Adeel, United Nations University Institute for Water, Environment and Health (UNU-INWEH), 175 Longwood Road South, Suite 204, Hamilton Ontario, L8P 0A1 Canada.

John Emeka Akude (Germany/Nigeria), Dr. rer. pol., Lecturer, Research Fellow at the Chair of International Relations, Seminar for Political Science, University of Cologne. He obtained the following degrees: B. Sc. (Hons.) Political Science, University of Nigeria, Nsukka; M. Sc. International Relations, University of Ife, Ile-Ife, Nigeria; PhD in International Relations, University of Cologne, Germany. Among his major publication are: *Governance and Crisis of the State in Africa: the Dynamics and Context of the Conflicts in West Africa* (London: Adonis & Abbey Publishers, 2008); "Transformation Politischer Ordnung – Eine Erweiterung des Transformation Begriffs", in: *Zeitschrift für Politik*, 56, 2 (2009): 143-162; (with Anna Daun, David Egner and Daniel Lambach): "Recipe for Strife: Conflicts in West Africa's Weak States And Their Connections to the Global Market", in: *Development and Cooperation* (D+C), Nr. 6 (June 2009); 41-44; "Koloniale Ausbeutung – Wirtschaftliche Zusammenarbeit: Das ökonomische Interesse Europas an Afrika", in: *et cetera ppf*, 1/2009 (April): 8-19; "Krisen und Krisenmanagement in Westafrika", in: Feichtinger, Walter (Ed.): *Afrika im Blickfeld: Kriege – Krisen – Perspektiven* (Baden Baden: Nomos Verlag, 2004): 85-110; "Zwischen Wunschdenken und Ohnmacht: Der Anspruch der Afrikanischen Union auf Krisenmanagement in Afrika", in: Feichtinger, Walter; Hainzl, Gerald (Eds.): *Krisenherd Nordostafrika: Internationale oder afrikanische Verantwortung* (Baden Baden: Nomos Verlag, 2005): 65-88; *Historical Imperatives for the Emergence of Development and Democracy: A Perspective for the Analysis of Poor Governance Quality and State Collapse in Africa*. Working Paper for International Politics and Foreign Policy, Nr. 1/2006 (Cologne: University of Cologne, Seminar for Political Science, Chair of International Relations); *The Failure and Collapse of the African States: On the example of Nigeria*. Commentary Paper (Madrid: Fundacion para las Relaciones Internationales y el Dialogo (FRIDE), September 2007); at: <http://www.fride.org/ publication/262/the-failure-and-collapse-of-the-african-state-on-the-example-of-nigeria>; *A Political Economy of Bad Governance, Underdevelopment and State Collapse in Africa: The Dynamics of the West African Conflict* (PhD Dissertation, University of Cologne, unpublished).

Address: Dr. John Emeka Akude, Vogelsanger Strasse 498, 50829 Köln, Germany.
E-Mail: <john.akude@uni-koeln.de>.

Nisreen Daifallah Al Hmoud (Jordan) obtained a Ph.D. in Microbiology from the University of Abertay, Dundee/Scotland in 2002. In 2003, she joined the *Royal Scientific Society* (RSS) of Jordan as a Researcher at the *Environment Research Centre* (ERC). In 2006, she became the head of the *Water Quality Studies Division* (WQSD) at ERC. Since then, she has been supervising the execution of project contracts (environmental monitoring programmes and applied researches) at WQSD. She is an environmental microbiologist with an experience in the following topics: biofouling, bio-solids, wastewater and greywater. She executed and supervised the following projects: *Integrated Greywater Management Policies for Large Water Consumers in Vulnerable Communities in Jordan; Safe Use of Greywater for Agriculture in Jerash Refugee Camp: Focus on Technical, Institutional and Managerial Aspects of Non-Treatment Options; Bio-solids Characterization, Treatment and Application for agricultural lands*. She is a member in a number of international societies for microbiology and a referee for the *Journal of Applied Microbiology*. In August 2007, she was nominated to represent the Hashemite Kingdom of Jordan in two technical meetings at the United Nations Headquarter

in New York for updating the *Technical Guidelines and Procedures for the Investigation of Alleged Use of Chemical, Biological, or Toxin (CBT) Weapons*. Since January 2009, she has been heading the group of Bio-safety at ERC and she is a member in the *National Bio-safety Committee*. Besides working at RSS, she has a teaching experience in *Medical Microbiology* at the University of Jordan and she is appointed as an Assistant Professor at Princess Sumaya University for Technology, teaching a *Master Programme in Environmental Technology and Management*. Since 2005 she published several peer-reviewed papers and books chapters.

Address: Dr. Nisreen AL-Hmoud, Head of Water Quality Studies Division, Head of Bio-safety Unit, Environment Research Centre, Royal Scientific Society, P.O. Box 1438, Al Jubeiha 11941, Amman, Jordan.
Email: <nisreen@rss.gov.jo> and <nisreen22278@hotmail.com>.

Francisco Alonso-Sarriá (Spain), PhD in geography, Lecturer at the University of Murcia and subdirector of its *Institute of Water and Environment* (INUAMA). He obtained a first degree on geography from the University of Murcia in 1989. His thesis focused on quantitative morphometrical properties of basin and drainage networks. In 1991 he obtained an MSc on water science and technology and in 1995 he obtained a PhD from the University of Murcia with a thesis that focused on event-oriented modelling of a semi-arid basin applying the Geomorphologic Unit Hydrograph by using *Geographical Information Systems* (GIS) (Idrisi 4.1) and developing new hydrologically-oriented modules with Basic. Between 1991 and 1997 he participated in international projects (Medalus II and III) and in several projects funded by Spanish research programmes. In 1997 he started as an assistant lecturer in the Geography Department of the University of Murcia. From 1999 and 2000 he was a postdoctoral fellow at King's College in London working with professor J.B. Thornes. In 2001 he obtained a position as a permanent lecturer focusing mainly on topics of GIS and remote sensing for degrees in geography and environmental sciences. Besides his teaching activities conducted research and technical activities at INUAMA of the University of Murcia. His primary research interest is GIS and remote sensing applied to hydrology and hydrogeomorphology. He is responsible for a number of projects on the use of GIS and remote sensing data to improve hydrological modelling efforts.

Address: Dr. Francisco Alonso-Sarriá, Instituto Universitario del Agua y del Medio Ambiente, Universidad de Murcia, Campus de espinardo, 30100 Espinardo, Murcia, Spain.

Kwesi Aning (Ghana), Head, *Conflict Prevention Management and Resolution Department* (CPMRD) of *the Kofi Annan International Peacekeeping Training Centre* (KAIPTC) in Accra, Ghana since January 2007. Prior he served as the African Union's first expert on counter-terrorism, defence and security with responsibility for implementing the continental counter-terrorism strategy and oversight of the *African Centre for the Study and Research on Terrorism* (ACSRT) in Algiers, Algeria. He holds a doctorate from the University of Copenhagen, Denmark. His primary research interests deal with African security issues broadly, comparative politics, terrorism and conflicts. He has taught in several universities in Europe and Africa. In 2007, he served as a senior consultant to the UN Department for Political Affairs, New York and completed a UN Secretary-General's report on the relationship between the UN and regional organizations, particularly the African Union in maintaining peace and security. He reviews for several scholarly journals and serves on diverse boards. His publications include: "Perspectives on President-elect Barack Obama's Africa Foreign Policy", in: *African Security*, 1939-2214, 2,1 (1 January 2009): 66-67; (with Samuel Atuobi): "Responsibility to protect in Africa: an analysis of the African Union's Peace and Security architecture", in: *Journal of the Global Responsibility to Protect*, 1,1 (February 2009): 90-113 "The UN and the African Union's security architecture: defining an emerging relationship?", in: *Critical Currents*, No. 5 (October): 9-25; (with Thomas Jaye; Samuel Atuobi): "The Role of Private Military Companies in US-Africa Policy", in: *Review of African Political Economy*, 35,118 (2008):613 – 628.

Address: Dr. Kwesi Aning, Kofi Annan International Peacekeeping Training Centre, CMT 210, Cantonments, Accra, Ghana.
E-mail: <kwesianing2002@yahoo.com> and: <Kwesi.aning@kaiptc.org>.
Website: <www.kaiptc.org>.

Mamdouh Ahmed Antar (Egypt), Manager of the Nile Forecast Centre, Ministry of Water Resources and Irrigation, Planning Sector, Cairo. His Ph.D. focused on water resources management using hydrological modelling with emphasis on the utilization of newly developed modelling techniques such as *Artificial Neural Networks* (ANN) in combination with Satellite images. The Nile forecasting centre deals with flood management policies and the assessment of climate impacts on the *High Aswan dam* (HAD). He managed the project titled 'Lake Nasser Flood and Drought Control – Integration of Climate Change Uncertainty LNFDCP/ICC' that focused on assessing the foreseen impacts of climate changes and potential development projects on Nile Basin countries. As national coordinator of the *climate change risk management* (CCRM) he promoted the adoption of a *Regional Circulation Model* (RCM) as a way of identifying the possible range of climate change impacts on precipitation in the Nile Basin, and to adapt the existing hydrological models to forecast climate change impacts on Nile river flows. He coordinated the 'national flood preparedness and early warning (FPEW) project', one of the Fast Track projects under the *Nile Bain Initiative* (NBI). Among his major publications is: (with Elassiouti, I.; Allam, M. N., 2006): "Rainfall-runoff modelling using artificial neural networks technique: a Blue Nile catchment case study", in: *Hydrological Process*., 20, 1201–1216.

Address: Dr. Mamdouh Ahmed Antar, full mailing address please.
Email: <m_antar2000@yahoo.com>.

Carolin E. Arndt (Germany), Dr. scient., Programme Officer with the *Intergovernmental Panel on Climate Change* (IPCC) Secretariat; Scientific Consultant for the *World Climate Research Programme's* (WCRP) Joint Planning Staff (2006-2009). Main areas of expertise: sea ice dynamics (Arctic/Antarctic), biological oceanography and ecosystem analysis. Publication highlights: (Ed.): *Climate Research in Service to Society* (Geneva: WCRP, 2008); (Ed.): *WCRP Accomplishment Report* 2007-2008*: Providing the Science to Climate Change Solutions* (Geneva: WCRP, 2007); (Ed.): *WCRP Annual Report* 2006-2007*: New Futures: Building on Great Success* (Geneva: WCRP, 2006); (Ed.): *WCRP Annual Report* 2005-2006 (Geneva: WCRP, 2007).

Address: Dr. Carolin E. Arndt, IPCC, c/o WMO, 7 bis Avenue de la Paix, Case Posta-le No 2300, CH-1211 Geneva, Switzerland.
Email: <CArndt@wmo.int>; <CArndt@in-science.ch>.

Tulio Arredondo (Mexico), Ph.D., agronomist with graduate studies in ecology and management of drylands at the Utah State University, USA. With 20 years of experience in research dealing with conservation, restoration and management of drylands, in particular the extensive grazing systems in Northern Mexico. His current research topics focus on the impacts of global environmental change on the drylands of Northern Mexico. In particular, he is trying to understand the role of land use change on the functioning of semi-arid forest and grasslands. To advance the understanding of these phenomena at regional scales he is leading a network (GRACILIS) that covers a 1200 km strip along the semi-arid grassland biome establishing and implementing similar research protocols in several sites. His current publications deal with the impacts of overgrazing on hydrologic function, genetic integrity of keystone species and organisms interactions of semiarid grasslands: "Fine-scale spatial genetic structure in perennial grasses in three environments", in: *Rangeland Ecology and Management* (2009): "Biological soil crusts exhibit a dynamic response to seasonal rain and release from grazing with implications for soil stability", in: *Journal of Arid Environments* (2009); "Root Responses to Short-Lived Pulses of Soil Nutrients and Shoot Defoliation in Seedlings of Three Rangeland Grasses", in: *Rangeland Ecology and Management* (2009); "Production and quality of senesced and green litterfall in a pine-oak forest in central-northwest Mexico", in: *Forest Ecology and Management* (2009); "Grazing effects on fungal root symbionts and carbon and nitrogen storage in a shortgrass steppe in Central Mexico" in: *Journal of Arid Environments* (2008).

Address: Dr. Tulio Arredondo, Division Ciencias Ambientales (IPICYT), Camino de la Presa de San Jose # 2055, Lomas 4ta seccion, San Luis Potosi, SLP CP 78216, Mexico.

Andrews Atta-Asamoah (Ghana) is a Senior Researcher in the *African Conflict Prevention Programme (ACPP)* at the *Institute for Security Studies* (ISS). Prior to his current position based in Nairobi, Kenya, he was a Research Associate at the *Conflict Prevention, Management and Resolution Department (CPMRD)* of the *Kofi Annan International Peacekeeping Training Centre (KAIPTC)* in Accra, Ghana. He holds a Master of Arts degree in International Affairs from the *Legon Centre for International Affairs* (LECIA) at the University of Ghana and a bachelor's degree from the *University for Development Studies* (UDS) in Ghana. He conducts research on peace and security issues in Africa and has authored numerous articles and book chapters among which are: "Sanctions and Embargoes in Africa: Implementation dynamics, prospects and challenges in the case of Somalia", *ISS Paper* 180 (Pretoria, Institute for Security, 2009); "Mühsame Suche nach afrikanischen Lösungen Afrikanische Friedensmis sionen brauchen häufig westliche Hilfe", in: *Weltsichten*, 1,7 (July): 31-33;"Counter-Terrorism and the National Security of African States: Points of Convergence and Departure", in*: Journal of Security Sector Management*, Cranfield: Cranfield University, 2008; and "Understanding the West African Cyber Crime Process", in: *African Security Review,* 18,4, 2009, 106-114.

Address: Mr. Andrews Atta-Asamoah, Institute for Security Studies (ISS), P.O. Box 12869-00100, Nairobi, Kenya.

Mustafa Aydin (Turkey) is Professor of International Relations and Rector at Kadir Has University, Istanbul, Turkey, as well as the President of the International Relations Council of Turkey. Previously he served as the Head of International Relations Department at the University of Economics and Technology, and the Director of *International Policy Research Institute* (IPRI) of Ankara. He was UNESCO Fellow at the Richardson Institute for Peace Studies, UK (1999); Fulbright Scholar at the JFK School of Government, Harvard University (2002); Alexander S. Onassis Fellow at the University of Athens (2003); and Research Fellow at the EU Institute for Security Studies, Paris (2003). His most recent work includes *Central Asia in Global Politics* (in Turkish, 2004); *International Security Today; Understanding Change and Debating Security* (ed. with K. Ifantis, 2006); *Turkish Foreign and Security Policy* (ed. 2006); *Regional In/secuity: Redefining Threats and Responses* (ed., 2007); *Turkey's Eurasian Adventure* (in Turkish, 2007).

Address: Prof. Dr. Mustafa Aydin Kadir Has University, Cibali Campus, Kadir Has Caddesi, 34083 Cibali, Istanbul, Turkey.
E-Mail: <maydin@khas.edu.tr>.
Website: <http://www.khas.edu.tr>.

Alyson J.K. Bailes (UK) is currently Visiting Professor at the University of Iceland in Reykjavik, teaching on various aspects of security studies, and also teaches a security policy course at the College of Europe in Bruges. From July 2002-August 2007 she was Director of the *Stockholm International Peace Research Institute* (SIPRI), the first woman ever to hold that post. Her former career was spent largely in the British Diplomatic Service and included postings in Hungary, Germany, NATO HQ, China, Norway, and Finland where she served as Ambassador. She was posted in 1970-1974 in Hungary, where she learned her first foreign language. She went on to deal with arms control at the UK Delegation to NATO in Brussels, then had a sequence of home-based jobs including the EU internal policy desk; a temporary attachment to an EU 'Wise Men' study team on institutional reform; and an exchange posting to the British Ministry of Defence. She was posted again in 1981-1984 at the Embassy in Bonn, dealing with defence and Berlin-related matters. In 1984 she returned to the FCO as Deputy Head of Policy Planning Department. She was selected in 1986 to be the Deputy Head of Mission at the British Embassy in Beijing and began work there in 1987 after seven months learning Mandarin. She spent two and a half years in China, including the time of the Tian'anmen events, and during this period was part of the Sino-British negotiating team for the future of Hong Kong. On return to the UK she took a short academic sabbatical at the Royal Institute for International Affairs in London. In 1990-1994 she was Deputy Head of Mission at the British Embassy in Oslo, and in 1994-1996 Head of the FCO Security Policy Department. From 1996 to 1997 she was a Vice-President responsible for security policy programmes at the New York-based East-West Institute, and then became political director of the Western European Union, after which she was appointed ambassador of Great Britain in Finland. Her current research interests include European, Nordic and Arctic security issues and roles of non-state actors. Her 2009 book *Through European Eyes* and recent papers can be accessed at: <http://stofnanir.hi.is/ams>. She is a member of the Boards of several think-tanks, academic organizations and periodicals.

Address: Amb. Alyson J.K. Bailes, Strandvegur 12, ibud 0307, IS-210 Gardabaer, Iceland.
Email: <alyson@hi.is>.
Website: <http://stofnanir.hi.is/ams>.

Alex H. Barbat (Spain): Civil Engineer of Technical University of Iasi, Romania; Doctor of Civil Engineering of the *Technical University of Catalonia* UPC, Barcelona (Spain). He is Professor of Structural Mechanics at the Technical University of Catalonia (UPC). He conducts most of his research activity in the UPC's *International Centre of Numerical Methods in Engineering* (CIMNE), in the field of seismic damage evaluation for structures, stochastic simulation of the damage process and active and passive structural control, seismic risk evaluation and disaster preparedness. He published more than 60 articles in refereed international journals on these topics and collaborated in more than 14 projects of the European Commission. He is the President of the *Association for Earthquake Engineering* (AEIS) of Spain. He leads the Risk Management Group of CIMNE. He wrote various books; the last three are: *El riesgo sísmico en el diseño de edificios* (Madrid: Calidad Siderúrgica, 1998); *Diseño sismorresistente de edificios* (Barcelona: Reverté, 2000); and *El riesgo sísmico y su prevención* (Madrid: Calidad Siderúrgica, 2000).

Address: Prof. Dr. Alex H. Barbat, Calle Jordi Girona 1-3 Mod. C1. Campus Nord, Universidad Politécnica de Cataluña, Barcelona, Spain.
Email: <alex.barbat@cimne.upc.edu>.

Steffen Bauer (Germany) is a Senior Researcher at the *German Development Institute* (DIE) in Bonn and a research assistant to the *German Advisory Council on Global Change* (WBGU) since 2006. He is a political scientist at the DIE's department "Environmental Policy and Management of Natural Resources" with a focus on international organization and global environmental governance. He is also the Science and Technology Correspondent of Germany to the *United Nations Convention to Combat Desertification* (UNCCD). Recent research interests include security and development implications of climate change, the relevance of international secretariats in global environmental governance, and adaptation to climate change and desertification with a regional focus on Sub-Sahara Africa. He has published inter alia in: *Climate and Development*, *Global Environmental Politics*, *Global Environmental Change, Journal of Environment and Development* and in the *Review of International Organizations* and has been a reviewer for the Millennium Ecosystem Assessment, UNEP's Global Environment Outlook as well as a host of academic

journals including *Climate Policy*, *Land Degradation and Development*, *International Environmental Agreements* and *Global Environmental Politics*. He is co-editor of *Adaptation to Climate Change in Southern Africa: New Boundaries for Development* (with Imme Scholz, Earthscan 2010), and of *A World Environment Organization: Solution or Threat for Effective International Environmental Governance*? (with Frank Biermann, Ashgate 2005), and one of the lead authors of *Managers of Global Change: The Influence of International Environmental Bureaucracies* (edited by Frank Biermann and Bernd Siebenhüner, MIT Press 2009).

Address: Mr. Steffen Bauer, German Development Institute (DIE), Tulpenfeld 6, 53113 Bonn, Germany
Email: <steffen.bauer@die-gdi.de>.
Website: >http://www.die-gdi.de>.

Ulrich Beck (Germany) is Professor for Sociology at the University of Munich, and has been the British Journal of Sociology LSE Centennial Professor in the Department of Sociology since 1997. See *biographies of authors of forewords and preface essays*.

Arno Behrens (Germany) holds a Master's degree in economics and is about to finish his PhD on dematerialisation and decarbonisation issues. He is Research Fellow and Head of Energy at the Unit for Energy and Climate Change of the *Centre for European Policy Studies* (CEPS). Before that, he worked as Second Secretary at the German Federal Foreign Office in the context of the 2007 German Presidency of the European Union. Other main cornerstones of his career include the European Commission (DG Development), the Sustainable Europe Research Institute (SERI), and the United Nations Development Programme (UNDP). He published numerous articles and reports focusing on European responses to energy and climate change issues as well as policy options in support of sustainable development. Publications include *'The Financing of the Global Energy Efficiency and Renewable Energy Fund (GEEREF)* (2009), a Briefing Paper prepared for the European Parliament, and a CEPS Policy Brief, *Learning from the Crisis: A Market Approach to Securing European Natural Gas Supplies* (2009). He also published a CEPS Task Force Report with C. Egenhofer entitled *Energy Policy for Europe - Identifying the European Added-Value* (2008). Other publications focus on energy security of supply in Europe, as well as on the financial impacts of climate change.

Address: Mr. Arno Behrens, Centre for European Policy Studies (CEPS), 1, Place du Congres, 1000, Brussels, Belgium.
Email: <Arno.Behrens@ceps.eu> (office).

Richard Betts (UK) is Head of Climate Impacts at the Met Office Hadley Centre, the UK government's research centre for climate change. He has a Bachelor's degree in Physics, a Master's in Meteorology and Climatology, and his PhD thesis examined the role of the world's ecosystems in climate change. He has worked in climate modelling for 16 years, with a particular interest in the impacts of climate change on ecosystem services and the interactions with other impacts of climate change such as on water resources. He is also interested in the wide-ranging effects of land use and land cover change on climate. He has pioneered a number of key developments in the extension of climate models to include biological processes, and has published over 50 peer-reviewed scientific papers and other articles. As a lead author of the *Intergovernmental Panel on Climate Change* (IPCC 2007), he lead the assessment of the influences of land cover change on climate and contributing to the assessment of climate change impacts on fresh water. He played a similar role in the Millennium Ecosystem Assessment. He was a leading peer-reviewer of the *Stern Review of the Economics of Climate Change* (2006). Among his major publications are: (with Boucher, O.; Collins, M.; Cox, P.M.: Falloon, P.D.; Gedney, N.; Hemming, D.L.; Huntingford, C.; Jones, C.D.; Sexton, D.M.H.; Webb, M.J., 2007): "Projected increase in future river runoff through plant responses to carbon dioxide rise", in: *Nature*, 448: 1037-1042; (2007): "Implications of land ecosystem-atmosphere interactions for strategies for climate change adaptation and mitigation", in: *Tellus B*, 59,3: 602-615.

Address: Dr. Richard Betts, Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.
Email: <richard.betts@metoffice.gov.uk>.
Website: <www.metoffice.gov.uk>.

Issa Martin Bikienga (Burkina Faso) is Deputy Executive Secretary of the *Comité permanent Inter-Etats de Lutte Contre la Sécheresse dans le Sahel* (CILSS). He studied in Germany and France and received an agricultural engineering degree (University of Kassel, Federal Republic of Germany); a degree from the *Centre d'Etudes Financières, Economiques et Bancaires* (Paris), and a degree from the *Institut de Formation Agronomique et Rurale des Régions Chaudes* (Montpellier, France). Since January 2003 he has worked with CILSS as coordinator of policy programmes on food security, natural resources management, desertification control and since February 2005 as Deputy Executive Secretary. From October 1999 to November 2000 he was Minister of Agriculture in Burkina Faso; from July 1996 to October 1999 he was Secretary-General of the Ministry of Agriculture and Animal Resources; from 1985 to 1995 he worked as operations manager for the *Société Sucrière de la Comoé*, in 1984 he was manager of a groundnuts project and from 1979 to 1983 he managed a phosphate project. He is officer of the *Ordre National Burkinabè* and member of the *Association of Tropical Agricultural Engineers* (Witzenhausen, Germany) and of the *West and Central African Soil Science Association* (Ouagadougou, Burkina Faso). His publications include: *Role and methodology of feasibility study formulation within the context of irrigation project planning* (1979, in German); *La commercialisation des engrais en Haute - Volta* (Rome: FAO-FIAC, 1983); *Les contraintes à l'utilisation des engrais en Haute-Volta dans le développement des cultures vivrières* (Paris: Centre d'Etudes Financières, Economiques et Bancaires, 1984); "Sur l'efficacité agronomique du phosphate naturel de KODJARI", in: N*otes et Documents Burkinabé*, 16,3-4 (July-December 1996); "Zur Anwendung des landeseigenen

Rohphosphates in der Landwirtschaft Burkina Faso", in: *Der Tropenlandwirt. Zeitschrift für die Landwirtschaft in den Tropen und Subtropen* (in German, 1985); "The Sugar Cane Irrigation Problems in the Sahel Region. Burkina Faso as a Case Example (West Africa)", in: *Zeitschrift für Bewässerungswirtschaft* (1989, in German); "The Drought in the Sahel Region and its Consequences on Water Supply Projects", in: *Zeitschrift für Bewässerungswirtschaft* (1992, in German); *Proposition de quelques technologies pratiques pour la restauration et le maintien de la fertilité des sols au Burkina Faso* (Ouagadougou: Ministère de l'Agriculture, Unité de Gestion de la Fertilité des Sols, 1995); *Production agropastorale au Burkina Faso* (Ouagadougou: Université de Ouagadougou, 1996); *Rentabilité financière et rentabilité économique. Principes généraux et cas pratiques des entreprises et projets de production agricole* (1997); *Développement humain durable. Contenu du Concept et implications pour la recherche Scientifique au Burkina Faso* (1998) ; *Quelle politique de sécurité alimentaire pour le Burkina au XXIè siècle ?* Forum de la Recherche Scientifique et Technologique (2000).

Address: Mr. Issa Martin Bikienga, *Comité permanent Inter-Etats de Lutte Contre la Sécheresse dans le Sahel* (CILSS), 03 BP 7 156 - Ouagadougou 03, Burkina Faso.
Email: <issa.bikienga@cilss.bf> and <issa_bikienga@yahoo.fr>.
Website: <www.cilss.bf>.

Jörn Birkmann (Germany) is Academic Officer and Head of the Vulnerability Assessment Section at the United Nations University - Institute for Human Security and Environment (UNU-EHS). See *biographies of editors*.

Hans Jürgen Boehmer (Germany) is a vegetation ecologist, currently working as a Senior Research Scientist and Managing Director at the *Interdisciplinary Latin America Center* (ILZ) of the University of Bonn, Germany. He gained a first degree in geography, political sciences, and communication sciences from the University of Bamberg, Germany, (1990), and his MSc. degree in geography with a specialization in biogeography (1993) at the University of Erlangen-Nuremberg (Germany). A PhD (1998, Dr. rer. nat., University of Erlangen-Nuremberg) for a dissertation on "Vegetation Dynamics in High Mountain Regions under Impact of Natural Disturbances." After several years of a post doctoral research in Hawaii's rainforests (Post Doctoral Fellow at the Botany Department, University of Hawaii, U.S.A., with Dieter Mueller-Dombois), he completed his habilitation thesis on "Dynamics and Invasibility of Hawaii's Montane Rainforests" and obtained his habilitation at the Department of Ecology, Technical University of Munich, Germany, in 2006. In 2007, he was appointed to be Adj. Professor (Priv.-Doz., PD) at the same department. His research focuses on vegetation dynamics under the impact of natural and human disturbance, particularly on the complex interactions of natural vegetation dynamics, disturbance regimes, biological invasions, and climate change. He has field experience in a wide range of ecosystems in different ecozones. His recent publications include works on plant diversity and dynamics of used and natural tropical montane rain forests in East Africa and the Pacific region, and the ecological and societal consequences of biological invasions. Among his major publications are: (with M. Richter): *"Regeneration of plant communities – an attempt to establish a typology and a zonal system"* (1997); *Vegetationsdynamik im Hochgebirge unter dem Einfluss natuerlicher Stoerungen* (Stuttgart – Berlin: Borntraeger 1999); *Case Studies on Alien Species in Germany* (Berlin: German Federal Environmental Agency 2001); (co-author with Ch. Schmitt): *"Floristic diversity in fragmented Afromontane rainforests: altitudinal variation and conservation importance"* (2009); (co-author with V. Minden):*"Effects of invasive alien Hedychium gardnerianum on native plant species regeneration in a Hawaiian rainforest"* (2009).

Address: Adj. Prof. (PD) Dr. Hans Juergen Boehmer, Interdisciplinary Latin America Center (ILZ), University of Bonn, Walter-Flex-Strasse 3, 53113 Bonn, Germany.
Email: <HJ.Boehmer@uni-bonn.de>.
Website: <http://www.wzw.tum.de/loek/mitarbeiter/boehmer/>.

Peter Bosch (The Netherlands) was Coordinator and Editor of the 2007 report of the *Intergovernmental Panel on Climate Change* (IPCC) working group III on mitigation of climate change. Before he was employed at the *European Environment Agency* in Copenhagen as a specialist on environmental indicators. He has coordinated and edited a series of pan-European state of the environment and environmental indicator reports. He was educated as a physical geographer, and has worked for many years in environmental statistics at *Statistics Netherlands*, working, among others, on a project to calculate a sustainable national income indicator for The Netherlands. Among his major publications are: *Climate Change 2007, Mitigation of Climate Change, IPCC*; *Europe's Environment*, the second and the third assessment (Copenhagen: European Environment Agency, 1998 and 2003 respectively).
Address: Mr. Peter Bosch, TNO-environment, P.O. Box 80015; 3508 TA Utrecht; The Netherlands.
E-mail: <peter.bosch@tno.nl>.
Website: <http://www.ipcc.ch/ipccreports/ar4-wg3.htm>.

Hans Günter Brauch (Germany), Privatdozent (Adj. Prof.) at the Faculty of Political Science and Social Sciences, Free University of Berlin, since 1987 chairman of *Peace Research and European Security Studies* (AFES-PRESS). See *Biographies of editors*.

Carlo Buontempo (Italy/UK) Senior Scientist in Climate Impacts at the Met Office Hadley Centre. He obtained his Bachelor's degree in Physics at University of Rome with a thesis on ground-based measurements of cloud water content. After working on boundary layer processes for a couple of years he started his PhD research on tropical convection at University of Aquila. Over the last 10 years he has been developing numerical weather and regional climate models. In his current role he provides specialist advice to companies and policymakers on how to increase their capacity in dealing with climate risk. He has an excellent track record of publications communicating complex scientific information to both specialists and the general public. Among his major recent publications are: (with Scaife,

Adam; Ringer, Mark; Sanderson, Michael; Gordon, Chris; Mitchell, John. 2009): "Toward seamless Prediction Calibration of Climate Change Projections Using Seasonal Forecasts", in: *Bulletin of the American Meteorological Society* (in press); (with Brookshaw, Anca; Arribas, Alberto; Mylne, Ken, 2010): "Multi-Scale Projections of Weather and Climate at the UK Met Office"; in: Troccoli, A. (Ed.): "Management of Weather and Climate Risk in the Energy Industry". NATO Science Series, (Dordrecht: Springer Academic Publishers).

Address: Dr. Carlo Buontempo, Met Office Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.
Email: <carlo.buontempo@metoffice.gov.uk>.
Website: <http://www.metoffice.gov.uk>.

Jean-Francois Bureau (France) has been Assistant Secretary General for Public Diplomacy of NATO since 2007. See *Biographies of authors of forewords and preface essays.*

Antonio [Tony] J. Busalacchi (USA), Ph.D., Director of the *Earth System Science Interdisciplinary Center* (ESSIC) and Professor in the Department of Atmospheric and Oceanic Science; Chair, Joint Scientific Committee, World Climate Research Programme (WCRP). Before 2000, he served as Chief of the NASA Goddard Laboratory for Hydrospheric Processes. Main areas of expertise: climate variability and predictability, tropical ocean circulation and its role in the coupled climate system. Publication highlights: (co-author with: J. Ballabrera, R. Murtugudde, RH Zhang): "Coupled Ocean-Atmosphere Response to Seasonal Modulation of Ocean Color: Impact on Interannual Climate Simulations in the Tropical Pacific", in: *Journal of Climatology*, 20 (2007): 353-374; (co-author with: J. Kroger, J. Ballabrera-Poy, P. Malanotte-Rizzoli): "Decadal variability of shallow cells and equatorial SST in a numerical model of the Atlantic", in: *Journal of Geophysical Research*, 110 (2003) C12003, <doi:10.1029/2004JC002703>; (co-author with: D. Chen, D., S. E. Zebiak, M. A. Cane): "An improved procedure for El Nino forecasting: Implications for predictability", in: *Science*, 269 (1995): 1699-1702.

Address: Dr. Antonio J. Busalacchi, Earth System Science Interdisciplinary Center (ESSIC), Suite 4001, M Square Office Building, #950, 5825 University Research Court, University of Maryland, College Park Maryland 20740, USA.
Email: <tonyb@essic.umd.edu>.

Michael Butts (New Zealand, Denmark) is currently Head of Innovation for Water Resources and Environmental Management at DHI. He obtained his 1st class Honours degree in Physics from the University of Canterbury, New Zealand and MSc & PhD in Hydrology from the Technical University of Denmark. He has more than 20 years of professional experience in hydrology, including hydrological fieldwork and data analysis, network design and the development and application of hydrological databases and the development and application of integrated models in water resources and water quality projects. He has worked on water resources and flood management projects in the United States, Bangladesh, India, Hong Kong, China, Central America, Denmark, Poland and the United Kingdom. He was the scientific co-coordinator for the EU flood forecasting research project FLOODRELIEF (2003-2007). He is currently Associate Editor of the Journal of Hydrology (2007-), and on the Editorial Board, UK (ICE) *Water Management Journal*. Among his major recent publications are: (with Boegh, E.; Poulsen, R.N.; Abrahamsen, P.; Dellwik, E.: Hansen, S.; Hasager, C.B.; Loerup, J.-K.; Pilegaard, K.; Soegaard, H., 2009): "Remote sensing based evapotranspiration and runoff modeling of agricultural, forest and urban flux sites at Sjælland: from field to macro-scale", in: *Journal of Hydrology* 37,3-4: 200-216; (with Overgaard J.; D Rosbjerg, 2005): "Land-surface modelling in hydrological perspective", in: *Biogeosciences Discussions*, 2: 1815–1848, at: <www.biogeosciences. net/bgd/2/1815/>; (with Payne, J. T.; Kristensen, M.; Madsen, H., 2004): "An evaluation of the impact of model structure on hydrological modelling uncertainty for streamflow prediction", in: *Journal of Hydrology*, 298,1-4: 242-266.

Address: Dr. Michael Butts, Agern Alle 5, DK 2970, Hørsholm, Denmark.
Email: <mib@dhigroup.com>.

Vivienne Caballero (Colombia), Climate Change Programme Specialist at the Environment and Energy Group, Bureau for Development Policy in UNDP (*at the time of writing*). Currently, Programme Officer at the UNDP-UNEP Poverty and Environment Initiative in the Regional Office for Latin America and the Caribbean based in Panama. Her experience includes global climate change policy and water governance issues, as well as mainstreaming of climate change policies into national development policies and processes in Latin America. She holds degrees in environmental science with specialization in biology from the University of Idaho, and in science and environmental writing from New York University where she also conducted studies in international affairs and non-governmental organizations. She has authored and co-authored articles in the environmental field and on institutional capacity development. Among her major publications: (co-author with Gomez-Echeverri, Luis, 2008): „Desarrollo Institucional y Creación de Capacidades en el Desarrollo Internacional", in: Alonso, Gabriel; Jiménez, Juan Carlos (Coord.): *Fortalecimiento Institucional y Desarrollo* (Madrid: Editorial Biblioteca Nueva): 47-60.

Address: Ms. Vivienne Caballero, Programme Officer, UNDP-UNEP Poverty and Environment Initiative at the Regional Office for Latin America and the Caribbean, Building 103 Av Morse, City of Knowledge, Panama City, Panama.
Email: <vivienne.caballero@unep.org>.
Website: <www.undp.org/pei>.

Osvaldo Francisco Canziani (Argentina) Ph.D., was Co-Chair of Working Group II of the *Intergovernmental Panel on Climate Change* (IPCC) for its Third and Fourth Assessments, and Vice-Chair of the IPCC Working Group II for the Second Assessment. He was Professor of Meteorology at the University of Buenos Aires, and at the University of Asunción and La Molina (Lima, Peru). He was also the

UNDP Resident Representative in Paraguay and the Regional Director of the World Meteorological Organization for The Americas and the Caribbean. He is currently an advisor to the General Directorate of the Environment, Ministry of Foreign Relations in Argentina; advisor to the Hong Kong Climate Change Forum; technical advisor, International Court of Justice, The Hague; academician, Argentina Academy of Environmental Sciences; member of the Editorial Board of *Regional Enviropnmental Change* (Springer). Furthermore, he teaches in postgraduate courses in various national and private universities, including the University of Belgrano, Buenos Aires. He obtained many prizes among them: Prize Senator Domingo Faustino Sarmiento by the National Senate of the Argentine Republic (2009); 2008 Human Rights Prize of the B´nai B´rith Association (2008); Juntos Educar 2008 by the Archbishop of Buenos Aires and Cardinal of Argentina; Professor h.c. of the National Universities of Bahía Blanca and Córdoba (Argentina) (2008); co-recipoient of the 2007 Peace Nobel Prize as a Member of the IPCC Bureau. He has published over 100 research papers, book chapters and conference proceedings. He obtained a diploma of Imperial College (1948), a MSc in meteorology of London University (1948) and a Ph.D. in meteorology of Universidad de Buenos Aires (1953).

Address: Prof. Dr. Osvaldo F. Canziani, Av R. Scalabrini Ortiz 1978, 1425 Buenos Aires, Argentina.

Omar Darío Cardona A. (Colombia): Civil Engineer of the *National University of Colombia* (UNC), Manizales; Doctor of Earthquake Engineering and Structural Dynamics of the *Technical University of Catalonia* (UPC), Spain. He is Professor and Researcher at the Institute of Environmental Studies of UNC and at the *Centre of Studies on Disasters and Risks* (CEDERI) of the *University of Los Andes* (UNIANDES) and visiting professor of the *International Centre of Numerical Methods in Engineering* (CIMNE) of the UPC in Barcelona and of the E*uropean University Centre for Cultural Heritage* (CUBEC) in Ravello. He is the former President of the *Colombian Association for Earthquake Engineering* (AIS) and General Director of the *National Directorate of Disaster Prevention and Attention* (DNPAD). He has been a consultant of the *Inter-American Development Bank* (IDB), of the World Bank, UNDP, and other international agencies. He is a founding member of the *Latin American Network of Social Studies on Disaster Prevention* (LA RED). He is the Coordinator Lead Author of the chapter on "Determinants of Risk: Vulnerability and Exposure" of the IPCC Special Report on *Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation* (SREX). In 2004 he was awarded the UN Sasakawa Disaster Prevention Prize "in recognition of his outstanding research contributions to knowledge and innovative practices for vulnerability assessment and disaster risk reduction worldwide." *Publications:* He has several publications in Spanish. Recent *English* books and chapters include: "A System of Indicators for Disaster Risk Management in the Americas", in: Birkmann, Jörn (Ed.), 2006: *Measuring Vulnerability to Hazards of Natural Origin: Towards Disaster Resilient Societies* (Tokyo: UNU Press): 189-209; "The Need for Rethinking the Concepts of Vulnerability and Risk from a Holistic Perspective: A Necessary Review and Criticism for Effective Risk Management", in: Bankoff, Greg; Frerks, Georg; Hilhorst, Dorothea (Eds.), 2004: *Mapping Vulnerability: Disasters, Development and People* (London: Earthscan); (co-author with Carreño, Martha-Liliana; Barbat, Alex H., 2006): "Neuro-Fuzzy Assessment of Building Damage and Safety After an Earthquake", in Lagaros, Nikos D.; Tsompanakis, Yiannis. (Eds): *Intelligent Computational Paradigms in Earthquake Engineering* (Hershey PA: Idea Group Inc.). Recent *English* journals publications include: (co-author with Carreño Martha-Liliana, Barbat Alex H., 2010): "Computational Tool for Post-Earthquake Evaluation of Damage in Buildings", in: *Earthquake Spectra*, 26,1 (February): 63–86; (co-author with Carreño, Martha-Liliana; Marulanda, Mabel-Cristina; Barbat, Alex H., 2009): "Holistic urban seismic risk evaluation of megacities: Application and robustness", in: Mendes-Victor, Luis A.; Sousa Oliveira, Carlos; Azevedo, J.; Ribeiro, A. (Eds.): *The* 1755 *Lisbon Earthquake: Revisited* (New York: Springer); (co-author with Marulanda, Mabel-Cristina; Barbat, Alex H., 2009): "Robustness of the holistic seismic risk evaluation in urban centers using the USRi", in: *Journal of Natural Hazards*, 49, 3 (June): 501–516; (co-author with Ordaz, Mario G.; Marulanda, Mabel-Cristina; Barbat, Alex H., 2008: "Estimation of Probabilistic Seismic Losses and the Public Economic Resilience – An Approach for a Macroeconomic Impact Evaluation", in: *Journal of Earthquake Engineering*, 12,S2, (January): 60-70; (co-author with Ordaz, Mario G.; Yamín, Luis E.; Marulanda, Mabel-Cristina; Barbat, Alex H., 2008): "Earthquake Loss Assessment for Integrated Disaster Risk Management", in: *Journal of Earthquake Engineering*, 12, S2, (January): 48–59; (co-author with Carreño, Martha-Liliana; Barbat, Alex H., 2007): "A disaster risk management performance index", in: *Journal of Natural Hazards*, 41, 1 (April): 1-20; (co-author with Carreño, Martha-Liliana; Barbat, Alex H., 2006): "Urban Seismic Risk Evaluation: A Holistic Approach", in: *Journal of Natural Hazards*, 40, 1 (January): 137-172.

Address: Prof. Dr. Omar Darío Cardona A., Carrera 19A 84-14, Of. 502/504, Bogotá, D.C., Colombia.

Monalisa Chatterjee (India) is a *doctoral candidate in the Department of Geography, Rutgers University, NJ, USA* working on "Urban Flood Loss Sharing and Redistribution Mechanisms among the Impoverished Industrial Population of Mumbai". Her research examines informal coping methods of poor urban flood victims and studies the impact of globalization on the changing nature of coping strategies. In her doctoral research she also explores the possibility of integrating poor population with more formal mechanisms of risk redistribution and loss sharing. Among her publications are: "Slum dwellers response to flooding events in the megacities of India", in: *Mitigation and Adaptation Strategies for Global Change*, 15,4 (2010): 337-353; "Urban Vulnerability – Case Study: Floods in Mumbai", in: Lever-Tracy,

Constance (Ed.): *Handbook for Climate Change and Society.* Routledge (i.p.); "Shifting Vulnerabilities: A Study in Flood Affected Slums of Mumbai". *Source* 10/2008 (Bonn: UNU-EHS): 100-109; (with Mitchell, James K.): 2007. "The Changing Environment", in: Auerbach, Paul S. (Ed.): *Wilderness Medicine: Management of wilderness and environental emergencies* (St. Louis: Mosby Year Book Inc., 52007): 2184-2198; "The Scope of Natural Hazard Insurance in Developing Countries", in: Feng, H. Lizhong Yu & William Solecki (Eds.): *Urban Dimensions of Environmental Change: Science, Exposures Policies and Technologies* (Monmouth, NJ: Science Press, 2005): 130-139.

Address: Ms. Monalisa Chatterjee, Department of Geography, Rutgers University, 54 Joyce Kilmer Blvd. Piscataway NJ 08854-8045 USA.
Email: <chaterje@eden.rutgers.edu> and: <ml_chatterjee@yahoo.co.in>.

Béchir Chourou (Tunisia) was Professor of International Relations at the University of Tunis-Carthage in Tunisia. See: *Biographies of editors*.

John A. Church (Australia), Ph.D., an Oceanographer with CSIRO, the *Centre for Australian Weather and Climate Research and the Antarctic Climate and Ecosystems Cooperative Research Centre*, a Principal Investigator on NASA/CNES Topex/Poseidon and Jason Science Working Teams since 1987, co-convening lead author for the chapter on Sea Level in the IPCC Third Assessment Report, Co-Chaired the World Ocean Circulation Experiment (1994-1998) and the World Climate Research Programme (2006-2008), a Fellow of the Australian Academy of Technological Sciences and Engineering. Awarded the 2006 Roger Revelle Medal by the Intergovernmental Oceanographic Commission, a CSIRO Medal for Research Achievement in 2006, the 2007 Eureka Prize for Scientific Research and presented the 2008 AMOS R.H. Clarke Lecture. He is a member of the IPCC team that won the 2007 Nobel Peace Prize. Publication highlights include: co-author with Neil J. White; Julie Arblaster): "Significant decadal-scale impact of volcanic eruptions on sea level and ocean heat content", in: *Nature*, 438 (2005): 74-77, <doi:10.1038/Nature04237>; (with N. J. White): "A 20th century acceleration in global sea-level rise", in: *Geophysical Research Letters*, 33 (2006) L01602, <doi:10.1029/2005GL024826>; (with Catia M. Domingues, Neil J. White, Peter J. Gleckler, Susan E. Wijffels, Paul M. Barker, Jeff R. Dunn): "Improved estimates of upper-ocean warming and its contribution to multi-decadal sea level-rise", in: *Nature*, 453 (2008): 1090-1093, <doi:10.1038/nature07080>; (coed. with Siedler, Gerold; Gould, John): *Ocean circulation and Climate, Observing and modelling the global ocean*. International Geophysics Series, vol. 77 (San Diego: Academic Press, 2001).

Cecilia Conde Álvarez (México), Dr. (National Autonomous University of Mexico, UNAM), Researcher of Climate Cchange and Climate Variability, Centre of Atmospheric Sciences of UNAM and chief of its Interdisciplinary Climate Change Programme. She is a Focal Point of the Nairobi Work Programme of the *United Nations Framework Convention on Climate Change* (UNFCCC). She has coordinated various interdisciplinary projects related to impacts, vulnerability and adaptation of climate variability and change, particularly on the agricultural sector, with the involvement of regional stakeholders. She has collaborated with the Mexican government in the elaboration of the Mexican National Communications, and with regional and local governments in the development of their Climatic Action Plans. She is a member of the *Council for Climate Change*, an organization of 23 scientists and decision makers that supports de Mexican federal government in the design of its National Strategy of Climate Change. She has participated in workshops for some Latin American countries (Belize, Ecuador, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua and Panama) supporting them in the development of their National Communications and in their projects related to the economy and climate change. She was co-author of the *Adaptation Policy Frameworks for Climate Change: Development Strategies, Policies and Measures,* published by the *United Nations Development Programme* (UNDP). She was lead author of two chapters for the *Intergovernmental Panel on Climate Change* (IPCC) that was awarded the Nobel Peace Prize in 2007. She has published books, reports and articles in *Atmosfera*, *Climate Research*, *Climatic Change*, and in *Applied Vegetation Science.*

Address: Dr. Cecilia Conde, Centro de Ciencias de la Atmósfera, UNAM, Ciudad Universitaria, Circuito Exterior, 04510, México, D.F., México.

Paul C. Crutzen (The Netherlands), Nobel Laureate for Chemistry in 1995; Member of the Max-Planck-Society for the Advancement of Science, Director Emeritus of the Atmospheric Chemistry Division, Max-Planck-Institute for Chemistry, Mainz, Germany (1980-2000). See *biographies of authors of forewords and preface essays.*

Mohammed Dajani Daoudi (Palestine), Ph.D, Ph. D. is a Professor of Political Science and International Relations; founding director, American Studies Institute, Al-Quds University and founding director of the Wasatia Moderate Islamic Movement in Palestine. He is a Jerusalem-born scholar and peace activist with two doctorate degrees in government (University of South Carolina, Columbia, SC, 1981; University of Texas, Austin, Texas, 1984). He is chairman. Board of Directors, House of Water and Environment; member, Board of Directors, YMCA-West Jerusalem; founding director, Jerusalem Studies and Research Institute. He was the founding director of the Palestinian Public Administration National Institute; senior consultant on public administration of the Palestinian Ministry of Planning and

International Cooperation. Between mid-1998 and 2004 he was director of the Technical Assistance and Training Department, (PECDAR), in charge of implementing a US$ 23-million World Bank Technical Assistance Trust Fund. Between 1995 and 1997 he worked as Chief Technical Advisor, *United Nations Development Programme* (UNDP), Programme of Assistance to the Palestinian People, providing training and consultancy services to the Palestinian Authority on public administration development and institution building. Between 1990 and 1995, he founded and acted as chairman of the Department of Political Science and Diplomacy, Applied Science University, Amman, Jordan. He frequently participates in local, regional and international conference, and is author and co-author of numerous academic books and articles in English and Arabic. He co-authored with Dr. Munther Dajani: *Economic Sanctions: Ideals and Experience* (London: Routledge and Kegan Paul,1983); *Economic Diplomacy* (Boulder, Colorado: Westview, 1985); *Al-Siyassa: Nazariat wa Mafaheem* [Politics: Concepts and Theories (Amman: Palomino Press, 1986); *al-Nizam al-Siyassi al-Urduni* [An Introduction to the Jordanian Political System] (Amman: Palomino Press, 1993); *Manhajiet al-Bahth al-Ilmi fi ilm el-Siyassa* [Scientific Research Methodology in Political Science] (Jerusalem: Al-Quds University and the Palestinian Center for Regional Studies, 1997); *Al-Democratia wal Ta'adudieh* [Democracy and Political Pluralism] (Al-Bireh: Palestinian Center for Regional Studies, 1998); *al-Hukum wa al-Idara* (Government and Administration (Jerusalem: al-Quds University, 2001); al-*Muqademah fi al-Ulum Al-Siassiyah* (Introduction to Political Science (Jerusalem: al-Quds University, 2009).He is author of: *Mu'jam al-Quds* [Quds Glossary of International Terms] (Jerusalem: Palestinian Center for Regional Studies, 2001); *Wasatia* (Jerusalem, Wasatia Publishing, 2007); *Wasatia: Min al-Nazaria ila Tatbik* [Wasatia: From Theory to Practice] (Jerusalem: Wasatia Publishing, 2008); *Biblioghrafia al-Quds al-Sharif* [A Bibliography of Arabic Books on Jerusalem] (Jerusalem: Wasatia Publishing, 2009); *Biblioghrafia al-Kutub al-Arabia on American Affairs* [A Bibliography of Arabic Books on American Affairs] (Jerusalem: Al-Quds University, 2009); *Wasatia: The Spirit of Islam* (Jerusalem: Wasatia Publishing, 2009).

Address: Prof. Dr. Mohammed Dajani Daoudi, P. O. Box 14085, Jaffa Gate, Jerusalem, Israel.
Email: <mohddajani@gmail.com> and < mohddajani@hotmail.com >.

Ashraf M. Dajani (Palestine), Ph. D. Candidate at the Law Department of the European University Institute in Florence, Italy. His doctorate dissertation is entitled "Jerusalem in international law". He received master degrees from the European University Institute, the University of Lund, and the University of Malta where he studied International Law, Human Rights and Democratization.

Address: Mr. Ashraf Al-Dajani, Department of Law, European University Institute, Via Boccaccio 121,1-50133, Florence, Italy.
Email: <Ashraf.Al-Dajani@eui.eu>, <ashraf.m.dajani@gmail.com>.

Simon Dalby (Canada), Ph.D. (Simon Fraser University, Vancouver), Professor of Geography, Environmental Etudies and Political Economy, Carleton University, Ottawa. His research work concerns critical geopolitics, environmental security and political ecology and increasingly how all these matters link up with contemporary discussions of empire, and modes of urban consumption in the metropoles of the global economy. His articles have appeared in diverse scholarly journals including: *Alternatives, Antipode, Australian Journal of International Affairs, Geopolitics, Global Environmental Politics, Intelligence and National Security, International Politics, Political Geography, Society and Space* and *Studies in Political Economy.* He is author of: *Creating the Second Cold War* (London – New York: Pinter and Guilford, 1990) and *Environmental Security* (Minneapolis: University of Minnesota Press, 2002); *Security and Environmental Change* (Cambridge: Polity, 2009). He is co-editor of: *Rethinking Geopolitics* (London: Routledge, 1998); *The Geopolitics Reader* (London: Routledge 11998, 22006) and of the journal *Geopolitics*.

Address: Prof. Dr. Simon Dalby, Department of Geography and Environmental Studies, Carleton University, 1125 Colonel By Drive, Ottawa, Ontario, K1S5B6 Canada.
Email: <sdalby@gmail.com>.
Website: <www.carleton.ca/~sdalby>.

Amb. Jayantha Dhanapala (Sri Lanka) has been President of the Pugwash Conferences on Science and World Affairs since November 2007. From 1998 to 2003 he was Under Secretary-General of the United Nations for Disarmament. See *biographies of authors of forewords and preface essays.*

Abdel Kader Dodo (Niger), Expert in Hydrogeology and in charge of the Water Programme and Manager of the *Iullemeden Aquifer System* (IAS) project at the *Sahara and Sahel Observatory* (OSS). He has PhD from the University of Neuchâtel in Switzerland focusing on groundwater deep flows in the great Niger basin. Since 1993, he has served as a senior lecturer and researcher at the Abdou Moumouni University in Niamey (Niger). Concurrently, in 2000, he was appointed as the national director for water resources at the Ministry in charge of water resource in the Republic of Niger. He joined OSS in 2004. He has published articles and co-authored books in hydrogeology and hydro-ecology. He was also engaged in several regional and international research activities. In 2006, due to his contribution at the national level, he became an *Officer in the National Order of Merit in the Republic of Niger*.

Address 1: Dr. Abdel Kader Dodo, Sahara and Sahel Observatory (OSS), Boulevard du Leader Yasser Arafat, BP 31, 1080, Tunis, Tunisia.
Address 2: Dr. Abdel Kader Dodo, Université Abdou Moumouni, Faculté des Sciences, Département de Géologie, BP 10662, Niamey, Niger.
Email: <abdelkader.dodo@oss.org.tn>.
Website: <www.oss-online.org>.

Frédéric Dumay (France), Research Engineer, specialist in remote sensing for dry ecosystems. He works on desertification in drylands (mainly in Mauritania). In 2006-2007 he was involved in the NATO Programme Security Through Science, Collaborative Linkage Grant on: "Use of indicators for desertification in the oasian settlements" in collaboration with the universities of Errachidia (Morroco) and Blida (Algéria), and in 2005-2007 in two programmes of AUF 6313PS590 on: "Dynamique du courant éolien littoral du Maroc à la Mauritanie et aggravation de l'ensablement des infrastructures humaines par sa rencontre avec les courants continentaux: spécificité des mécanismes d'ensablement de Nouadhibou et de Nouakchott" with the Universities of Nouakchott and Errachidia; and of AUF P2-2092RR521 on: "Techniques traditionnelles de gestion et d'utilisation de l'eau en milieu soudano-sahélien camerounais, en parallèle avec les données acquises en milieu soudano-sahélien ivoirien. Etudes de cas" with the university of Abidjan (Ivory Coast) and N'agoundéré (Cameroon). His major publications include: with M. Mainguet: "The concept of global wind action system and sediment balance, keys for aeolian action monitoring". The International Conference on Desert Development in the Arab Gulf Countries, Safat, State of Kuwait, 23-26 March 1996, in: Samira Omar, A.S.; Balkema, A.A. (Eds.): *Sustainable Development in Arid Zones* (Rotterdam: Brookfield, 1998: 127-141; with M. Mainguet: "La sédentarisation en milieu sec est-elle un progrès? Observations en Mauritanie", in: *Haramata*, No. 50 (London: October 2006); with Mainguet, M.; Mahfoud, A.; Hacen, L.: "Baseline and Growth Indicators for Desertification in the Saharo - Sahelian Area of Mauritania and their Monitoring from 1953 to 1998". UNEP, Desertification Control Bulletin N° 34 (1999): 21-30; with Mainguet, M.; Lémine Ould Elhacen, Mohamed; Mahfoudh, A.: "Diagnostic par télédétection d'un changement de rythme de la dynamique éolienne: période d'amorce de la désertification en Mauritanie Saharo-Sahélienne", in: *Télédétection* 2001, 2,2, AUPELF-UREF (Paris: GB Science Publisher): 129-136.

Address: Dr. Frédéric Dumay, Université de Reims, Laboratoire GEGENA², Université de Reims Champagne-Ardenne, 51 100 Reims, France.
Email: <frederic.dumay@univ-reims.fr>.

Pál Dunay (Hungary) is faculty member, Geneva Centre for Security Policy and since the beginning of 2010 he has also been Head of the International Security Programme at the GCSP. See *biographies of editors.*

Christian Egenhofer (Germany) holds a Master's degree in Administration from the University of Konstanz as well as a Public Law degree. He is now a Senior Fellow at the *Centre for European Policy Studies (CEPS),* a Brussels-based think tank specialising in EU affairs, where he is head of the Energy, Climate and Environment Programme since 2000. He is also a Senior Research Fellow and Jean-Monnet Lecturer at the *Centre for Energy, Petroleum and Mineral Law and Policy* at the University of Dundee in Scotland/UK since 1999 and a visiting Professor at the College of Europe in Warsaw and Bruges and at LUISS University in Rome. He has a 20 years experience in consultancy both for private and public organisations including various Directorates-General of the European Commission, the European Parliament, NGOs and business organisations. He has published more than 100 articles and books on climate change and energy and is a member of several editorial boards and frequent reviewer for journals. Recent books include, amongst others *Climate Change and Trade: Taxing Carbon at the Border*; (co-author with D. Gros, 2010): *Beyond Bali: Strategic Issues of the Global Climate Change Negotiations* (editor, 2008) and *Climate and Trade Policy* (co-ed., 2007).

Address: Mr. Christian Egenhofer, Centre for European Policy Studies (CEPS), Place du Congres 1, 1000 Brussels, Belgium.
Email: <Christian.egenhofer@ceps.eu> (office).

Mohamed El Raey (Egypt), Professor of Environmental Physics, University of Alexandria, Alexandria. He obtained a Ph.D. in space physics; University of California, Berkeley (1971). Upon is return to Egypt he initiated and chaired the first department of environmental studies and he was dean of the Institute of Graduate Studies and Research, University of Alexandria (1994-2004). He is a member of the Prime Minster's National Committee on Climate Change in Egypt, chairman of the Sector Committee on Environment, Supreme Council of Egyptian Universities (2007- to date). He is environment advisor, Arab Academy of Science, Technology and Maritime Transport and is presently working to initiate the Regional Arab Center for Disaster Risk Reduction. Has received many awards including, the National State Award (1983), the Medal of Science and Arts of First Class (1985), the Price of the Arab Ministers of Environment (1999) and the University of Alexandria Appreciation Award (2006). He has published extensively on problems of remote sensing, climate change and vulnerability of the coastal zone of Egypt. Among his major publications are: (1991): "Responses to the Impacts of Greenhouse-Induced Sea-Level Rise on Egypt", in: Titus, J.G. (Ed.): *Changing Climate and the Coast,* vol. 2: *West Africa, the Americas, the Mediterranean Basin, and the Rest of Europe* (Washington, DC: UNEP & USEPA); (1994): (co-author with Dewidar, Khaled; El-Hattab, Mamdouh, 1999): "Adaptation to the sea level rise in Egypt", in: *Journal of Climate Research*, 12,2-3 (CR Special 6): 117-128; (co-author with Fouda, Yaser; Gal, P., 2000): "GIS for Environmental assessment of impacts of urban encroachment of Rosetta Region", in: *Egyptian Journal on Environmental Monitoring and Assessment*, 60,2: 217-233; (co-author with Fouda, Yaser; Nasr, Samir, 1997): "GIS Assessment of the vulnerability of the Rosetta area, Egypt to impacts of sea rise", in: *Environmental Monitoring and Assessment*, 47, 1: 59-77; (co-author with Frihy, Omran; Nasr, Samir M.; Dewidar, Khaled, 1998, 1999): "Vulnerability Assessment of Sea level Rise over Port-Said Governorate, Egypt", in: *Journal of Environmental Monitoring*, 56: 113-128; (co-author with Nasr, Samir M.; Frihy, Omran; Desouki, Sahar; Dewidar, Khalid, 1995): "Potential impacts of Accelerated sea level rise on Alexandria governorate", in: *Journal of Coastal Research* (special issue 14): 190-204; (co-author with Nasr, Samir M.; El-Hattab, Mamdouh; Frihy, Omran, 1995): "Change Detec-

tion of Rosetta Promontory over the Last Forty Years", in: *International Journal of Remote Sensing*, 16,5: 825-834; (co-author with Shardul Agrawala; Annett Moehner; Declan Conway: Maarten van Aalst; Marca Hagenstad; Joel Smith, 2004): *Development And Climate Change In Egypt: Focus on Coastal Resources and The Nile*, (Paris: OECD).

Address: Prof. Dr. Mohamed El Raey, Institute of Graduate Studies and Research, University of Alexandria; Alexandria, Egypt.
Email: <melraey@gmail.com>.
Website: <www.elraey.net>.

Walter R. Erdelen (Germany): Ph.D., Assistant Director-General for Natural Sciences, UNESCO since 2001. Within UNESCO he is responsible for the overall formulation, planning and coordination of UNESCO's strategy, programmes and plans of action in the natural sciences that include those of the *Intergovernmental Oceanographic Commission*, the *International Hydrological Programme*, the *International Geoscience Programme*, the *Man and the Biosphere Programme* and the *International Basic Sciences Programme*. This includes fostering international activities, strengthening endogenous capacities, developing major intergovernmental and inter-disciplinary cooperation programmes on environmental issues and sustainable management of natural resources, developing or improving linkages between governments, scientists, the private sector and civil society. He holds a Ph.D. in ecology and zoology from the University of Munich, and a habilitation in biogeography from the University of the Saarland. Following positions at the University of Munich, the Zoological Museum in Munich, and Saarland University, in 1995 he was appointed Professor of Ecology and Biogeography at the Institute for Animal Ecology and Tropical Biology and Director of the Ecological Field Station, University of Würzburg. In 1997 he became visiting professor at the Dept. of Biology, Institute of Technology, Bandung, Indonesia. He has consulted for national and international agencies working on land use issues, nature conservation, and in the tertiary education sector in Africa and Asia. He authored over 70 scientific papers and reviews, he currently is Director of Publication for the UNESCO newsletter, *A World of Science*, and recently led the publication of *Sixty Years of Science at UNESCO:* 1945-2005 (Paris. UNESCO).

Address: Prof. Dr Walter R. Erdelen, Natural Sciences Sector, UNESCO, 1 rue Miollis, 75732 Paris, France.
Email: <w.erdelen@unesco.org>.
Website: <http://www.unesco.org/science/>.

Louise von Falkenhayn (Australia) was an Academic Officer for the *International Human Dimensions Programme on Global Environmental Change* (IHDP) Secretariat in Bonn. She is a specialist in biomonitoring and environmental management of Australian freshwater tropical systems and obtained her Ph.D. in social science from The University of Adelaide, Australia. As an environmental change geographer and scientist her interests focus on exploring the impacts of people and climate change on ecosystems. The focus of her current work is on ecosystem services and issues of vulnerability, resilience and adaption.

Email: <louise.falkenhayn@web.de>.

Fátima Flores Palacios (Mexico) is Professor of Psychology at the Universidad Nacional Autónoma de México and teaches at the postgraduate level. Her research interests are gender issues, health related behaviour, the psychosociology of HIV/AIDS, and Social Representation Theory. Besides her university related work she is also psychotherapist. She has published numerous papers in her fields of expertise and published and co-edited several books. Her most recent co-edited books are: *Social Psychology and Gender* (New York, NY: McGraw-Hill – Mexico, D.F.: UNAM, 2001); *Paths of Social Thought* (México D. F.: Ediciones Coyoacán/UNAM, 2002), and (with Blázquez, N.; Rios, M.): *Epistemología feminista* (México D. F., CRIM/CEIICH/UNAM, in press).

Address: Prof. Dr. Fátima Flores Palacios, Facultad de Psicología, UNAM, México D.F., México.
Email: <fatimaflor@hotmail.com>.
Website: <http://pavlov.psicol.unam.mx:8080/site/Portal.htm>.

Ismail Abd El Galil Hussein (Egypt), is Head of the Agricultural Office at the Embassy of Egypt in Washington/USA, a Professor of Pomology and the former chairman of *Desert Research Center* (DRC) which was founded in 1951 to explore and utilize the natural resources in the Egyptian deserts in a sustainable manner. He obtained a Ph.D in pomology in 1985 in a collaborative reseach programme between the unversities of Cairo and Hannover. For two years he was a visting scientist on on-farm water management at the University of Arizona and the University of Texas A&M. He set up two Desert Reseach and Extension Centres in Sinai and established the Egyptian Desert Gene Bank (1996-2000) which was selected by Bioversity International as the Center of Excellence for CWANA for its efficient operational system reflecting state of the art technology in seed banking, conservation and utilization of plant genetic resources and promoting greater use of neglected plant species in the region. He established the Egyptian Observatory at DRC to build capacity, a database and information to help combat desrtification in Egypt and Africa. Since 2003 he has been the national focal point of the *United Nation Convention to Combat Desertification* (UNCCD) and he served as the chair of the *Committe of the Whole* (COW) at COP9 in Buenos Aires (2009). He was awarded the silver medal of FAO World Food Day (October 2003) and became a guardian of diversity in the Mediterranian on Biodiversity World Day (2009).
With over thirty years of experience in technical assistance for international institutions, local, and national governments in areas of farm management, dry farming, water management, agro meteorology and seed banking he significantly enhanced various agricultural activities in Egypt. He managed agricultural development projects involving stakeholders with different agendas and plans, such as the *genetic resources policy initiative* (GRPI) with six pathfinder countries (Egypt, Vietnam, Peru, Ethiopia, Nepal and Zambia) in three subregions (East, West and Central Africa). Another successful IFAD funded ptoject. coordinated by IP-

GRI, dealt with "Enhancing the Contribution of Neglected and Underutilized Species to Food Security, and to Incomes of the Rural Poor", involving farmers and NGOs from Asia, North Africa and Latin America. The *Matrouh Resources Management Project* (MRMP) funded by the Government of Egypt and the World Bank relied on a community driven approach. He also founded a station for research and extension in Toshka in Southern Egypt. He participated in many international conferences and officially represented the *Ministry of Agriculture and Land Reclamation* (MALR) in regional and international events, he chaired the African ministers of agriculture meeting of NEPAD initiative during the African Union Summit in Mozambique 2003 and in 2002 he represented Egypt at the UN secretariat of the *Convention of Biodiversity* (CBD) in Monterial with his expertise in policy implementation. He is an observer of the Interim Panel of Eminent Experts to establish the Global Crop Diversity Trust in Rome (Italy). He represents MALR in the Executive Board of the *Arab League Center for Arid Zone Studies* (ACSAD) in Syria and in the *Observatory of Sub Sahara and Sahel* (OSS) in Tunis. His communication and negotiation skills were essential for handling vital agricultural initiatives in Egypt and for securing the needed funds for their implementation.

Address: Prof. Dr. Ismail A. Hussein, Desert Research Center, Mathaf Mataria Street, Mataria, Cairo, Egypt.
Email: <ismaill@brainy1.ie-eg.com> and <ismaill.galil@gmail.com>.

Zhanyi Gao (China) is the Director of the Department of Irrigation and Drainage, China *Institute of Water Resources and Hydropower Research* (IWHR), and Director of the National Centre for Efficient Irrigation Technology Research (Beijing). He has served with IWHR since 1989 and holds a Master's Degree from the North China Water Resources and Hydropower University (1989) and a PhD from IWHR (2005). He has also served as a Senior Engineer at IWHR since 1995. From 2005 to 2008 he served as the Vice President of *International Commission on Irrigation and Drainage* (ICID). Since 2003 he has served as Director, Board of Directors, Chinese Hydraulic Engineering Society. Up to now he has been project leader for 21 national and 5 international projects. As an expert he attended several projects and review activities funded by the World Bank, the Asian Development Bank, the *Food and Agriculture Organization* (FAO). His interested research areas include research and dissemination of water-saving technology, irrigation water management and assessment, irrigation development and food security, wastewater reuse, drainage and salinity controlling, the effect of climate change on irrigated agriculture. Among his major publications are: "Integrated Wastewater Irrigation and Treatment", in: *Water Resources Journal* (December 2003); "Discussion on the Selection of Effective Water Use Techniques in Large-sized Irrigation Districts in China" (December 2005); "Development of Multi Functions of Irrigation in China", in: *Journal of Economics of Water Resources* (January 2006); "Strategy of Grain Security and Irrigation Development in China", in: *Journal of Hydraulic Engineering* (November, 2008).

Address: Dr. Zhanyi Gao, China Institute of Water Resources and Hydropower Research (IWHR), No. 20 West Chegongzhuang Rd., Beijing 100048, People's Republic of China.
Email: <gaozhy@iwhr.com>.
Website: <www.iwhr.com>.

Jorge García Gómez (Spain), Agronomic Engineer and Environmentalist, DEA on physical geography. His main research areas are erosion processes and desertification. He was a technical expert in the Desertlinks Project and coordinator of the LIFE project "Almond Pro soil" funded by the EU. He was also involved in other cooperation and research projects and is a consultant for government bodies, research centres and NGO's in Spain, Africa and Latin America. He also worked as a consultant for NGO's in Cuba and Argentina. He has co-authored articles and chapters in books with López-Bermúdez. He is partner of the consultancy firm "Eurovertice Consultores S.L" and member of environmental associations and NGOs.

Address: Mr. Jorge García Gómez, Carril de los Luíses 48, 30107 Guadalupe, Murcia, Spain.
Email: <jorge.garcia@eurovertice.eu>.

Andrés Miguel García Lorca (Spain), PhD in Geography, Professor of Regional Geographic Analysis of the University of Almeria, scientific advisor of the *Organización Iberoamericana de Cooperación Intermunicipal* (OICI) since 1989. He has directed and participated in ten research projects in Spain, the United Kingdom, Costa Rica, Argentine, Cuba and Honduras. He has also directed numerous research contracts for public and private agencies in Spain and in Latin America, he was responsible for scientific courses and seminars in most Latin American countries, and he directed 6 PhDs in geography and several end of studies projects in agricultural engineering. He has been a speaker at 20 international congresses. Since 1977 he has been publishing in scientific journals, he is an author or editor of 14 books, and of 30 chapters in several books edited in Spain and in Latin America: *Geografía e integración. Retos y alternativas para América Latina* (1999); *From traditional agriculture to technology, from emigration to inmigration* (1995); *Tendencias y transformaciones en la agricultura intensiva almeriense*(1999); *Influencia de la agroindustria en las transformaciones de los municipios rurales* (2002); *Andalucía –Norte de Africa: De la cooperación a la integración* (2003); *Anotaciones sobre los cultivos bajo plástico en China* (2005); *La agricultura litoral* (2005).*Inmigración y desarrollo regional (*2009*)*

Address: Prof. Dr. Andrés Miguel García Lorca. Universidad de Almería: Campus Universitario. E-04120. Almería. Spain.
Email: <aglorca@ual.es>.

Adeniyi Sulaiman Gbadegesin (Nigeria), is a Professor and Head of the Department of Geography, University of Ibadan, Ibadan, Nigeria. In 1991, he was the land-use consultant in SSRC/American Council of Learned Societies Joint Committee's sponsored projects on The Impact of

River Bank Erosion Control Strategies on Agriculture in Rivers State of Nigeria. He coordinated a WWF funded research project on forest resources management in southern Nigeria in 1995. He has held several international research positions including a Visiting Research Scholar of the Third World Academy of Sciences at CSINAR, Beijing, China in 1991 and a Visiting Associate Professorship of the Swedish Institute at the University of Linkoping, Sweden between 1998 and 1999. He is a member of the Management Team in charge of Environment and Development issues at the *Foundation for Urban Development and Environmental Initiatives* (FDI), Ibadan, Nigeria. Some of his recent publications include; (with Christiana N. Emuh, 2009): "Species Diversity Patterns along the Forest-Savanna Boundary in Nigeria", in: *Management of Environmental Quality*, 20,1: 2064-2072; (with Niyi Gbadegesin and Felix Olorunfemi, 2007): *Assessment of rural water supply management in selected rural areas of Oyo State, Nigeria*. ATPS Working Paper Series No. 49 (Nairobi, Kenya: ATPS Water and Environment Programme); (with Ibidun O. Adelekan, 2005): "Analysis of the Public Perception of Climate Change Issues in an Indigenous African City", in: *International Journal of Environmental Studies*, 61,1: 115–124; (with K. Owolabi, 2004): "Oil resource management and social justice in Nigeria", in: *Journal of Development Alternatives and Area Studies*, 23,1–2 (March/June): 91–123.

Address: Prof. Dr. Adeniyi Sulaiman Gbadegesin, Department of Geography, Faculty of Social Sciences, University of Ibadan, Ibadan, Nigeria.
E-mail: <adeniyig@yahoo.com> and: <as.gbadegesin@ui.edu.ng>.

Ebru Gencer (Turkey), Ph.D, Columbia University (2007). As a certified urban planner she obtained a Master of Philosophy (Urban Planning/ Architecture), a Master of Science (Urban Preservation/Urban Planning), and a Diploma in City and Regional Planning. She was a research associate at Columbia University's Academic Quality Fund Project on Risk Assessment and Mitigation to Metropolitan Areas. Her previous professional experiences include urban design/planning projects such as 'Post-war reconstruction of Mostar', 'Der Gürtel revitalization project in Vienna' and 'Squatter improvement projects' in Istanbul. In 2007, she attended the Summer Academy on Social Vulnerability organized by UNU-EHS and the MunichRe Foundation. She is the author of: *Natural Disasters, Vulnerability, and Sustainable Development: Examining the Interplay, Global Trends and Local Practices in Istanbul* (Saarbrücken: Vdm Verlag Dr. Müller, 2008). She is currently a consultant at ARC and a member of the ISOCARP Urban Planning Advisory Team for Haiti and Chile.

Address: Dr. Ebru Gencer, ARC, 12 West 23rd St, New York, NY 10010, USA.
E-mail: <eag44@columbia.edu>.

Anton Georgiev (Bulgaria) is Researcher at the *Centre for European Policy Studies* (CEPS) in Brussels since 2008. He works in the Energy and Climate Change Unit and participates in the preparation of papers and reports in the area of climate change policy. His previous career experiences include work for the General Secretariat of the Council of the European Union, where he was part of the Environment Unit, and for the Swedish Environmental Protection Agency. Anton holds a Master's degree in Ecological Economics – Studies in Sustainable Development. He recently published, as co-author with N. Fujiwara and C. Egenhofer, the CEPS Special Report: *Getting Started Now: Capacity Building for the Data System Foundations of Sectoral Approaches* prepared for the study financed by the European Commission on *Global sectoral approaches as part of the post-2012 framework* (2010). He also contributed as a collaborator to the book by D. Gros and C. Egenhofer (co-authors) with N. Fujiwara and S. Guerin (collaborators) entitled *Climate Change and Trade: Taxing Carbon at the Border* (2010). Other recent publications include the report: *Messages from Copenhagen: Assessments of the Accord and Implications for the EU* (with M. Alessi and C. Egenhofer, 2010), as well as reports focusing on the transatlantic climate change partnership and on the socio-economic impacts of climate change in Europe.

Address: Mr. Anton Georgiev, Centre for European Policy Studies (CEPS), Place du Congres 1, 1000 Brussels, Belgium.
Email: <anton.georgiev@ceps.eu> (office).

Jihed Ghannem (Tunisia), Communications Specialist at the *Sahara and Sahel Observatory* (OSS). He has a Masters degree in communications and a proven experience in development communications, particularly in the field of environmental governance and natural resources management. He has been involved in the OSS work on the Iullemeden Aquifer System (West Africa) and the North-western Sahara Aquifer System (North Africa) since 2007. Besides transboundary groundwater issues, he has performed substantial work on several themes, including climate change adaptation and development in Africa.

Address: Jihed Ghannem, Observatoire du Sahara et du Sahel (OSS), Boulevard du Leader Yasser Arafat, BP 31, 1080, Tunis, Tunisia.
Email: <jihed.ghannem@oss.org.tn>.
Website: <www.oss-online.org>.

Ernst Giese (Germany), Professor Emeritus for Economic Geography at the University of Giessen (Germany). He studied geography, mathematics, and philosophy in Münster and München. After his PhD in 1965 he wrote his (post-doctoral) habilitation thesis on the kolkhoz and sovkhoz system in Soviet Central Asia. He was assistant and associate professor at the universities of Münster, Freiburg, and Cologne. Since 1973 he has been professor for economic geography at the University of Giessen. 1998-2007 he was member of the board of directors of the Center for International Development and Environmental Research at the University of Giessen. He is also honorary professor at the Institute of Environmental and Engineering Sciences in Cold and Arid Regions of the Chinese Academy of Sciences (Lanzhou) and member of the scientific council of the Central Asian Institute of Applied Geosciences (CAIAG, Bishkek). Among his major recent publications

are: (co-edited with R. Seidelmann) *Cooperation and conflict management in Central Asia* (Frankfurt: Peter Lang, 04); (co-authored with G. Bahrenberg; J. Nipper): *Statistische Methoden in der Geographie.* Vol. 1: *Univariate und bivariate Statistik*, Vol. 2: *Multivariate Statistik*. 4th edition, Stuttgart: Teubner, 42003); (co-authored with A. Bohnet; G. Zeng): *Die Autonome Region Xinjiang (VR China). Eine ordnungspolitische und regionalökonomische Studie*. 2 vols (Münster: Lit, 1998, 1999); (co-authored with G. Bahro; D. Betke) *Umweltzerstörungen in Trockengebieten Zentralasiens (West- und Ost-Turkestan). Ursachen, Auswirkungen, Maßnahmen* (Stuttgart: Franz Steiner, 1998).

Address: Prof. Dr. Ernst Giese, Institut für Geographie, Bereich Wirtschaftsgeographie, Senckenbergstraße 1, 35390 Giessen, Germany.
Email: <Ernst.Giese@geogr.uni-giessen.de>.

Yannick Glemarec (France), Executive Coordinator at UNDP's Global Environment Facility. In this capacity, he is primarily responsible for the implementation oversight of a $6 billion portfolio ($2 billion in grants and $4 billion in co-financing) comprising over 2,000 projects and activities in 140 countries. He supervises UNDP-GEF staff both at HQ and at six UNDP-GEF regional coordination units in Beirut, Bratislava, Dakar, Bangkok, Panama City and Pretoria. He joined UNDP in 1989 and successively served as a country manager in Vietnam for five years, in China for five years and in Bangladesh for two years prior to joining UNDP-GEF in New York in January 2003. He holds a PhD from the University of Paris in Environment Sciences, and two Master Degrees in Hydrology (DEA) from the French National School for Water and Forestry (ENGREF-France) and in Business Administration (Durham-UK). He has authored and co-authored several publications in the fields of environment management, disaster risk management and low carbon/climate resilient development. Among his major publications: (co-author with others, 2009: *Charting a New Low Carbon Route to Development: A Primer on Integrated Climate Change Planning for Regional Government* (New York: UNDP).

Address: Dr. Yannick Glemarec, Executive Coordinator at UNDP's Global Environment Facility, 304 East 45th Street, New York, NY 10017, U.S.A.
Email: <yannick.glemarec@undp.org >.

Francisco J. Gomariz-Castillo (Spain), Research Associate at the *Institute of Water and Environment* (INUAMA) at the University of Murcia working on projects related to GIS, spatial modelling, hydrology, water resources management, natural hazards and remote sensing. From 1997 to 2001 he studied geography at the University of Murcia. Until 2003 he worked as a research associate at INUAMA at the University of Murcia on risk and flood risk analysis. From 2003 to 2005 he was a technical assistant of the *General Directorate of Natural Environment* (CCAA of Murcia) working on planning on protected areas and applying geo-informatics to natural resources. From 2005 to 2009 he worked for the public company TRAGSATEC as head of operations and projects on the implementation of *Geographical Information Systems* (GIS) in the Coastal Directorate of the Ministry of Environment and as a consultant for a project on environmental restoration and water-forest restoration and planning. He participated in numerous publications, conferences, committees on spatial modelling, hydrology, water resources management, natural management resources and on the development of GIS

Address: Mr. Francisco J. Gomariz-Castillo, Instituto Universitario del Agua y del Medio Ambiente, Universidad de Murcia, Campus de Espinardo, 30100 Espinardo, Murcia, Spain.
Email: <fjgomariz@um.es>.

Jakob Granit (Sweden), Project Director at the *Stockholm International Water Institute* (SIWI) for advisory services and applied policy development in the area of water, energy, and the environment. He worked for the World Bank as a Senior Water Resources Management Specialist including as a Cluster Team Leader for the multi-sector Nile team providing advisory services and institutional building advice to clients in East, Central and Southern Africa in the area of multi-purpose water resources development for economic growth. Prior he was managing a transboundary water resources support programme for the *Swedish International Development Cooperation* (Sida) in Southern Africa. He gained much experience in complex development processes and management of multinational project teams through his work at the World Bank and Sida. He worked on the identification, project design, preparation, financing and implementation of projects including analytical work and strategic planning coupled with major fundraising activities and the fiduciary oversight and responsibility for significant credits and grants. Among his major publication are: "Identifying Business Models for Transboundary River Basin Organisations", in: *Water without Borders: From Rhetoric to Practice in Transboundary Water Management* (Eds: Earle/Jägerskog/Öjendal, Earthscan 2010, in press); (coed. with Löfgren): *Water and Energy Linkages in the Middle East – Regional Collaboration Opportunities*. SIWI Paper 16 (Stockholm, SIWI, 2010); (co-author with Bullock/Gooijer/Lindström/Löfgren/Pettigrew): *Regional Water Intelligence Report Central Asia*. SIWI Paper No 15. (SIWI/WGF/UNDP, Stockholm, 2010); (coauthor with Phillips/Allan/Claassen/Jägerskog/Kistin/Patrick/Turton): *The TWO Analysis: Introducing a Methodology for the Transboundary Waters Opportunity Analysis*. Report Nr. 23. (Stockholm, SIWI, 2008); (coauthor with Jägerskog/Risberg/Yu): *Transboundary water management as a Regional Public Good: Financing Development – an example from the Nile Basin* (Stockholm: SIWI, 2006); *World Bank Country Water Assistance Strategies for Kenya and Tanzania* (Washington, D.C.: World Bank, 2004, 2006).

Address: Mr. Jakob Granit, Drottningatan 33, 111 51 Stockholm, Sweden.
Email: <Jakob.granit@siwi.org>.
Website: <www.siwi.org>.

John Grin (Netherlands) is Professor at the Department of Political Science of the University of Amsterdam and was scientific director of the *Amsterdam School for Social Science Research* (ASSR). See: *Biographies of editors.*

Debarati Guha-Sapir (India/Belgium) is Director of the WHO collaborating *Centre for Research on the Epidemiology of Disasters* (CRED) and Professor at the University of Louvain, Research Institute Health and Society, Brussels. She holds an Adjunct Professor-ship at Tulane University Medical Centre (New Orleans) for Health and Humanitarian Aid. Trained at Calcutta University, Johns Hopkins University and University of Louvain she holds a PhD in epidemiology. Since 1984, she has been involved in field research and training in emergency and humanitarian aid issues, working closely with WHO, *United Nations High Commissioner for Refugees* (UNHCR), *United Nations Development Programme* (UNDP) and the *European Commission* (EC) in various regions of the world. She is particularly interested in health systems research, epidemiology in unstable situations and international policy related to relief and post conflict transition. She has written widely on the epidemiology of disasters and conflicts in journals such as The Lancet, Tropical Medicine and International Health, Epidemiologic Reviews. Most recently, she received the Peter Safar Award at the 16th World Congress on Disaster and Emergency Medicine, Victoria, Canada. Among her major publications are: "Cyclone Nargis in Myanmar: Lessons for public health preparedness for cyclones", in: *American Journal of Disaster Medicine*, 4,5 (2009); "Health impact of the 2004 Andaman Nicobar earthquake and tsunami in Indonesia", in: *Prehospital and Disaster Medicine*, 24,6 (2009) and *Thirty years of natural disasters* 1974-2003*: the numbers* (Presses Universitaires de Louvain: Louvain-La-Neuve, 2004).

Address: Prof. Dr. Debarati Guha-Sapir, Centre for Research on the Epidemiology of Disasters (CRED), Department of Public Health, Université Catholique de Louvain, 30.94 Clos Chapelle-aux-Champs, 1200 Brussels, Belgium.
Email: <CRED@esp.ucl.ac.be>.
Website: <www.cred.be>.

Marwan Haddad (Palestine), Ph.D, is a Professor of Environmental Engineering and director, Water and Environmental Studies Institute, An-Najah National University, Nablus, Palestine. He was born in Nablus, Palestine and holds a diploma of Engineering in Structural Civil Engineering from the University of Kiril and Methody, Architectural and Civil Engineering Faculty, Skopje, Macedonia (1976), an MSc. in Sanitary Engineering from Syracuse University, NY, USA (1983), and a PhD in Environmental Civil Engineering also from Syracuse University, NY, USA (1986). He worked over four years for the Housing Corporation of Jordan (1976–1980), moved to the US for his graduate studies (1981–1986), and then joined the Faculty of Engineering at An-Najah National University in Nablus in 1986 as an assistant professor. He obtained his promotion to associate then to full professor in Environmental Engineering in 1994 and 2000, respectively. His main research area is in water quality and resource management. He has published over 130 papers in his field, and edited over ten international conference proceedings and refereed books. He was a consultant for local and international firms and NGOs. For his work he received several awards and honors. He served as head of the Civil Engineering Department at An-Najah National University (1986–1992), coordinator of the Palestinian Water Committee associated with the Peace negotiation with Israel (1991–1995), director of the Water and Environmental Studies Centre (1994–1996), dean of the College of Engineering (1996–1998), and director of the Water and Environmental Studies Institute (2008-present).

Address: Marwan Haddad, Professor and Director, Water and Environmental Studies Institute (WESI), An-Najah National University, P.O. Box 7,707, Nablus, Palestine.
Email: <haddadm@email.com>, and <haddadm@najah. edu>.
Website: <www.najah.edu>.

Clair Hanson (United Kingdom), Ph.D., is a Senior Research Associate at the University of East Anglia, UK. She was previously involved in the production of the Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report for Working Group II (Impacts, Adaptation and Vulnerability), as Deputy Head (Science) of the IPCC Technical Support Unit while based at the UK Met Office. Her research interests include climate change impacts with particular focus on extreme events in Europe, and rainfall and runoff variability in Africa and Asia.

Address: Dr. Clair Hanson, Overseas Development Group, University of East Anglia, Norwich NR4 7TJ, UK.
Email: <c.e.hanson@hotmail.co.uk>.

Kanupriya Harish (India) is the Project Director of the *Jal Bhagirathi Foundation* (JBF) and is heading the professional resource base of the JBF. She obtained a MPhil from Jawaharlal Nehru University in Delhi, and has been working in the JBF since 2004 focussing on the revival of traditional water management systems through community institutions. She has worked on mainstreaming gender in water management among very feudal and caste ridden communities. As head of the project team she is managing the implementation of a multi-pronged community based water management programme being implemented in three districts of Western Rajasthan, India. She is involved in advocacy campaigns for ensuring pro poor concerns are integrated in water resource management. She has a keen interest in the empowerment of marginalized communities especially women and has initiated many programmes for mainstreaming them in the development process.

Address: Ms. Kanupriya Harish, Jal Bhagirathi Foundation, Near Kayalana Lake, Bijolai, Jodhpur, Rajasthan, India.
Email: <jal@jalbhagirathi.org>.
Website: <www.jalbhagirathi.org>.

Vilho Harle (Finland): Dr. Soc.Sci. (IR), Professor of International Politics at the Department of Political Science of the University of Tampere, Finland. Formerly professor of Political Science at the University of Tampere, and of IR at the University of Lapland, and the University of Helsinki. His research has covered various topics in peace research,

international theory, identity politics, and political geography. His current research focuses on critical theory, multidisciplinarity in IR, and the English School of IR and its application to the study of traditions and practice of Finnish foreign and security politics. He is the author of several publications including: *Ideas of Social Order in the Ancient World* (Greenwood Press 1998), *The Enemy with a Thousand Faces* (Praeger 2000), and "Critical Geopolitics of Northern Europe", *Geopolitics* 8,1, 2003 (Special Issue edited in cooperation with Pami Aalto and Simon Dalby).

Address: Prof. Dr. Vilho Harle, Department of Political Science, University of Tampere, FIN-33014 University of Tampere, Finland.
Email: <vilho.harle@uta.fi>

Paul G. Harris (Hong Kong) is Chair Professor of Environmental Studies in the Department of Science and Environmental Studies at the Hong Kong Institute of Education. From 2000 to 2009 he taught at Lingnan University, Hong Kong, where he was Professor of International and Environmental Studies, Director of the Centre for Asian Pacific Studies, Director of the Environmental Studies Programme, and Director of the Project on Environmental Change and Foreign Policy. During the 1990s he was a faculty member at universities in Britain and the United States. His research on global environmental politics, foreign policy and international ethics has been published widely in academic journals. His books include *Climate Change and American Foreign Policy* (New York: St. Martin's Press/London: Palgrave Macmillan, 2000); *International Equity and Global Environmental Politics* (Aldershot: Ashgate, 2001); *The Environment, International Relations, and U.S. Foreign Policy* (Washington: Georgetown University Press, 2001), *International Environmental Cooperation* (Boulder: University Press of Colorado, 2002); *Global Warming and East Asia* (London: Routledge, 2003); *Confronting Environmental Change in East and Southeast Asia* (Tokyo: United Nations University Press/London: Earthscan, 2005), *Europe and Global Climate Change* (Cheltenham: Edward Elgar, 2007); *The Global Politics of AIDS*, co-edited with Patricia D. Siplon (London: Lynne Rienner, 2007); *Environmental Change and Foreign Policy* (London Routledge, 2009), *Climate Change and Foreign Policy* (London: Routledge, 2009), and *World Ethics and Climate Change* (Edinburgh: Edinburgh University Press, 2010).

Address: Prof. Paul G. Harris, Department of Science and Environmental Studies, Hong Kong Institute of Education, Tai Po, New Territories, Hong Kong.
Email: <pharris@IEd.edu.hk>.

Bassam Ossama Hayek (Jordan), Assistant Professor at *Princess Sumaya University for Technology* (PSUT), Director of the Eco-tech Park, *Royal Scientific Society* (RSS) and an independent consultant for environment & sustainability. He has Ph.D. in chemical engineer, University of Swansea (UK) in 1994. He started his career in 1994 as a researcher in the environment field at the RSS and served as the director of the Environment Research Centre of RSS (2000–2009). He has experience in the treatment of domestic and industrial wastewater; environmental assessment; hazardous waste management and control. He has executed and supervised research projects and studies on the treatment of wastewater, industrial audits (pollution prevention and waste minimization and cleaner production), environmental assessment, and hazardous materials management. He participated as a member in national committees, contributed in establishing the Master Program in Environmental Technology and Management at Princess Sumaya University, the Cleaner Production Unit and the Biosafety Unit at RSS, and most recently initiated the Eco-tech Park project to assist Jordanian enterprises and communities in adopting clean technologies and sound environmental practices in addition to working independently on water and environment governance. He has written and supervised or co-authored 22 publications of scientific papers and technical reports, including: *Environment Sector in Jordan; Key Issues for Environmental Risk Assessment,* International Risk Management Meeting, Italy 2001; *Environmental and Economic Improvement through Implementation of Cleaner Production in Hospitality Sector in Jordan: Case Studies in Four Hotels* (2008), *Participative Irrigation Water Management in the Jordan Valley* (2010). He supervised the following studies: *Environmental Impact Assessment for Gas Transmission Project* (2004); *Environmental Impact Assessment for Kemira Arab Potash Co.* (2000); *Water Pollution Crises Management; A Case Study on Cryptosporidium Outbreak in Munshiyat Bani Hassan - Jordan*, report submitted to the Ministry of Health, Jordan (November 2007) and drafted bylaws related to irrigation water management (2010).

Address: Prof. Dr. Bassam Hayek, Director, Eco-tech Park, Royal Scientific Society, P.O. Box 1438, Al Jubeiha 11941, Amman, Jordan.
Email: <bhayek@rss.gov.jo> and <BOHayek@yahoo.co.uk>.
Website: <www.rss.gov.jo>.

Thomas Heberer is Chair Professor of East Asian Politics at the Institute of Political Science and the Institute of East Asian Studies at the University Duisburg-Essen in Germany. His research focuses on political, social and institutional change, nationalities policies, environmental policies and corruption in China. He has worked as a translator and reader with the Foreign Language Press in China from 1977-81. Since 1981 he is on a yearly basis conducting field research in China for 2-3 months. He is a member of the Advisory Board of the Europe-China Academic Network of the European Commission. Among his recent book publications are: Rural China Economic and Social Change in the Late Twentieth Century, Armonk/London (Sharpe) 2006; (with C. Derichs, ed.), The Power of Ideas - Intellectual Input and Political Change in East and Southeast Asia, Copenhagen (NIAS Press) 2006; Thomas Heberer/Anja D. Senz, China's Significance in International Politics. Domestic and external developments and action potentials. German Development Institute, Bonn 2007; Doing Business in Rural China: Liangshan's New Ethnic Entrepreneurs, Seattle/London (University of Washington Press) 2007; (with G. Schubert), Politcal participation and regime legitimacy in the PR of China, vol. 1: the urban space, Wiesbaden (Verlag Sozialwissenschaften) 2008 and vol. 2: the rural space (both

in German), Wiesbaden 2009; (with G. Schubert), Cong qunzhong dao gongmin. Zhongguo de zhengzhi canyu (From Masses to Citizens. Political participation in China, Beijing (Bianyi chubanshe) 2009.

Address: Prof. Dr. Thomas Heberer, Institute for East Asian Studies, University Duisburg-Essen, 47048 Duisburg/Confucius Institute Metropolis Ruhr, 47057 Duisburg.
E-mail: <thomas.heberer@uni-due.de>.
Website: <http://www.uni-due.de/oapol/>.

Ann Henderson-Sellers (Australia), DSc. (University of Leicester, UK), Professor of environmental science, Environment & Geography Department, Macquarie University and ARC Professorial Research Fellow in the Climate Risk Concentration of Research. Until 2007, the Director of the United Nations' *World Climate Research Programme* (WCRP), Ann has championed the scientific need for action to mitigate and adapt to climate change for over 35 years. She has been an Earth Systems scientist spearheading the description and prediction of the influence of land-cover and land-use change on climate and human systems. She obtained a BSc in mathematics at Bristol in 1973, PhD in 1976 in collaboration with the U.K. Meteorological Office and a D.Sc. in climate science in 1999. She is an elected Fellow of Australia's Academy of Technological Sciences and Engineering and was awarded the Centenary Medal of Australia for Service to Australian Society in Meteorology in 2003. She is an ISI 'most highly cited' author of over 500 publications, including 14 books and an elected Fellow of America's Geophysical Union and the American Meteorological Society. She has served as a Council member of the *International Council of Science's International Geosphere-Biosphere Programme* (IGBP) and was involved as an author in all assessments of the *Intergovernmental Panel on Climate Change* (IPCC) that was rewarded the Nobel Peace price in 2007, including as a Convening Lead Author for the Second Assessment. She served on Australia's Science and Technology Council, chaired the Australian National Committee for Climate and Atmospheric Sciences and was the President of International Association of Meteorology and Atmospheric Sciences' International Commission for Climate from 1991-1995. Prior she was the Founding Director of the Climatic Impacts Centre at Macquarie University, headed the Australian Nuclear Science and Technology Organizsation's Institute for Nuclear Geophysiology and was the Deputy Vice Chancellor at the *Royal Melbourne Institute of Technology* (RMIT) University. Among her major publications are: (co-author with V. Gornitz, 1984): "Possible climatic impacts of land cover transformations, with particular emphasis on tropical deforestation", in: *Climatic Change*, 6: 231-258; (co-author with R.E. Dickinson, 1988): "Modelling tropical deforestation: a study of GCM land-surface parameterizations", in: *Quart. J. Roy. Meteor. Soc.,* 114,B: 439-462; (co-author with A.J., Pitman and Z-L. Yang, 1990): "Sensitivity of regional climates to localized precipitation in global models", in: *Nature,* 346: 734-737; (co-author with P.J. Sellers, R.E. Dickinson, D.A. Randall, A.K. Betts, F.G. Hall, J.A. Berry, G.J. Collatz, A.S. Denning, H.A. Mooney, C.A. Nobre, N. Sato and C.B. Field, 1997): "Modeling the exchanges of energy, water, and carbon between continents and the atmosphere", *Science,* 275: 502-509; (co-author with S.J. Doherty and S. Bojinski, et al., 2009) "Lessons learned from IPCC AR4: Scientific developments needed to understand, predict and respond to climate change", in: *Bulletin of American Meteorological Society*, 90, 4;497-513; at: <http://journals.ametsoc.org/doi/abs/10.1175/2008BAMS2643.1pdf>.

Address: Prof. Dr A. Henderson-Sellers Macquarie University, Department of Environment and Geography, Sydney, NSW 2109, Australia.

Yasuaki Hijioka (Japan), is a Senior Researcher of the National Institute of Environmental Studies in Japan. He received his Doctor of Engineering from the University of Tokyo, Japan in 2001. His research topics cover modelling analysis for environmental issues related to climate change impacts, and he is involved in the development of the *Asian-Pacific Integrated Model* (AIM) to estimate climate change impacts and to assess policy options for stabilizing global climate.

Address: Dr. Yasuaki Hijioka, Social and Environmental Systems Division, National Institute for Environmental Studies, 16-2 Onogawa, Tsukuba, Ibaraki, 305-8506, Japan.
Email: <hijioka@nies.go.jp>.

HRH Prince El Hassan bin Talal (The Hashemite Kingdom of Jordan) is a pluralist who believes in societies in which all peoples can live, work and function in freedom and with dignity. See *Biographies of authors of forewords and preface essays.*

Yaqiong Hu (China) is the Senior Engineer of the Department of Irrigation and Drainage, China *Institute of Water Resources and Hydropower Research* (IWHR) and National Centre for Efficient Irrigation Technology Research (Beijing). She has served with IWHR since 1998 and holds a Master's Degree from McGill University, Canada. She has been a member of the *International Commission on Irrigation and Drainage* (ICID) since 2005 and a member of *Chinese National Committee on Irrigation and Drainage* (CNCID) since 2003. Up to now she has undertaken 10 national and 3 international projects. Her research areas include: irrigation, water and soil management, agricultural water environment protection, effect of climate change on irrigated agriculture, drainage and salinity controlling. Among her major publications are: "Study on the environmental problems and its countermeasures in large irrigation district in China", in: *Water Saving and Irrigation* (March 2003); "Countermeasures and suggestions to speed up the construction of agricultural water saving support system", in: *China Water Resources* (March 2002); "Study on policies of water price in pumping irrigation district", in: *Water Saving and Irrigation* (March 2002); *Technical code for water supply engineering of town and village* (Beijing: China Water Power Press, February 2005); "Systems approach to achieve real water savings in Australia and China", in: *Proceedings of the 19th ICID Congress* (Septem-

ber 2005); "The Effects of Oxidation-Reduction Potential on the Solubility of Phosphorus in Agricultural Water Management Systems" (Master thesis, McGill University, June 2008).

Address: Ms. Yaqiong Hu, China Institute of Water Resources and Hydropower Research (IWHR), No. 20 West Chegongzhuang Rd., Beijing 100048, People's Republic of China.
Email: <huyq@iwhr.com>.
Website: <www.iwhr.com>.

Veronika Huber (Germany) has worked at the Potsdam Institute for Climate Impact Research (PIK) as a Scientific Assistant to the Director since 2008. See *biographies of authors of forewords and preface essays.*

Elisabeth Huber-Sannwald (Austria, Mexico), PhD in Range Ecology from the Utah State University (1996). She received a Master's degree in Biology/Botany from the University of Innsbruck (1990). She was Scientific Officer on *Global Change and Ecological Complexity of the Global Change and Terrestrial Ecosystems* (GCTE), Core Project of the *International Geosphere-Biosphere Program* (IGBP) at the Instituto de Ecología de la Universidad de Buenos Aires, Buenos Aires, Argentina (1997). She was Assistant Professor at the Grassland Science Department, Technische Universität München, Weihenstephan, Germany (1998-2001). She examined management effects on plant nitrogen and carbon allocation patterns and AM fungi distribution in different species-poor and species-rich grassland ecosystems. Currently she is involved in these research activities:1) Ecosystem responses and feedback mechanisms to variable abiotic and biotic environments at different spatial and temporal scales in the semi-arid and arid region of Northern Mexico considering interactive effects of land use change; 2) Integrated assessment of biophysical and socio-economic factors and drivers that cause desertificacion and land degradation in socio-ecological systems in arid and subtropical regions of the Americas applying the Dryland Development Paradigm to ARIDnet case studies; 3) Coordination of the Mexican Grassland Network for Investigation and Leadership in Sustainable Management, *Grupo Regional en Agostaderos Mexicanos para su Investigacion y el Liderazgo de su Uso Sustentable* (GRACILIS) and of the cross-cutting theme biogeochemical cycles and climate change as part of the Network Mex LTER.

Address: Dr. Elisabeth Huber-Sannwald, Division Ciencias Ambientales (IPICYT), Camino de la Presa de San Jose # 2055, Lomas 4ta seccion, San Luis Potosi, SLP CP 78216, Mexico.
Email: <ehs@ipicyt.edu.mx> and <ehs@titan.ipicyt.edu.mx>.

Arie S. Issar (Israel), Professor Emeritus at the J. Blaustein Institutes for Desert Research, and the Geological Department of Ben Gurion University of the Negev. He founded and headed the Water Resources Center of the Institute for Desert Research since 1975 until his retirement in 1998. He received his Ph. D. at the Hebrew University of Jerusalem in 1961. From 1980-1998 he was the holder of the Alain Poher Chair in Hydrogeology of Arid Zones. He received the following prizes: Ernest D. Bergmann Prize for Special Scientific Contributions to the Development of the Negev Desert (1985); Prize of the President of the International Association of Hydrogeologists for Outstanding International Contributions toward the Advancement of Hydrogeology (2003); Honorary Member of the Israeli Association for Water Resources (2005). His current research focuses on the impact of climate change on the hydrological cycle and socio-economic systems; and developing the conceptual model of Progressive Development in order to mitigate the negative impact of global change on the water resources of the Middle East and other arid and semi arid regions. This model recommends long term policies of development of the marginal water resources as well as the exploitation of the fossil aquifers of these regions. He has published about hundred papers and co-edited five books and wrote six books in the fields of geology and hydrogeology. On the impact of climate changes on the hydrological cycle and on the environment he published these books: *Water Shall flow from the Rock. Hydrogeology and Climate in the Lands of the Bible* (Heidelberg – New York: Springer-Verlag, 1990); *Climate Changes during the Holocene and their Impact on Hydrological Systems* (Cambridge: Cambridge University Press, 2003); (Co-ed. with Angelakis, Andreas N.): *Diachronic Climatic Impacts on Water Resources (with Emphasis on the Mediterranean Region* (NATO ASI Series. Springer-Verlag, 1996); (Co-ed. with Brown, Neville): *Water, Environment and Society in Times of Climate Change* (Dordrecht, The Netherlands, Kluwer Academic Publishers, 1998); (Coauthor with Zohar, Mattanyah): *Climate Change – Environment and Civilization in the Middle East* (Berlin – Heidelberg – New York : Springer 2004, 2007); (Ed.): *Progressive Development. To Mitigate the Negative Impact of Global Warming on the Semi-arid Regions* (Berlin – Heidelberg – New York: Springer, 2010).

Jochen Jesinghaus (Germany) is an Economist and Engineer, since 1992 he has been an official of the European Commission, with extensive work experience in sustainable development, globalization and political sciences. With Ernst Ulrich von Weizsäcker, he wrote *Ecological Tax Reform* (1992). He has been a member of numerous Commission working groups, e.g. *Interservice Working Group* (IWG) on Green National Accounting and Environmental Indicators and IWG on economic instruments for the preparation of the 1993 Delors *White Paper on Growth, Competitiveness & Employment*, of several Eurostat Working Groups, OECD SOE group, of the United Nations experts group on SD indicators and on the Framework for the Development of Environment Statistics, the World Economic Forum ESI Peer Review Group, IISD Consultative Group on Sustainable Development Indices, Bellagio group on SD indicators. Member of the Italian delegation to the World Social Forum, Porto Alegre 2002, World Summit on Sustainable Development (Johannesburg 2002), and European Social Forum (Florence 2002). From March 2003 to November 2005 working in the European Commission's General Directorate for Development (Unit for Relations with the UN system, Member States and other OECD donors), responsible, inter alia, for the follow-up of the WSSD. Since December 2005 working in DG JRC on complex indicator systems, inter alia on the 'Millennium Development Goals Dashboard of Sustainability' and on the 'Measuring the Progress of Societies' initiave led by the OECD World Forum on Statistics, Knowledge and Policy, and the European Commission's Beyond GDP initiative.

Address: Jochen Jesinghaus, European Commission, DG JRC G-9 TP 36/170, Via Enrico Fermi, 1, I-21020 Ispra (VA), Italy.
Email: <jochen.jesinghaus@jrc.ec.europa.eu>.

Richard Jones (UK) is Manager of Regional Cclimate Predictions at the Met Office Hadley Centre where he has worked since 1990. Prior to this he worked in the Mathematics Department at Oxford University having obtained his PhD in Numerical Analysis from Imperial College in 1987. His main responsibilities are to provide state of the art regional climate modelling systems and to provide and analyse regional climate change scenarios and advice on these as required under contracts for various UK government departments and international bodies. He developed regional climate modelling in the Hadley Centre, overseeing many major firsts in the field worldwide - development of a consistent GCM/RCM modelling system; domain-size experiments; climate timescale experiments driven by numerical weather prediction analyses; multi-decade regional climate change experiments; development of GCMs to provide high quality boundary conditions for RCMs; ensemble regional climate change experiments. He is a lead or major contributing author to many fundamental publications in regional climate modelling including being a lead author of the IPCC's Assessment Reports (2001, 2007). He led the development of the regional climate modelling system PRECIS, has worked with many European institutes and is currently working with institutes across all continents in the fields of climate prediction and climate scenario development. Among his major publications are: (with Jones, R. G.; Hassell, D.C.; Hudson, D.; Wilson, S.S.; Jenkins, G.J.; Mitchell, J.F.B, 2004: *Workbook on generating high resolution climate change scenarios using PRECIS* (Exeter, UK: Met Office Hadley Centre – New York: UNDP); (with Christensen, J.H.; Hewitson, B.; Busuioc, A.; Chen, A.; Gao, X.; Held, I.; Jones, R.; Kolli, R.K.; Kwon, W.-T.; Laprise, R.; Magaña Rueda, V.; Mearns, L.; Menéndez, C.G.; Räisänen, J.; Rinke, A.; Sarr, A.; Whetton, P., 2007: "Regional Climate Projections", in: IPCC (Ed.): *Climate Change 2007: The Physical Science Basis*. Contribution of Working Group I (Cambridge; Cambridge University Press).

Address: Dr. Richard Jones, Met Office Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.
Email: <Richard.jones@metoffice.gov.uk>.
Website: <http://www.metoffice.gov.uk>.

Lahcen Kabiri (Morocco), Professor of Geology at the Faculty of Sciences and Technology, Errachidia (FSTE), Moulay Ismaïl University (UMI) Meknes, Morocco; in charge of the Laboratory of Surface Formations (LFS)/Climate, Water, Environment and Heritage Sciences [SCEEP]. He was the Moroccan coordinator of a NATO Linkage project on*: Use of Indicators for Desertification in the Oasis Settlements*, in collaboration with Reims University (France) and Blida University (Algeria). L. Kabiri was responsible for the Thématique d'Appui à la Recherche Scientifique PROTARS (P2T3/13, FSTE_UMI, Maroc) 1999–2004 on the climate changes impacts on: *écosystèmes de la région de Tafilalt et environs depuis environs* 140 000 *ans BP*. In 2003 he benefitted of the UNESCO prize of the MAB project: *Impact*

des changements climatiques et anthropiques sur les ressources en Eau dans l'Oasis de Ferkla (Tinjdad, Errachidia, Morocco). Among his main publications are: Kabiri, L. et al.: 2003: "Etude préliminaire de la dynamique des dunes continentales dans le Sud Est marocain", in: *Sécheresse,* 14,3 (Sseptember): 149–156; Boudat; Kabiri, L., 2002: "Désertification et Crise de quelques Oasis dans les bassins versants de Ziz et Ghèris (Errachidia, Maroc)", in: *Revue de Géographie du Maroc,* (RGM), 20,1–2 (Nouvelle série): 97106; Kabiri, L., 2004: *Contribution au développent durable des Oasis du sud marocain: cas de l'oasis de Ferkla (Tinjdad, Goulmima, Errachidia, Maroc).* Minbar Al Jamiaa No. 6 (Meknès: Université Moulay Ismaïl (UMI)): 323–332; Bouhlassa, S. ; Alechcheikh, Ch.; Kabiri, L., 2007: "Origine de la minéralisation et de la détérioration de la qualité de la nappe quaternaire du sous- bassin versant de Rheris (Errachidia, Maroc)", in: *Revue Sécheresse*, 19,1 (March 2008): 67–75; Buhl, D.; Immenhauser, A.; Smeulders, G.; Kabiri, L.; Richter, D., 2007: *Times series d Mg analysis in speleothem calcite: Kinetic verus equilibrium fractionation, comparison with other proxies and implications for palaeoclimate reserarch*, in: *Chemical Geology, isotope geoscience*, 244: 715–729.

Address: Prof. Dr. Lahcen Kabiri, Université Moulay Ismail, Faculté des Sciences et Techniques d'Errachidia, Laboratoire de Science du Climat, de l'Eau, de l'Environnement et du Patrimoine [SCEEP], BP 509, Boutalamine, 52 000 Errachidia, Maroc.
Email: <kabiri_lahcen@yahoo.fr> and <kabirou@hotmail.com>.

Patricia Kameri-Mbote (Kenya), is Professor of Law, University of Nairobi. See *biographies of editors.*

Yasuko Kameyama (Japan) has been working for the *National Institute for Environmental Studies* (NIES) since 1992. Her academic background is international relations, and her studies have been mainly on international negotiations on climate change. She has participated in most international negotiations related to *UN Framework Convention on Climate Change* (UNFCCC) since the first *Conference of the Parties* (COP1) to the UNFCCC in 1995 as a member of Japanese delegation. In 1999–2000, she stayed at the Department of Government and Politics, University of Maryland, U.S., as a visiting researcher. She obtained her doctoral degree at Tokyo Institute of Technology in 1997. She has many publications on international negotiations, international institutions, and on the national decision making process related to climate change. One of her latest articles on climate change negotiation is: "Process Matters: Building a Future Climate Regime with Multi-Processes", in: *Climate Policy*, 7,5 (2007): 429–443. She has recently co-edited a book with A. P. Sari, M. H. Soejachmoen and N. Kanie (2008): *Climate Change in Asia: Perspectives on the Future Climate Regime* (Tokyo: UNU Press).

Address: Dr. Yasuko Kameyama, Senior Researcher, National Institute for Environmental Studies, 16-2 Onogawa, Tsukuba, 305-8506, Japan.
Email: <ykame@nies.go.jp>.
Website: <http://www.nies.go.jp/index.html>.

Narichika Kanie (Japan) is Associate Professor at the Graduate School of Decision Science and Technology, Tokyo Institute of Technology, Japan, and Visiting Associate Professor of the United Nations University Institute of Advanced Studies. Among others he serves as a scientific steering committee member of the Earth Systems Governance Programme of IHDP, and is editorial board member of the journal *Global Environmental Governance*. Currently he is a bureau member of *Working Party on Global and Structural Policies* (WPGSP) at OECD. From August 2009 to July 2010 he is a Marie Curie Incoming International Fellow of the European Commission and based in SciencesPo. and IDDRI, Paris, France. His recent publications include "Post-2012 Institutional Architecture to Address Climate Change: A Proposal for Effective Governance. Global Warming and Climate Change", in: Grover, V.I. (Ed.): *Global Warming and Climate Change: Ten Years After Kyoto and Still Counting,* Vol. 2. (city, NH: Science Publishers, 2008): 1065–1077; "The long-team challenge of climate change – Possible allocations for Japan and Asian countries in 2050", in: (Co-ed. with Yasuko Kameyama, Agus P. Sari, Moekti H. Soejachmoen): *Climate Change in Asia* (Tokyo: United Nations University Press, 2008): 31–48. He received his Ph.D. in Media and Governance from the Keio University.

Address: Prof. Dr. Norichika KANIE, Department of Value and Decision Science, Graduate School of Decision Science and Technology, Tokyo Institute of Technology, 2-12-1-W9-43 Ookayama, Meguro-ku, Tokyo 152-8552, Japan.
Email: <kanie@valdes.titech.ac.jp>.
Website: <http://www.valdes.titech.ac.jp/~kanie>.

Nanda Kishor, MS (India) is a Project Consultant in the Centre for Energy, Environment, Urban Governance & Infrastructure Development in the *Administrative Staff College of India* (ASCI), Hyderabad. He is presently working on state sanitation strategies and city sanitation plans all over India under the most appreciated *Jawaharlal Nehru National Urban Renewal Mission* (*JNNURM*) of Ministry of Urban Development, Government of India. Prior to this, he was a faculty at Regional Centre for Urban and Environmental Studies, Osmania University, Hyderabad, India, heading the Urban Poverty Alleviation Cell at the centre. He obtained his Ph. D from the University of Hyderabad, India. He obtained his Ph. D from University of Hyderabad, India. He has been working on Poverty, displacement, forced migration, Sustainable Development, gender and vulnerability. He is a recipient of Junior Research Fellowship under Indo-Finnish Exchange Programme by the Government of Finland, Calcutta Research Group, UNHCR and Brookings Institution. He has published a report on: "Finnish Asylum Policy and its Dilemmas" with the Calcutta Research Group. From 2003 to 2007 he was working with *Governance and Policy Spaces* (GAPS, Hyderabad, India) for the Ford Foundation, India. He has presented work on forced migration and on India's position at UNESCO Headquarters, Paris, France. He was chosen for the summer academy on Megacities: social vulnerability and measures to build social resilience" in the year 2007. He is an advisory council member of Winter

Course on Forced migration sponsored by Government of Finland, Calcutta Research Group, UNHCR and Brookings Institution. He has co-authored the article "The Megacity Resilience Framework" (UNU-EHS series SOURCE No. 10/2008).

Address: Dr. Nanda Kishor, Project Consultant, Centre for Energy, Environment,Urban Governance & Infrastructure Development, Administrative Staff College of India, Bellavista, Hyderabad, Andhra Pradesh, India, 500 082.
Email: <srijankishor@gmail.com>.

Michael Krause (Germany) has been employed as a Research Associate at the Potsdam Institute for Climate Impact Research (PIK) since 2007. See *biographies of authors of forewords and preface essays.*

Carmen Lacambra S. (Colombia) has recently completed her PhD at the Cambridge Coastal Research Unit, in the Department of Geography, University of Cambridge, where she is now a research associate. Her project consists on the development of an ecosystem-inclusive coastal vulnerability assessment to natural disasters in coastal areas of the Neotropics. Carmen worked for UNEP- World Conservation Monitoring Centre in the UK (2002–2005 and 2010), for the Colombian National Institute of Marine and Coastal Research – Invemar (2001–2002), for the Institute of Estuarine and Coastal Studies at the University of Hull (1998-2000), and for the Colombian Oceanic Commission (1996-1997). Most of Carmen career has developed in the field of Coastal Zone Management and the Conservation of natural ecosystems at local, national and regional level. Carmen is a biologist from the University of Los Andes in Bogota, Colombia, and holds a Masters degree in Estuarine and Coastal Science and Management from the University of Hull, UK.

Address: Dr. Carmen Lacambra, St Edmund's College, Cambridge, CB3 0BN, UK.
Email: <cl334@cam.ac.uk>.
Website: <http://www.geog.cam.ac.uk/people/lacambra-segura/>.

Kuntala Lahiri-Dutt (India/Australia) is a Fellow at the Resource Management in Asia Pacific Programme, College of Asia and the Pacific, in The *Australian National University* (ANU). She has written widely on water resource management in South Asia. Among her publications are: (co-edited with Robert Wasson): *Water First: Issues and Challenges for Nations and Communities in South Asia* (New Delhi: Sage, 2008; (ed.): *Fluid Bonds: Views on Gender and Water* (Kolkata: Stree, 2006); (guest ed.): 'Water for People', special issue of *Development*; (co-author with Gopa Samanta): "Like the drifting grains of sand: Vulnerability, security and adjustment by communities in the *char*lands of the Damodar delta", in: *South Asia: Journal of the South Asian Studies Association*, 32,2: 320-357; "People, power and rivers: Experiences from the Damodar river, India", in: *Water Nepal*, 9-10,1-2: 251-267; "Imagining rivers", in: *Economic and Political Weekly*, 35,27: 2395-2400.

Address: Prof. Dr. Kuntala Lahiri-Dutt, 231 Antill Street, Watson, ACT 2602, Canberra, Australia.
Email: <kuntala.lahiri-dutt@anu.edu.au>.
Website: <www.http://rspas.anu.edu.au/rmap>.

Anne Larigauderie (France) is the Executive Director of *DIVERSITAS* hosted by the *Muséum National d'Histoire Naturelle* (MNHN) in Paris. She received her Master's Degree in molecular biology from the University of Toulouse, France (1982), and her PhD in plant ecology from the CNRS in Montpellier, France (1985). She then spent several years in the USA, working as a research assistant, and later as a staff scientist on various projects. In Alaska, she was involved in the first pilot project performing CO2 enrichment of natural ecosystems in the tundra (1985-1987). At the San Diego State University and the University of California-Davis, she worked on root competition of California grassland species for soil nutrient pockets (1988-1990). A subsequent project at Duke University, North Carolina, focused on responses of various grass species to several scenarios of elevated CO2 and temperature, the aim of which was to predict response of grasses to future climate change (1991-1992). In 1992, she returned to Europe, working as a research scientist on the adaptation of dark respiration of lowland and alpine plant species to future elevated temperatures at the University of Basel, Switzerland. In 1996, she became the coordinator of the Swiss Priority Programme on biodiversity and the scientific advisor to the Swiss delegation to the Convention on Biological Diversity (CBD). In 1999, she joined the International Council for Science (ICSU, Paris) where she was in charge of the portfolio of programmes related to the environment (which includes DIVERSITAS). She was appointed Executive Director of DIVERSITAS in late 2001 and tasked with launching this new international programme of biodiversity science. She maintains a strong interest in biodiversity science and especially the science-policy interface.

Address: Dr Anne Larigauderie, DIVERSITAS, Muséum National d'Histoire Naturelle (MNHN), Maison Buffon, 57 rue Cuvier – CP 41, 75231 Paris, Cedex 05, France.
Email: <anne@diversitas-international.org>.
Website: <www.diversitas-international.org>.

Pietro Laureano (Italy), Architect and Town Planner, is a UNESCO consultant on arid areas, Islamic society and ecosystems in danger. He worked in the Sahara desert and coordinated projects in Algeria, Jordan, Yemen and Ethiopia. He is the author of the report on the addition of the Sassi di Matera and the Cilento Park to the UNESCO world Heritage list. As the Italian representative in the Technical-Scientific Committee in the *United Nations Convention to Combat Desertification* (UNCCD) and as President of the Traditional Knowledge Panel he promoted a world data bank on the local knowledge system. At present he is carrying out this mission with the *Research Centre on Local and Traditional Knowledge* (IPOGEA) he founded. IPOGEA's activities include coordinating EU projects in the Mediterranean, research and landscape restoration and using traditional techniques in an innovative way. His publications include: *The Water Atlas. Traditional knowledge to combat desertification* (Barcellona: Laia Libros, 2005); *Water, the cycle of the life* [in French, Spanish and Catalan] (Barcello-

na: Laia Libros, 1999); *La Piramide Rovesciata, il modello dell'oasi per il pianeta Terra* (Torino: Bollati Boringhieri, 1995); *Giardini di Pietra, i Sassi di Matera e la civiltà mediterranea* (Torino: Bollati Boringhieri, 1993).

Address: Mr. Pietro Laureano, Ipogea, Via Roma 595, 50012 Bagno a Ripoli, Florence, Italy.
E-mail: <ipogea@ipogea.org>.
Website: <www.laureano.it, www.ipogea.org>.

Rik Leemans (The Netherlands), Dr. (University of Uppsala), Professor of Environmental Systems Analysis, Environmental Sciences Department, Wageningen University and director of the WIMEK graduate school. He also chairs the international *Earth System Science Partnership* (ESSP) and the Dutch National Global Change Committee. He works on various aspects of global environmental change. He currently directs several multidisciplinary projects on land-use change, biogeochemical cycles, global biodiversity. All these projects accentuate resilience vulnerability and sustainability. His early studies at Uppsala University (Sweden) emphasized the successional dynamics and structure of boreal forests. His subsequent research position at the Biosphere Project of the *International Institute of Applied System Analyses* (IIASA, Austria) focussed on boreal forest models. During the 1990's he was a senior scientist of the *National Institute of Public Health and the Environment* (RIVM) in Bilthoven. Here, he directed the development of integrated modelling approaches for the biosphere within the IMAGE 2 model. Since then his research has excelled into modelling global environmental change. He has published many papers in books, reports and academic journals like *Science*, *Climatic Change*, *Ecological Modelling*, *Global Environmental Change* and *Ecology and Society*. He chaired the Response Option Working Group of the *Millennium Ecosystem Assessment* (MA) and was involved as a lead-author in all assessments of the *Intergovernmental Panel on Climate Change* (IPCC) that was rewarded the Nobel Peace price in 2007. He is Editor-in-chief of *Current Opinion in Environmental Sustainability*, and on the editorial board of *Ecosystems*, *Climatic Change*, *Global Environmental Change*, *Carbon Balance and Management*, and a member of *Faculty of* 1000 *Biology*. He works as a referee for the *Dutch Science Foundations* (NWO and WOTRO), the *European Research Council* (ERC) and is evaluator of academic institutions and research projects. He has been a member of several scientific associations, such as the *International Association of Vegetation Science*, *The Integrated Assessment Society* and the *American Ecological Society*.

Address: Prof. Dr. Rik Leemans, Environmental Systems Analysis Group, Wageningen University & Research, PO Box 47, 6700 AA Wageningen, The Netherlands.
Email: <rik.leemans@wur.nl>.
Website: <http://www.esa.wur.nl>.

Francisco López Bermúdez (Spain), Professor of Physical Geography at the University of Murcia since 1978. He obtained the "Juan Sebastián Elcano" National Research Award (CISC) in 1973 for his Ph.D. thesis. He has taught environmental sciences and geography. His main research issues are erosion processes and desertification. He was the main researcher in more than 30 research projects, he cooperated in 5 projects funded by the National Plan for R&D, European Commission, Environment Ministry and the Region of Murcia. He authored and co-authored 27 books and studies, 104 book chapters, 140 scientific articles in national and international journals and he edited 7 books. He was president of the Spanish Geomorphology Society (1990-1992), of the Mediterranean Committee of the International Union for Conservation of Nature, director of the University Institute for Water and Environment. He is a member of the Royal "Alfonso X" Academy. He is a member of networks on erosion studies, of Spanish and European scientific institutions, of a panel of experts that wrote the National Action Plan against Desertification. He has been teaching many courses and addressed conferences on environmental problems, erosion and desertification processes in Mediterranean environments. He is a member of the scientific board of Spanish and international journals and he has directed many theses of students.

Address: Prof. Dr. Francisco López Bermúdez, Departamento de Geografía, Univer-sidad de Murcia, Campus de La Merced, 30001 Murcia, Spain.
Email: <lopber@um.es>.

Michel Loreau (Canada) is Full Professor and Tier 1 Canada Research Chair in theoretical ecology at McGill University (Montreal, Canada). After receiving his Ph.D. from the Free University of Brussels (ULB, Belgium) in 1983, he was research assistant and senior research assistant of the National Fund for Scientific Research (Belgium), assistant lecturer and lecturer at the Free University of Brussels, programme manager at the Science Policy Office (Belgium), and professor at Pierre and Marie Curie University (Paris, France). He has won several scientific prizes, including the International Ecology Institute Prize, the Silver Medal of the National Centre for Scientific Research (France), and the Agathon De Potter and Max Poll Prizes of the Royal Academy of Belgium. He has participated in the editorial boards of many top ecology journals, including *Ecology Letters*, *The American Naturalist*, *Ecology*, *Ecological Monographs* and *Oecologia*. He is currently member of the editorial board of *PLoS Biology* and the advisory board of *Frontiers in Ecology and the Environment*. He is also head of the Section *Community Ecology and Biodiversity* of the Faculty of 1000. He has been member of numerous national and international scientific committees. In particular, he chaired the Scientific Committee of DIVERSITAS, the international programme of biodiversity science, the International Steering Committee of the consultative process towards an International Mechanism of Scientific Expertise on Biodiversity (IMoSEB), the Steering Committee of the European Science Foundation programme *Linking community and ecosystem ecology* (LINKECOL), and the Scientific Committee of the International Conference *Biodiversity Science and Governance* organized by France under the high patronage of Jacques Chirac, President of the French Republic, and Koïchiro Matsuura, Director-General of UNESCO. He is the author of over 200 scientific publications in the fields of theoretical ecology, community ecology, ecosystem ecology, population ecology, and evolution-

ary ecology. His current research aims to make a theoretical synthesis between the so far widely separated fields of biodiversity, ecosystem functioning, community organisation, and evolution of species.

Address: Prof. Dr Michel Loreau, Department of Biology, McGill University, 1205 avenue Docteur Penfield, Montreal, Quebec H3A 1B1, Canada.
Email: <michel.loreau@mcgill.ca>.
Website: <www.biology.mcgill.ca/faculty/loreau/>.

Jens Kristian Lørup (Denmark) obtained his MSc degree in agronomy in 1991 specializing in hydrology, irrigation and soil erosion. Soon after he joined the Technical University of Denmark, where he worked as research assistant and lecturer and completed his PhD study on the impact of land use change on water resources in 1998. He joined the DHI in 1993, initially on a part-time basis parallel to his PhD study and assignments for Danida and the World Bank, and he has been at DHI ever since apart from a 3½-years assignment as Danida Advisor to the Ministry of Agriculture in Bhutan. He has been involved in a number of research studies focusing on the effect of climate change and/or land use change on water resources, including on projects in Tanzania, Zimbabwe, Denmark, Egypt and the whole Nile Basin. He has comprehensive experience with training and transfer of knowledge and technology. He has conducted numerous training workshops around the world has also conducted courses at the Technical University of Denmark in hydrology, irrigation, and IWRM. Apart from Denmark, he has geographical experience from more than 15 countries through one long-term assignment and from more than 50 short-term assignments abroad, primarily in East Africa and Asia. He published on impact of land use and climate change on the water resources, including: (1998): "Assessing the effect of land use change on catchment runoff by combined use of statistical tests and hydrological modelling", in: *Journal of Hydrology*, 205, 147–163.

Address: Dr. Jens Kristian Lørup, DHI, Agern Allé 5, 2970 Hørsholm, Denmark.
Email: <jkl@dhigroup.com>.
Website: <www.dhigroup.com>.

Hermann Lotze-Campen (Germany) is leading a research group on the interactions between climate change, agriculture and food production, land and water use, and adaptation options through biomass energy production and technological change at the Potsdam Institute for Climate Impact Research. See *biographies of authors of forewords and preface essays.*

Patrick P. Meier (United States of America): Doctoral Research Fellow with the Harvard Humanitarian Initiative (HHI), Harvard University, and PhD Candidate at The Fletcher School, Tufts University. His academic and professional interests focus on improving the science, practice and impact of conflict early warning and disaster response. He is especially interested in self-organized and decentralized modes of operational warning and response. His doctoral research at Harvard University explores the impact of information communication technology (ICT) such as distributed mobile technology and high resolution satellite imagery for the purposes of humanitarian early warning, crisis mapping and disaster response. He teaches advanced seminars on "Disaster and Conflict Early Warning/Response" and "Complex Systems Analysis" to graduate students and UN agencies. He has published on early warning and has presented his cross-disciplinary research at dozens of respected conferences worldwide. Among his major publications are: Patrick/Bond 2007; Bond/Meier 2006; Meier/Linotte 2006; Bond /Meier 2005; Levy/Meier 2004. As a professional consultant, Mr. Meier has worked with the UN, OSCE, IGAD and ECOWAS. In addition, he has worked with the International Crisis Group, International Alert and the Peace Research Institute, Oslo (PRIO). Mr. Meier is an alumnus of the Santa Fe Institute (SFI) and holds an MA from Columbia University's School for International and Public Affairs (SIPA).

Address: Mr. Patrick Meier, The Fletcher School, 160 Packard Avenue, Medford, MA 02155, U.S.A.
Email: <patrick.meier@tufts.edu>.
Website: <http://fletcher.tufts.edu/phd/students/Meier.shtml>.

Monique Mainguet (France), Professor Emeritus of the University of Reims Champagne Ardenne (France), founder (1973) and director of the "*Laboratoire de Géographie Zonale pour le Développement*" (LGZD). She is honorarius member of the *"Institut universitaire de France"* (IuF) and active member of the *"Comité Scientifique Français de la Désertification"* (CSFD). Since 1975 she has been a consultant for several international organisations (UNESCO, UNEP, FAO, WMO, ESCAP, UNU) and from 1985 to 1989, she was Deputy Director of the DC PAC (Desertification Control Activity Centre) of UNEP in Nairobi (Kenya). In 2006-2007, she was a team leader of a NATO Programme Security Through Science, Collaborative Linkage Grant on: "Use of indicators for desertification in the oasian settlements" in collaboration with the universities of Errachidia (Morroco) and Blida (Algéria), and of AUF P2-2092RR521: "Techniques traditionnelles de gestion et d'utilisation de l'eau en milieu soudano-sahélien camerounais, en parallèle avec les données acquises en milieu soudano-sahélien ivoirien. Etudes de cas" with the university of Abidjan (Ivory Coast) and N'agoundéré (Cameroon). Her research interests are: societal-environment links, dryland environments, desert environmental changes, mainly through a multi-scale approach: continental with satellite imagery, regional and local with aerial photographs, the whole investigations sustained by serious fieldwork. Recent investigations have focussed on desertification in Central Asian Deserts (Uzbekistan) and in the Sahel (especially Mauritania and Senegal). Monique Mainguet has over 200 publications including 8 books and 7 "Compte-Rendus" to the French Academy of Sciences. Major publications include: *Le modelé des Grès. Problèmes généraux*. Institut Géographique National. *Etudes de Photo-interprétation* (1972), Thèse de Doctorat d'Etat; *Desertification. Natural Background and Human Mismanagement* (21994); *Aridity , Droughts and Human Development* (Heidelberg: Springer, 1999); English translation of : *L'Homme et la Sécheresse* (Paris: Masson,

éd. Collection Géographie, year); with Dumay F: "Transaharan Wind Flows analysed on Meteosat 4 satellite imagery. *Resources, urban, sand & wind, Desert Technology III*, Oct 15–20, 1995, Lake Motosu, Japan", in: *Journal of Arid Land Studies*, 53 (1995): 89–94; "Desertification: Global Degradation of Drylands", in: Brauch, Hans Günter; Liotta, P.H; Marquina, Antonio; Rogers, Paul; Selim, Mohammed El-Sayed (Eds.): *Security and Environment in the Mediterranean. Conceptualising Security and Environmental Conflicts* (Berlin-Heidelberg: pringer 2003): 645–653; with Dumay F., 2006: "Erosion éolienne et désertification" (Paris: Comité Scientifique Français de la Désertification, les dossiers thématiques n°3); *Les Pays secs, Environnement et Développement* (Paris: Ellipses, Collection Carrefour, 2005).

Address: Office: Prof. Dr. Monique Mainguet, Laboratoire de Géographie Zonale pour le Développement, Université de Reims Champagne-Ardenne, 57 Rue Pierre Taittinger, 51 100 Reims. France; Private: 24 Rue de la Cité Foulc, 30 000 Nîmes, France.
Email: <monique.mainguet@univ-reims.fr> and <monique-mainguet@orange.fr>.

Esther Marijnen (The Netherlands) holds a BSC in political science, with a focus on international relations and conflict studies at the University of Amsterdam. Currently she is doing her MA in Conflict Studies and Human Rights at the University of Utrecht. Since 2008, she is the research assistant of Prof. John Grin. Fall 2009 she spent a semester in Kigali, Rwanda, to conduct research and fieldwork for a project on "The future of Rwanda, social cohesion or social disruption" as well as for a research project of the Dutch development organisation, SNV and CARE concerning economic community-based enterprises, engaged in addressing the interconnected problems of poverty, conflict, and environmental degradation. Afterwards she was an intern at the Clingendael Institute for International Relations.

Address: Ms. Esther Marijnen, Department of Political Science, University of Amsterdam OZ Achterburgwal 237, 1012 DL Amsterdam, The Netherlands.
E-mail: <Esthermarijnen@gmail.com>.

Katharina Marre, née Thywissen (South Africa, Germany), PhD in geophysics (seismology), GeoForschungsZentrum Potsdam, University of Potsdam in Germany; MSc in geology (marine geology), University of Hamburg, Germany. She worked for the U.S. Geological Survey, Menlo Park, California; the reinsurance industry in New York on risk assessment, modeling, pricing and exposure control; on early warning at the United Nations Environment Programme, Department for Early Warning and Assessment (UNEP/DEWA) in Nairobi, Kenya (2002-2003), and on post-disaster damage assessment for a French consultant company (2003-2004). From 2004 to 2007 she was academic officer at UNU-EHS in Bonn where she also served as a senior scientific advisor to the German Federal Foreign Office (2005–2006) and as an information exchange scientist at the German Federal Ministry for Education and Research (2006–2007). From 2007 to 2008 she was a scientific advisor at UNU-ViE dealing with core institutional tasks including initiating new UN entities, relations with relevant UN and other international organizations, academic institutions of higher education, governments, and UNU headquarters in Tokyo. Since August 2008 she is on maternity leave. Among her major publications are: *Components of Risk - A Comparative Glossary*. SOURCE No. 2/2006 (Bonn: UNU-EHS); (with Buton, J.-M.; Guillande, R. 2004): "Integrated real-time natural disaster management in France", in: *Geoinformatics*; (with Boatwright J.; Seekins, L.C., 2001): "Correlation of Ground Motion and Intensity for the 17 January, 1994 Northridge, California, Earthquake", in: *Bulletin Seismic Society*, 91,4: 739–752; (with Boatwright J., 1998): "Using Safety Inspection Data to Estimate Shaking Intensity for the 1994 Northridge Earthquake", in: *Bulletin Seismic Society* of America, 88, 5: 1243–1253.

Address: Dr. Katharina Marre, Via Alberto da Sarteano 79, 00126 Rome, Italy.
E-mail: <thywissen@gmail.com>.

Mabel-Cristina Marulanda (Colombia): is a Civil Engineer (2003) of the National University of Colombia, Campus Manizales. She is a PhD student at UPC, Barcelona, Spain, in the Programme of Structural Analysis and a research assistant of the *International Centre of Numerical Methods in Engineering, Barcelona* (CIMNE). She has been involved in research projects related to the design and implementation of urban observatories using environmental indicators (2003-2004) and in the *Programme of Indicators of Disaster Risk and Risk management Management for the Americas* developed (2004-2005) and updated (2008-2009) for the IDB by the *Institute of Environmental Studies* (IDEA) of the National University of Colombia. She did graduate studies in *the National Research Institute for Earth Science and Disaster Prevention* (NIED) of Japan (2005) and she has been awarded by the ProVention Consortium's programme of applied research grants for disaster reduction (2005-2006) and by the ECOPOLIS' programme of graduate and design awards of the International Development Research Centre (IDRC) of Canada (2008-2009). Some recent and relevant publications are: (co-author with Cardona, Omar D.; Ordaz, Mario G.; Yamín, Luis E.; Barbat, Alex H., 2008): "Earthquake Loss Assessment for Integrated Disaster Risk Management", in: *Journal of Earthquake Engineering*, 12,1–2 (January): 48–59; (co-author with Carreño, Martha-Liliana; Cardona, Omar D.; Barbat, Alex H., 2009): "Holistic Urban Seismic Risk Evaluation of Megacities: Application and Robustness" in: Mendes-Victor, Luis A.; Sousa Oliveira, Carlos; Azevedo, João; Ribeiro, António (Eds.), 2009: *The 1755 Lisbon Earthquake: Revisited* (Heidelberg: Springer).

Address: Eng. Mabel-Cristina Marulanda, Jordi Girona 1-3, Mod. C1. Campus Nord, Universidad Politécnica de Cataluña, Barcelona, Spain.
Email: <mmarulan@cimne.upc.edu>.

Gordon McBean (Canada): Ph.D. (The University of British Columbia, Vancouver); Professor of Geography and Political Science and Director of Policy Studies, Institute for Catastrophic Loss Reduction, The University of Western Ontario, London. Previously: Assistant Deputy Minister,

Meteorological Service of Environment Canada; Professor of Atmospheric and Oceanic Science, The University of British Columbia. His research work has shifted from the studies of weather, climate and ocean systems to issues of environmental policy, natural hazards, weather and climate adaptation and policy issues, role of governments in hazard mitigation and weather and environmental prediction systems. He has published in the journals: *Natural Hazards, Canadian Public Policy* and *Mitigation and Adaptation Strategies for Global Change.* He is a Member of the Order of Canada, Fellow of the Royal Society of Canada, the American Meteorological Society and the Canadian Meteorological and Oceanographic Society and shared in the Nobel Peace Prize as a significant contributor to the IPCC. He is Chair of the International Council for Science (ICSU) - International Social Sciences Council - UN International Strategy for Disaster Reduction Science Committee for Integrated Research on Disaster Risk Program.

Address: Prof. Dr. Gordon McBean, Institute for Catastrophic Loss Reduction/Department of Geography, The University of Western Ontario, London, Ontario, Canada, N6A 5C2.
Email: <gmcbean@uwo.ca>.
Website: <www.iclr.org>.

Rachel McCarthy (UK) is a Climate Change Consultant and Impacts Model Developer at the Met Office Hadley Centre. She is the climate impacts coordinator on the use of Met Office decadal forecasts to inform adaptation and mitigation strategies. Her role is concerned primarily with assisting governments and businesses to understand the potential impacts of climate change and in developing tailored projects to ascertain how climate change may impact on their concerns. She has considerable experience in the regional modelling of global water resources and the impacts of climate change on agriculture. She gained a joint, first class honours bachelor's degree in physics and chemistry from the University of Durham and wrote her dissertation on polar ozone depletion.

Address: Dr. Rachel McCarthy, Met Office Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.
Email: <Rachel.mccarthy@metoffice.gov.uk>.
Website: <http://www.metoffice.gov.uk>.

Glenn McGregor (New Zealand/UK) is Director of the School of Environment, University of Auckland, New Zealand. He is a climatologist with interests in synoptic climatology, climate and health and large scale hydroclimatology. As well as researching and teaching in the field of climatology, he is Chief Editor of: *The International Journal of Climatology*, the World Meteorological Organisation's Commission of Climatology's Lead Expert on Climate and Health and the 2011 President elect of the International Society of Biometeorology. He was a special advisor on climatology for the 2008 UK Research Assessment Exercise and also a contributing author to the heath chapter of Working Group II's "Impacts, Adaptation and Vulnerability Report" for the 2007 IPCC Fourth Assessment Report on Climate Change. He continues to be involved in IPCC activities through his lead authorship of Chapter 2 entitled "Determinants of Risks: Exposure and Vulnerability", for a IPCC Special Report on *Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation* (SREX). Before joining the University of Auckland in 2008 he was professor of physical geography and climatology at King's College London and before that reader in synoptic climatology at the University of Birmingham. During his time in the UK he led as principal investigator or collaborated as co-investigator on a number of UK and EU funded projects on climate and health.

Address: Professor Dr. Glenn McGregor, School of Environment, University of Auckland Private Bag 92019, Auckland 1142, Auckland, New Zealand.
Email: <g.mcgregor@auckland.ac.nz>.
Website: <www.env.auckland.ac.nz>.

Czeslaw Mesjasz (Poland): Dr hab., Associate Professor, Faculty of Management, Cracow University of Economics, Cracow, Poland. See *biographies of editors.*

Lidia Mesjasz (Poland): Ph.D., Assistant Professor at the Department of International Economics, Cracow University of Economics, Cracow, Poland. Her research interests include: international debt, sovereign debt restructuring, financial crises, development economics. In 1988-1991 she worked in the Research Centre on Debt and Development, Jagiellonian University, Cracow. In July-August 1999 she was a Visiting Researcher at the World Bank, Washington, D.C., USA. In September-October 1999 she was a Visiting Professor in Grand Valley State University, Allendale, Michigan, USA. Among her more than 40 publications are chapters in books and papers in Polish on international debt and financial crises, including the following: "Kryzysy finansowe we współczesnej gospodarce światowej" [Financial Crises in the Current World Economy), in: Miklaszewski, Stanisław (Ed): "Międzynarodowe stosunki gospodarcze u progu XXI wieku" [International Economic Relations on the Turn of XXI Century] (Warszawa: Difin, 2006): 108-162; "Kryzys zadłużeniowy i jego konsekwencje" [Debt Crisis and its Consequences], in: Miklaszewski, Stanisław (Ed): "Kraje rozwijające się w światowym systemie gospodarczym" [Developing Countries in the World Economic System] (Warszawa: Difin, 2007): 42–101; "Rola MFW w rozwiązywaniu kryzysów finansowych" [IMF Role in Solving Financial Crises], in: "Handel i finanse międzynarodowe w warunkach globalizacji" [International Trade and Finance in Global Economy] (Poznań: University of Economics Publishing House, 2007): 216–132; "Rola sektora oficjalnego w restrukturyzacji długu państwowego" [Role of Official Sector in Sovereign Debt Restructuring], in: Noga, Marian; Sawicka, Małgorzata (Eds.): "Problemy gospodarki światowej" [World Economy's Problems]. Scientific Papers of Wroc³aw Academy of Economics, 1191 (2008): 304–315.

Address: Asst. Prof. Dr. Lidia Mesjasz, Cracow University of Economics, Pl-31-510 Kraków, ul. Rakowicka 27, Poland.
Email: <mesjaszl@uek.krakow.pl>.
Website: <http://www.katmsg.uek.krakow.pl>.

Bert Metz (The Netherlands): PhD, studied Chemical Engineering at the *Delft University of Technology*. He worked for

the *Inspectorate for Environmental Protection* of the *Netherlands Ministry of Housing, Spatial Planning and Environment*, as Senior Lecturer at the Department of Chemical Engineering at the *Ahmadu Bello University* in Zaria, Nigeria and as Counsellor for Environment and Health at the *Royal Netherlands Embassy* in Washington DC. In 1992 he became Deputy Director for Air and Energy of the *Netherlands Ministry of Housing, Spatial Planning and Environment*. In this function he was responsible for climate policy and international climate change negotiations. He was chief negotiator for the Netherlands till the agreement on the Kyoto Protocol. From 1997 to 2008 he served as co-chairman of the Working Group on Climate Change Mitigation of the *Intergovernmental Panel on Climate Change* (IPCC) of the UN. From 1998 to 2008 he has been associated with the *Netherlands Environmental Assessment Agency*, where he led the International Environmental Assessment and the Global Sustainability and Climate Division. Since his retirement in 2008 he is a fellow at the European Climate Foundation, a member of the Scientific Advisory Board of the Mediterranean Climate Centre in Italy and of the editorial board of the journal Climate and Development. Among his major publications are: Third and Fourth Assessment Report, Working Group III IPCC, IPCC Special Reports on Technology Transfer, CO_2 Capture and Storage and Ozone and Climate

Address: Dr. Bert. Metz, Westerlookade 4, 2271 GA, Voorburg; The Netherlands.
E-mail: <bert.metz@europeanclimate.org.com>.
Website: <http://www.ipcc.ch/ipccreports/ar4-wg3.htm>.

Sami Moisio (Finland): Ph.D., Docent in Political Geography and Academy of Finland senior research fellow at the Department of Geography of the University of Turku. He served formerly as assistant professor of IR at the University of Lapland and assistant professor of Human Geography at the Universities of Oulu and Turku. His research focuses on geopolitics, regional transformation, and European integration. He is the author of several publications and articles on European integration, geopolitical theory, northern Europe and Finland. He has published papers in these areas in, for instance, in: *Geopolitics*, *National Identities*, *Cooperation and Conflict*, *World Political Science Review*, and *Scottish Geographical Journal*.

Address: Dr. Sami Moisio, Department of Geography, University of Turku, FIN-20014, Turku, Finland.
Email: <sami.moisio@utu.fi>.
Website: <http://www.sci.utu.fi/maantiede/English/Staff/moisio_e.htm>.

Christoph Müller (Germany) is a Geoecologist and holds a Ph.D. from Potsdam University and the International Max Planck Research School on Earth System Modelling in Hamburg, Germany. See *biographies of authors of forewords and preface essays.*

Mathews Mullackal (India) is heading the Programme Development Group in *Jal Bhagirathi Foundation* (JBF). He is primarily responsible for developing new programmes, adding value to the existing projects and action oriented research. He has a unique multidisciplinary educational background. He did his bachelor's degree in Civil Engineering from the University of Calicut, post graduate diplomas in Environmental Management and NGO Management from Annamalai University and a Masters degree in International Development from the University of Bristol, UK. Moreover, he has eight years of work experience mainly in the water and development sector in India and in the Middle East. He is experienced in all phases of project development, budgeting, implementation, monitoring and evaluation, including research, strategic planning, analytical work, community mobilization and organizational management. He has a strong interest in environment and development and believes that bottom-up development leading to community empowerment and emancipation of marginalized sections is essential for addressing the challenges of the present world.

Address: Mr. Mathews Mullackal, Jal Bhagirathi Foundation, Near Kayalana Lake, Bijolai, Jodhpur, Rajasthan, India.
Email: <programs@jalbhagirathi.org>.
Website: <www.jalbhagirathi.org>.

Sreeja Nair (India): Associate Fellow with the Center for Global Environment Research at *The Energy and Resources Institute* (TERI) in New Delhi. She works on issues pertaining to climate change impacts, vulnerability and adaptation assessment. An inter-disciplinary researcher with a Bachelors degree in biomedical sciences and a Masters in environmental studies and a Masters in Climate & Society (Columbia University), she works on crosscutting issues and policy analysis related to climate change, across both natural science and social science realms. She has worked extensively assessing the impact of environmental and developmental stressors on populations, with a major focus on the agriculture and water sector. Broadly, her interest areas include exploring the social dimensions of population-environment-development synergies and conflicts.

Address: Ms. Sreeja Nair, TERI (The Energy and Resources Institute), Darbari Seth Block, India Habitat Centre, Lodi Road, New Delhi 110 003, India.
Email: <sreejan@teri.res.in> and <suresree@gmail.com>.
Website: <http://www.teriin.org>.

Fabien Nathan (France), Project Manager at Sogreah Consultants in Echirolles, France. He obtained a PhD from the *Graduate Institute of International and Development Studies* (IHEID, Geneva). He graduated in sociology and history, then obtained master degrees in sociology and in development studies. His main area of work are: sociology of risks and disasters, vulnerability and resilience analysis, risk management, participatory community planning, resettlement, and public consultation. His publications include: "Natural Disasters, Vulnerability, and Human Security", in: Brauch, Hans Günter; Grin, John; Mesjasz, Czeslaw; Krummenacher, Heinz; Chadha Behera, Navnita; Chourou, Béchir; Oswald Spring, Ursula; Kameri-Mbote, Patricia (Eds.): *Facing Global Environmental Change: Environmental, Human, Energy, Food, Health and Water Security Concepts* (Berlin–Heidelberg–New York: Springer-Verlag, 2009): 1121–1129; "Comprendre le risque et la vulnérabilité.

Une perspective de sciences sociales à propos des risques de glissement de terrain à La Paz, Bolivie", in: Becerra, Sylvia; Peltier, Anne (Eds.), *Risques et environnement: recherches interdisciplinaires sur la vulnérabilité des sociétés* (Paris: L'Harmattan, 2009): 117–128; "Risk perception, risk management and vulnerability to landslides in the hill-slopes in the city of La Paz, Bolivia. A preliminary statement", in: *Disasters,* 32/3 (Autumn 2008): 337–357.

Address: Dr. Fabien Nathan, 4, rue de la bajatière, F-38100 Grenoble, France.
Email: <nathan.fabien@gmail.com>.
Website: <http://www.afes-press.de/html/download_nathan.html>; <http://www.nccr-north-south.unibe.ch/Person/person.asp?contextID=&Context=NCCR&refTitle=the%20NCCR%20North-South&ID=709> and <http://www.socialresilience.ch/bolivia>.

Hiromi Nishimoto (Japan) is a Ph.D. student of the Graduate School of Global Environmental Studies, Kyoto University.

Address: Ms. Hiromi Nishimoto, C cluster, Kyotodaigakukatsura, Nishigyo-ku, Kyoto-shi, Kyoto 6158540, JAPAN,
Email: <h-nishimoto@athehost.env.kyoto-u.ac.jp>.

Carlos A. Nobre (Brazil), Senior Scientist at the Brazilian *Institute for Space Research* (INPE), is chair of the Scientific Committee of the *International Geosphere-Biosphere Programme* (IGBP). He obtained a degree in Electronics Engineering at the Brazilian Technological Institute of Aeronautics and a doctoral degree in Meteorology at the *Massachusetts Institute of Techology* (MIT). He was director of INPE's *Center for Weather and Climate Forecasting* (CPTEC) during 1991-2003 and the Programme Scientist for the Large Scale Biosphere-Atmosphere Experiment in Amazonia (1996-2002). His research insterests range from tropical meteorology and Amazonia to climate modeling, biosphere-atmosphere interactions and climate change.

Address: Prof. Dr. Carlos A. Nobre, Centro de Previsao de Tempo e Estudos Climaticos, Instituto Nacional de Pesquisas Espaciais, C. Postal 01, Rodovia Presidente Dutra,12630-000 Cachoeira Paulista, São José dos Campos, Brazil.
Email: <carlos.nobre@inpe.br>.
Website: <http://www.inpe.br>.

Kevin Noone (United States/Sweden) is a Professor and has joint appointments at the Department of Applied Environmental Science and the Stockholm Resilience Centre at Stockholm University, and is Director of the Swedish Secretariat for Environmental Earth System Sciences at the Royal Swedish Academy of Sciences. He is the co-theme leader of the Global Environmental Change theme at Stockholm Resilience Centre and is head of the Atmospheric Science Division at the Department of Applied Environmental Science (ITM), Stockholm University, Sweden. He has degrees in Chemical Engineering, and Civil and Environmental Engineering from the University of Washington in Seattle, WA (USA). He was on the faculty at the Department of Meteorology, Stockholm University from 1987-91, a research scientist and Adjunct Professor of Oceanography at the Center for Atmospheric Chemistry Studies, Graduate School of Oceanography at the University of Rhode Island (USA) from 1992-1995, and was Professor of Meteorology and head of the Atmospheric Physics Division at the Department of Meteorology, Stockholm University from 2000-2004. From 2004-2008 he was the Executive Director of the International Geosphere-Biosphere Program (IGBP), and a member of the Earth System Science Partnership (ESSP). In autumn 2008 he moved back to Stockholm University, and moved half time to the Royal Swedish Academy of Sciences in 2010. Early research work in Chemical Engineering focused on transparent semiconductors for use as solar cells in the generation of electricity. His primary research interests at present are in the area of atmospheric chemistry & physics, the effects of aerosols and clouds on air quality and the Earth's climate, global environmental change, and Earth System Science. He is an advocate of an interdisciplinary approach to obtaining a solid scientific basis for decisions on environmental and climate issues. He is author/coauthor of more than 120 scientific articles and book chapters. He has headed up of a number of large international field experiments, and is (or has been) a member of a number of international committees and boards, currently including the European Academies Science Advisory Council´s Environment Steering Panel. He is Associate Editor of the journals *Ambio* and Atmospheric Research, and was Editor in Chief of the IGBP Global Change Newsletter. He is active in conveying science to stakeholders and the general public. He regularly gives presentations and short courses on climate and Earth System Science for non-science audiences. He also interacts regularly with the media in international arenas.

Address: Prof. Dr. Kevin Noone, Department of Applied Environmental Science, Stockholm University, SE-106 91 Stockholm, Sweden.
Email: <zippy@itm.su.se>.
Website: <http://www.itm.su.se>.

U. Joy Ogwu (Nigeria), Ambassador, currently serves as the Permanent Representative of Nigeria to the United Nations. Prior to her appointment as Nigeria's Foreign Minister in August 2006 she served as the first female Director-General of the Nigerian Institute of International Affairs (NIIA). . See *biographies of authors of forewords and preface essays.*

Hiroshi Ohta (Japan), Professor at the School of International Liberal Studies, Waseda University. He received a Ph.D. in international relations from the Department of Political Science of the Graduate School of Arts and Sciences of Columbia University in New York City. Some recent relevant works to this volume include: "Japanese Foreign Policy on Climate Change: Diplomacy and Domestic Politics", in: Harris, Paul G. (Ed.): *Climate Change and Foreign Policy: Case Studies from East to West* (London: Routledge, 2009: 36–52); "A Small Leap forward: Regional Cooperation for Tackling the Problems of the Environment and Natural Resources in Northeast Asia", in: Timmermann, Martina; Tsuchiyama, Jituso (Eds.): *Institutionalizing Northeast Asia: Regional Steps towards Global Governance* (New York: United Nations University, 2008: 297-315); "Japanese

Environmental Foreign Policy and the Prospects for Japan-EU Cooperation: The Case of Global Climate Change", in: Ueta, Takako; Àemacle, Eric (Eds.): *Japan and Enlarged Europe: Partners in Global Governance* (Brussels: Peter Lang, 2005: 99-126).

Address: Prof. Dr. Hiroshi Ohta, Ph.D., School of Liberal Studies, Waseda University, 1-6-1 Nishi-Waseda, Shinjuku-ku, Tokyo, 169-8050, Japan.
E-mail: <h-ohta@waseda.jp>.

Felix Bayode Olorunfemi (Nigeria), Dr., Research Fellow at the *Nigerian Institute of Social and Economic Research* (NISER), Ibadan. He obtained his PhD in Geography from the University of Ibadan, Nigeria in 2004 with funding assistance from the *Council for the Development of Social Science Research in Africa* (CODESRIA), Dakar, Senegal. He is also a Research Fellow of the Earth System Governance Project, a core project of the *International Human Dimensions Programme on Global Change* (IHDP), Bonn, Germany. At present, he is executing a fellowship programme awarded by the Global Change *SysTems Analysis for Research and Training* (START), Washington DC, under the *African Climate Change Fellowship Programme* (ACCFP) at the University of Cape Town, Climate Systems Analysis Group, South Africa. The fellowship project focuses on flood risks and sustainable adaptation in selected informal settlements in the city of Cape Town. Some of his recent publications include; (2009): "Willingness to Pay for Improved Environmental Quality Among Residents Living in Close Proximity to Landfills in Lagos Metropolis", in: *African Research Review*, 3,1 (April): 97-110; (with U.A Raheem, 2006-2007): "Urban Development and Environmental Implications: The Challenge of Urban Sustainability in Nigeria", in: *Australasian Journal of African Studies* (African Studies Association of Australasian and the Pacific [AFSAAP], Australia), 28: 74-96; (with F. Olokesusi, 2006): "Noise Pollution", in: Matt, F.; Ivbijaro, F.; Akintola, Festus; Okechukwu, R.V (Eds.) *Sustainable Environmental Management in Nigeria* (Ibadan, Nigeria: Mattivi Production): 139-146.

Address: Dr. Felix Bayode Olorunfemi, Physical Development Department, Nigerian Institute of Social and Economic Research, PMB 05, U.I P.O, Ojoo, Ibadan, Oyo State, 200001, Nigeria.
E-mail: <felixba2000@yahoo.com>.

Konrad Osterwalder (Switzerland) has been the fifth Rector of the United Nations University and Under-Secretary-General of the United Nations since 1 September 2007. See *biographies of authors of forewords and preface essays*.

Úrsula Oswald Spring (Mexico), Research Professor at the National University of Mexico (UNAM), in the Regional Multidisciplinary Research Center (CRIM) in Cuernavaca. See *biographies of editors.*

Mohamedou Ould Baba Sy (Mauritania), Hydrogeological Expert in charge of information systems and modelling in the water sector at the *Sahara and Sahel Observatory* (OSS). He obtained a university diploma in 1992, he became a principal engineer in geology in 1996, he obtained a master degree on sedimentary basins in 1998 from the Faculty of Science of Tunis (Tunisia) and in 2005 he received a PhD also from the Faculty of Science of Tunis (Tunisia), specializing in hydrogeology. He joined the *Sahara and Sahel Observatory* (OSS) in 2000 as an engineer assisting hydrogeologists within the framework of the *North Western Sahara Aquifer System Project*" (NWSASS) and since January 2007 he is a Water Programme Officer, where he contributes his skills on hydogeological modelling, databases and Geographical Information Systems (GIS) management He contributed to the publication of the project reports. He acted as a hydrogeologist expert for the project "Managing risks of the Iullemeden aquifer system (Western Africa)" for which he developed the hydrogeological model and the data base. He wrote the reports on the Iullemeden model and on the database.

Address: Dr. Mohamedou Ould Baba Sy, Observatoire du Sahara et du Sahel (OSS), Boulevard du Leader Yasser Arafat, BP 31, 1080, Tunis, Tunisia.
Email: <lamine.babasy@oss.org.tn>.
Website: <www.oss-online.org>..

Anna Paldy (Hungary) is a Medical Epidemiologist MPH, PhD with 30 years experience in different fields of environmental health. She has been working at the National Institute of Environmental Health (former National Institute of Public Health) since 2008 heading the Division of Health Impact Forecast. Since 2002 she has been the deputy director of the institute. She has been involved in several multi centre as well as Hungarian studies. Her research field covered cytogenetics, environmental epidemiology focusing on the effect of pesticides, air and water pollutants. She was actively involved in the implementation of the National Environmental Health Action Programme. She has been frequently invited as temporary advisor in climate and health related issues by the WHO. In the last 10 years she studied the health impact of environmental pollution on mortality and morbidity, among others the health impact of climate change. She has largely contributed to the elaboration of the National Climate Adaptation Strategy and of the heat-health early warning system in Hungary. She has been participating in the activity of the research group on Adaptation to Impacts of Climate Change of the Hungarian Academy of Science. She is a member of the National Environmental Council, she acted as a president of the Central-Eastern European Chapter of the International Society of Environmental Epidemiology. She is president of the Society of Hungarian Hygienists. She has leading the module of Environmental Epidemiology at the School of Public Health in Debrecen, Hungary. She authored and co-authored more than 30 peer-reviewed papers and book chapters.

Address: Anna Paldy, MD, MPH, PhD, National Institute of Environmental Health, Gyali ut 2-6, Budapest, 1097, Hungary.
Email: <paldy.anna@oki.antsz.hu>.
Website: <http://www.oik.antsz.hu>.

Erika Palin (UK) is a Climate Change Consultant at the Met Office Hadley Centre. She obtained a first-class Master of Natural Sciences degree from the University of Cambridge in 2000, and remained at Cambridge for her PhD, which she completed in 2003. Subsequently, she worked in academic research at the Royal Institution of Great Britain and the University of Cambridge, and published eighteen peer-reviewed papers during her academic career. She joined the Met Office Hadley Centre in 2008, where her role involves assisting commercial and government customers to understand the potential impacts of climate change on their operations. She has recently worked on projects involving the assessment of climate risk in various African countries; seasonal forecasting of winter wave heights in the North Sea; and understanding the effects of climate change on energy infrastructure in the Northeast USA.

Address: Dr Erika Palin, Met Office Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.
Email: <Erika.palin@metoffice.gov.uk>.
Website: <http://www.metoffice.gov.uk>.

Jean Palutikof (United Kingdom), Ph.D., is Director of the National Climate Change Adaptation Research Facility at Griffith University. She took up the role in October 2008, having previously managed the production of the *Intergovernmental Panel on Climate Change* (IPCC) Fourth Assessment Report for Working Group II (Impacts, Adaptation and Vulnerability), while based at the UK Met Office. Prior to joining the Met Office, she was a Professor in the School of Environmental Sciences, and Director of the Climatic Research Unit, at the University of East Anglia, UK, where she worked from 1979 to 2004, and a Lecturer at the Department of Geography, University of Nairobi, Kenya, from 1974 to 1979. Her research interests focus on climate change impacts, and the application of climatic data to economic and planning issues. She specializes in the study of changes in extreme events and their impacts, especially windstorm. She was a Lead Author for Working Group II of the IPCC Second and Third Assessment Reports. She has authored more than 200 papers, articles and reports on the topic of climate change and climate variability. Her proudest moment to date was attending the ceremony in 2007 at which the IPCC was awarded the Nobel Peace Prize.

Address: Prof. Dr. Jean Palutikof, NCCARF, Gold Coast Campus, Griffith University, Queensland, Australia 4222.
Email: <j.palutikof@griffith.edu.au>.

Martin Parry OBE (United Kingdom), Ph.D., was recently Co-Chair of Working Group II (Impacts, Adaptation and Vulnerability) of the *Intergovernmental Panel on Climate Change* (IPCC). Formerly he was Professor of Geography at the Universities of Oxford, University College London, Birmingham and the University of East Anglia. He is currently a visiting professor at Imperial College, University of London. He was chairman of the UK Climate Change Impacts Review Group, and a coordinating lead author in the IPCC's first, second and third assessments. His main research interests concern impacts and adaptation on agriculture. He has published 5 books and about 150 scientific papers on climate change impacts.

Address: Prof. Dr. Martin Parry OBE, Grantham Institute and Centre for Environmental Policy, Imperial College London, South Kensington Campus, London SW7 2AZ, UK.
Email: <martin@mlparry.com>.

Mark Pelling (UK) is Reader in Human Geography, and Chair of the Environment, Politics and Development Research Group King's College London. Before this he was Lecturer in Geography at the University of Liverpool (UK) and University of Guyana (Guyana). His PhD on a political ecology of social vulnerability to urban flooding in Guyana was awarded by the University of Liverpool in 1998. His research focuses on social vulnerability and adaptation to environmental risks including those associated with climate change with a particular interest in urban governance and poverty alleviation. His publications include: *Adaptation to Climate Change: A Progressive Vision of Human Security* (London: Routledge, 2010); (with Ben Wisner, Ed.)*: Disaster Risk Reduction: Cases from Urban Africa* (London: Earthscan, 2009); *The Vulnerability of Cities: Natural Disaster and Social Resilience* (London: Earthscan, 2003) and (Ed.) *Natural Disasters and Development in a Globalizing World* (London: Routledge, 2003). He has been a consultant with UN-HABITAT, UNDP, DFID and the ProVention Consortium. He has acted as chair of the Climate Change Research Group, Royal Geographical Society, 2004-2009; as a member of the International Advisory Committee for the ProVention Consortium, 2005–2010, and; as a Lead Author in the IPCC Special Report on *Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation*, 2008–2011. As an active member of the *International Human Dimensions Programme* (IHDP), he has served as an associate of *the Global Environmental Change and Human Security* (GECHS), and *Urban Global Environmental Change* (UGEC) research programmes and also on the UK Committee for Human Dimensions of Global Environmental Change.

Address: Dr. Mark Pelling, Department of Geography, King's College London, Strand, London WC2R 2LS, UK.
Email: <mark.pelling@kcl.ac.uk>.
Website: <http://www.kcl.ac.uk/schools/sspp/geography/people/acad/pelling/>.

Ariel Macaspac Penetrante (Germany/Philippines): PhD candidate at the universities of Vienna and Cologne. He is coordinator of the Processes of International Negotiation at the *International Institute for Applied Systems Analysis* (IASA), where he researches on international negotiation in collaboration with the United Nations, the *Comprehensive Nuclear Test Ban Organisation* (CTBTO) and the United States Institute for Peace. He holds a M.A. in political science, sociology and education from the Ludwig-Maximilians-University in Munich and a M.A. in Mediation from the Vriadrina European University in Frankfurt (Oder) and Humboldt University in Berlin (Germany). His areas of interest are mediation, conflict management, climate change, negotiation, small arms and light weapons, circular migration, and education of migrants. He has worked with the

CTBTO in evaluating a large-scale exercise in Kazahkstan (2008), with the Philippine government negotiating panel for the Mindanao peace process (2008-2009), and lectured at the De La Salle University in Manila, Philippines. He contributes to the PinPoints Magazine on international negotiation. Major publications: "Common But Differentiated Responsibilities – the North-South Divide in the Climate Change Negotiations", in: Sjöstedt, Gunnar; Penetrante, Ariel Macaspac (Eds.): *Climate Change Negotiations: A Guide to Resolving Disputes and Facilitating Multilateral Cooperation* (London: Earthscan, 2010); Mass-killings and mass-violence in Southern Philippines – Negotiating Identity Conflicts", in: Zartman, William, I; Meerts, Paul; Anstey, Mark (Eds.): *External Efforts to Promote Negotiation in Identity Conflicts* (forthcoming 2010); "Micro- and Macroperspectives in the Point of Entry Negotiation of the Comprehensive Nuclear Test-ban Treaty", in: Hampson, Fen Osler; Melamud, Mordechai; Meerts, Paul (Eds.): *CTBT in Motion* (forthcoming 2010).

Address: Mr. Ariel Macaspac Penetrante, International Institute for Applied Systems Analysis, Schlossplatz 1, A-2361 Laxenburg, Austria.
Email: <macaspac@iiasa.ac.at>.

Alexander Popp (Germany) is a Research Fellow at the Potsdam Institute for Climate Impact Research (PIK) and head of the working group on land use management in Research Domain III - Sustainable Solutions.

Juan Manuel Quiñonero-Rubio (Spain), Ph D candidate at the University of Murcia, a Researcher in the Programme on Water Sources Management at the Technical University of Cartagena. He graduated in geography in June 2005 at the University of Murcia. He collaborated in several national and regional environmental projects working on *Geographical Information Systems* (GIS) and in fieldwork on hydrology and erosion control. In September 2005 he worked on sediments transport at the Earth Sciences Institute "*Jaume Almera*" with a research fellowship of the *National Research Council of Spain* (CSIC). In December 2006 he was granted the 1st National Award on Geography by the Science and Education Ministry of Spain. From 2005 to 2008 he worked on hydrological modelling and digital elevation models analysis to improve geomorphologic maps and hydrological processes. He studied soil erosion protocols and laboratory and hydrological response at the University of Bristol, UK. Since May 2008 he worked on regional spatial planning for the government of Murcia to apply GIS on roads, and since 2009 he works for the Centre of Soil Science and Applied Biology of Segura of the CSIC in Murcia on GIS, hydrology, erosion control and geomorphology within the European project MIRAGE.

Address: Mr. Juan Manuel Quiñonero-Rubio, Centro de Edafología y Biología aplicada del Segura, CSIC, Campus de Espinardo, 30100 Espinardo, Murcia, Spain.
Email: <jumaqu@gmail.com> and <jmrubio@cebas.csic.es>.

Usman Adebimpe Raheem (Nigeria) teaches Human Geography at the University of Ilorin, Nigeria where he has been teaching and conducting research for more than a decade. He is a final stage doctoral student of health geography at the University of Ibadan. His research interests cover the broad area of medical geography with an emphasis on urban health, climate change and risk analysis. He has participated in several international conferences and training workshops including the 6th *International Human Dimensions Programme* (IHDP) in Germany, 2005. He also received the *World Meteorological Organization* (WMO) travel grant to attend the *Earth System Science Partnership* (ESSP) Open Science Conference in China, 2006, the 5th IHDP Workshop, New Delhi, 2008 and the *Bergen Summer Research School* (BSRS) on Global Development Challenges, Norway, 2009. He is a member of several learned societies both at home and abroad including the Canadian Society for International Health, International Society for Urban Health, USA, *International Society for Ecological Economics* (ISEE), *International Association for Research in Income and Wealth* (IARIW) and *Association of Nigerian Geographers* (ANG). He also published widely in reputable local and international research journals. His recent publications include (with F.B Olorunfemi, 2008): "Sustainable Disaster Risk Reduction in Nigeria: Lessons for Developing Countries", in: *African Research Review*, 2,2 (April): 187-217; "Biodiversity Management and Poverty Reduction in Nigeria: Towards a Pro-Poor Approach", in: *Ethiopian Journal of Environmental Studies and Management*, 1,8 (2008): 23-32.

Address: Mr. Usman Adebimpe Raheem, Department of Geography, Faculty of Business and Social Sciences, University of Ilorin, Ilorin, Nigeria.
E-mail: <adebimpeusman@yahoo.com>.
Website: <www.unilorin.edu.ng>.

Andreas Rechkemmer (Germany) is presently a Guest Professor of Political Science at the Beijing Normal University, China and he teaches in the *International Master of Environmental Science* (IMES) Programme of the University of Cologne. He advises the United Nations, the *Global Risk Forum* (GRF) Davos, and *the European Association of Development Research and Training Institutes* (EADI). He is a Visiting Scholar at the Warner College of Natural Resources at Colorado State University. From 2005 to 2009, he was Executive Director of the *International Human Dimensions Programme on Global Environmental Change* (IHDP). He holds a masters degree in philosophy and political science and a PhD in international relations. He has published several books as well as numerous book chapters and journal articles. Among others, he is the author of *Postmodern Global Governance* (2004) and the editor of: *UNEO – Towards an International Environment Organization* (2005). He has a distinct background in science for policy-making processes, and has worked with the UN in several functions, as well as with the *Social Science Research Centre Berlin* (WZB), the *German Institute for International and Security Affairs* (SWP), and the *European School of Governance* (EUSG).

Address: Dr. Andreas Rechkemmer, Global Risk Forum (GRF), CH-7270 Davos, Switzerland.
Email: <secretariat@rechkemmer.net>.

Boualem Rémini (Algeria), Professor in the Department of Water Sciences and Environment of the Blida University (Algeria); specialist of fluids (wind actions and water runoff). He has a doctorate in hydraulic status of the National Polytechnic School of Algiers (1997) and a doctorate in geography obtained at the University Champagne Ardenne of Reims (2001). He received the award for best publication of Algeria in 2006. In 2006-2007 he was involved in the NATO Programme Security Through Science, Collaborative Linkage Grant on: "Use of indicators for desertification in the oasian settlements" in collaboration with the University of Reims Champagne Ardenne (France) and Errachidia (Morroco). His over 100 publications, among them 5 books, include: Doctorate thesis of 1997: "Siltation of dams in Algeria: Magnitude, mechanisms and extraction of density current"; Doctorate thesis in Geography at the University Champagne Ardenne of 2001: "Mega-barriers and their influence on the wind action and sand encroachment in oasis". His latest book: *The foggara* (Algiers: Office of University Publications, 2008); "Evolution of large dams in arid regions: a few examples of Algeria", in: *Secheresse*, 20,1 (2009): 96-103.

Address: Prof. Dr. Boualem Remini, Faculty of Engineering Sciences, Department of Sciences of Water and Environment, Saad Dahlab University, Blida, Algeria.
Email: <reminib@yahoo.fr>.

Fabrice Renaud (France) is Associate Director and Head of the Environmental Vulnerability and Energy Security Section at the *United Nations University - Institute for Environment and Human Security* (UNU-EHS). He holds a PhD in agronomy (soil physics) from the University of Arkansas (USA). He has broad expertise in the fields of agronomy, soil science, and pesticide fate modelling. He has worked on rural development projects in Namibia where he mainly carried out farming system surveys and in Thailand where he worked on soil conservation projects. At UNU-EHS he is responsible for developing concepts and projects dealing with the environmental dimension of vulnerability; water pollution; land degradation; and energy security which also represent his main research foci. He supervises PhD candidates and is involved in capacity development in academia and in training seminars and workshops. Among his major publications are: (co-author with Bellamy, P.H.; Brown, C.D., 2008): "Simulating pesticides in ditches to assess ecological risk (SPIDER): I. Model description", in: *Science of the Total Environment*, 394: 112-123; (co-author with Brown, C.D., 2008): "Simulating pesticides in ditches to assess ecological risk (SPIDER): II. Benchmarking for the drainage model", in: *Science of the Total Environment*, 394: 124-133; (co-author with Bogardi, J.J.; Dun, O.; Warner K., 2007): *Control, adapt or flee: How to face environmental migration?* InterSecTions No.5/2007 (Bonn: UNU-EHS); "Environmental components of vulnerability", in: Birkmann, Joern (Ed.): *Measuring vulnerability to natural hazards. Towards disaster resilient societies* (Tokyo: UNU Press): 117-127; (co-author with Brown, C.D.; Fryer, C.J.; Walker A; 2004). "A lysimeter experiment to investigate temporal changes in the availability of pesticide residues for leaching", in: *Environmental Pollution*, 131,1: 81-91; (co-author with Birkmann, J., Damm, M. and Gallopín, G.C. (in press): "Understanding multiple thresholds of coupled social-ecological systems exposed to natural hazards as external shocks", in: *Natural Hazards*; (co-author with Dun, O., Warner, K. and Bogardi ,J. (in press): "A decision framework for environmentally induced migration", in: *International Migration* (manuscript accepted for publication); (co-author with Kaplan, M. and Lüchters, G., 2009): "Vulnerability Assessment and Protective Effects of Coastal Vegetation during the 2004 Tsunami in Sri Lanka", in: *Natural Hazards and Earth System Sciences*, 9:1479-1494.

Address: Dr. Fabrice Renaud, UN Campus, Hermann-Ehlers Str. 10, 53111 Bonn, Germany.
Email: <renaud@ehs.unu.edu>.

Martin Rice (UK), Coordinator of the *Earth System Science Partnership* (ESSP) based in Paris, France. The ESSP is a joint initiative of four global environmental change research programmes: (DIVERSITAS - an international programme of biodiversity science, IHDP - International Human Dimensions Programme on Global Environmental Change, IGBP-International Geosphere-Biosphere Programme, and WCRP-World Climate Research Programme). The Partnership allows for an integrated study of the Earth system, the ways that it is changing, and the implications for global and regional sustainability. Prior to working for the ESSP, Martin Rice was a Programme Manager for the Asia-Pacific Network for Global Change Research in Kobe, Japan. He has a Master of Science in Environmental Management and a Master of Arts (Hons.) in Geography and International Relations from the University of Aberdeen, Scotland.

Address: Martin Rice, ESSP Coordinator, c/o DIVERSITAS, Muséum National d'Histoire Naturelle, 57 rue Cuvier - CP 41, 75231 Paris Cedex 05, France.
Email: <mrice@essp.org>
Website: <www.essp.org>.

Badaoui Rouhban (Lebanon): Dr., Director, Section for Disaster Reduction in the Natural Sciences Sector, UNESCO. Within UNESCO he is the focal point for the *United Nations International Strategy for Disaster Reduction* (UN/ISDR). He manages and coordinates international activities related to the scientific, engineering and educational aspects of natural disaster studies and prevention. He is involved in several United Nations projects and mechanisms concerning disaster risk reduction. He holds a degree of Doctor of Engineering from the University 'Pierre & Marie Curie' in Paris and has carried out post-doctoral research at the Tokyo Institute of Technology. He joined UNESCO in 1981. He authored several papers and articles and is co-editor of the book: *Assessment and mitigation of earthquake risk in the Arab region* (Paris: UNESCO).

Address: Dr Badaoui Rouhban, Natural Sciences Sector, UNESCO, 1 rue Miollis, 75732 Paris, France.
Email: <b.rouhban@unesco.org>.
Website: <http://www.unesco.org/science/>.

Uriel N. Safriel (Israel), Professor of Ecology at the Hebrew University of Jerusalem, Israel. He received his D. Phil. at Oxford University in 1967, and spent two post-doctoral years at the University of Michigan. He served as Head of the Department of Zoology of the Hebrew University of Jerusalem, Chief Scientist in Israel's Nature and Parks Authority, Head of the Mitrani Department of Desert Ecology at the Blaustein Institutes for Desert Research (at the Sede Boqer Campus of Ben-Gurion University) and as the Director of these Institutes. He headed the Israeli delegations to the United Nations Convention to Combat Desertification (UNCCD) and functions as the Israeli Focal Point of this Convention. He carried out research and published papers and book chapters on population, community and behavioural ecology of birds and mollusks of marine intertidal, desert and tundra environments. His current research focuses on the interlinkages between desertification, biodiversity and climate change in drylands. He participated as Lead Author, Coordinating Lead Author and Review Editor in the 2nd, 3rd and 4th IPCC Assessment Reports, in the Millennium Ecosystem Assessment Report and Synthesis, and in UNEP's Global Outlook of Deserts report.

Address: Prof. Dr. Uriel N. Safriel, Department of Evolution, Ecology and Systematics, Berman Building, Safra Campus of the Hebrew University of Jerusalem, 91904 Israel.
Email: <uriel36@gmail.com>.

Hilmi S. Salem (Palestine/Canada), Director General, *Applied Sciences and Engineering Research Centers* (ASERCs), *Palestine Technical University, Kadoorie* (PTUK is a multidisciplinary scientist; Ph.D. in engineering geophysics and petrophysics, Kiel University, Kiel, Germany. He has degrees and professional experience in multidisciplinary areas of the natural sciences and engineering, and in the humanities (socio-economics and politics), gained from institutions in the Middle East, Europe and North America. He has participated in inter- and multinational (micro to mega) projects, aiming at sustainable development on water resources management and development, the environment, climate change, renewable energy, agriculture, land reclamation, food security, biodiversity, transportation, drilling technology, seismicity, earthquake seismology, porous-media characterization, onshore and offshore oil and gas exploration, *geographic information systems* (GIS) and remote sensing, computer modelling and applications, gender mainstreaming, poverty, economics, demography, human rights, democracy, justice, peace, transparency and governance. He has worked in administration, management, consulting, teaching at universities, and research and development at academic, industrial, governmental and non-governmental institutions. He authored and co-authored books, chapters in books, atlases, technical reports, project proposals, policy and strategy position papers, and many articles in international peer-reviewed journals, and others presented at several international conferences. He is a member in scientific and professional societies. He received several honorary awards, including, for instance, the Kapitsa Medal, and the International Award of Energy Globe-2008 at the European Parliament in Brussels, Belgium. He was nominated for other international awards for his contributions to research and development on water resources management, the environment, climate change, and renewable energy.

Address: Dr. Hilmi S. Salem, Director General, Applied Sciences and Engineering Research Centers (ASERCs), Palestine Technical University, Kadoorie (PTUK), P.O. Box 7, Kadoorie Circle, Yaffa Street, Tulkarm, West Bank, Palestine.
E-mails: <hilmisalem@yahoo.com>; <salem.bethlehem@gmail.com>; <hilmisalem@live.com>.

Michael Sanderson (UK) is a Senior Climate Consultant at the Met Office Hadley Centre. He graduated from the University of York in 1994 with a First Class BSc and D. Phil in Atmospheric Chemistry. Next, he worked as a post-doctoral assistant at Cambridge University, first researching the global methane budget and then building and testing a lightweight ozone monitor which used a gas sensitive resistor to measure surface ozone concentrations. He joined the Met Office in 2000, where he worked on the development of the STOCHEM chemistry-transport model. He then used it to perform numerous experiments for the UK government's Department of the Environment, Food and Rural Affairs (Defra) to aid the development of policies for the improvement of air quality. He has also used the STOCHEM model to examine interactions between vegetation and the atmosphere, focusing on the impact of hydrocarbons emitted by vegetation and increasing carbon dioxide levels on ozone concentrations. He moved to the consultancy team in 2007, where he designs and oversees climate impacts studies for both government and commercial customers. He has contributed to 39 peer reviewed publications with a specialization in atmospheric chemistry. Among his major publications are: (with Jones, C. D.; Collins, W. J.; Johnson, C. E.; Derwent, R. G., 2003): "Effect of Climate Change on Isoprene Emissions and Surface Ozone Levels", in: *Geophysical Research Letters*, 30,18, (20 September): 1936, <doi:10.1029/2003GRL017642>; (with Collins, W. J.; Johnson, C. E.; Derwent, R. G., 2006): "Present and future acid deposition to ecosystems: The effect of climate change", in: *Atmospheric Environment*, 40,7, (1 March): 1275-1283; (with Collins, W. J.; Hemming, D. L.; Betts, R. A., 2007): "Stomatal conductance changes due to increasing carbon dioxide levels: Projected impact on surface ozone levels", in: *Tellus,* 59B, 3, (23 January): 404-411; (2008): "A multi-model study of the hemispheric transport and deposition of oxidised nitrogen", in: *Geophysical Research Letters*, 35,17, (13 September): L17815, <doi:10.1029/2008 GL035389>; (with Collins, B.; Johnson, C. E., 2009): "Impact of increasing ship emissions on air quality and deposition over Europe by 2030", in: *Meteorologische Zeitschrift*, 18,1, (1 February): 25-39, <doi:10.1127/0941-2948/2008/0296.

Address: Dr. Michael Sanderson, Met Office Hadley Centre, FitzRoy Road, Exeter, Devon EX1 3PB, United Kingdom.

Email: <michael.sanderson@metoffice.gov.uk>.
Website: <http://www.metoffice.gov.uk>.

Jürgen Scheffran (Germany) is Professor at the Institute for Geography and head of the Research Group *Climate Change and Security* (CLISEC) in the KlimaCampus Excellence Initiative of Hamburg University, Germany. Until summer 2009 he held positions at the *University of Illinois at Urbana-Champaign* (UIUC): in the Program in Arms Control, Disarmament and International Security, the Departments of Political Science and Atmospheric Sciences, and the Center for Advanced BioEnergy Research. After his PhD in physics at Marburg University he worked at Technical University of Darmstadt, the Potsdam Institute for Climate Impact Research, and as Visiting Professor at the University of Paris (Sorbonne). His research and teaching interests include: energy security, climate change and sustainable development; complex systems analysis and modelling; technology assessment and international security. He served as advisor to the United Nations, the Technology Assessment Bureau of the German Parliament, the Federal Environmental Agency, and he took part in the German delegation to the climate negotiations in New Delhi in 2002 (COP-8). Recent projects include CLISEC, the ConflictSpace project, the Renewable Energy Initiative and related projects funded by the U.S. Department of Energy, the Energy Biosciences Institute and the Environmental Council at UIUC. He is co-editor of the *INESAP Information Bulletin*, and of the journal *Global Responsibility* and *Wissenschaft und Frieden*. Recent books include: (co-ed. with Khanna, M.; Zilberman, D.): *Handbook of Bioenergy Economics and Policy* (Heidelberg-Berlin: Springer, 2010); (co.ed. with Kropp, J.): *Advanced Methods for Decision Making and Risk Management in Sustainability Science* (New York: Nova Science, 2007); (co-authors Datan, M., Hill, F., Ware, A.) *Securing Our Survival* (Cambridge: IPP-NW, 2007): (co-ed. with Billari, F., Fent, T., Prskawetz, A.); *Agent-Based Computational Modelling in Demography, Economic and Environmental Sciences*" (Heidelber-Berlin: Springer/Physica, 2006).

Address: Prof. Dr. Jürgen Scheffran, Research Group Climate Change and Security (CLISEC), Institut für Geographie, KlimaCampus, Universität Hamburg, Zentrum für Marine und Atmosphärenwissenschaften, Bundesstrasse 53, D-20146 Hamburg, Germany.

Sybil Seitzinger (USA/Sweden) is the Executive Director of the *International Geosphere-Biosphere Programme* (IGBP) in Stockholm, Sweden. She moved to IGBP after leaving her position as Director of the Rutgers/NOAA CMER Program, Rutgers University and has been a visiting Professor at Rutgers University, Institute of Marine and Coastal Sciences since 1994. She received her Ph.D. from the University of Rhode Island School of Oceanography, and then worked as Senior Scientist and Curator at the Academy of Natural Sciences of Philadelphia. She has been a member of the IGBP Scientific Committee since 2003, and her areas of expertise include biogeochemistry, nutrient dynamics, and land/atmosphere/ocean interactions.

Address: Prof. Dr. Sybil Seitzinger, IGBP Secretariat, Royal Swedish Academy of Sciences, Lilla Frescativägen 4A, SE-114 18 Stockholm, Sweden.
Email: <sybil.seitzinger@igbp.kva.se>.
Website: <http://www.igbp.net>.

Gamal M. Selim (Canada/Egypt), PhD Candidate and Sessional Instructor in the Department of Political Science at the University of Calgary (Canada); Lecturer in the Department of Political Science at Suez Canal University (Egypt). He obtained his B.A. and M.A. in Political Science from the American University in Cairo in 2000 and 2005 respectively. His research interests include theories of international relations, democratization, arms control and non-proliferation, and Middle East politics. He received a 'Doctoral Research Award for Disarmament, Arms Control and Non-Proliferation' (2009); a joint initiative from The Simons Foundation and the *International Security Research and Outreach Programme* (ISROP) of Foreign Affairs and International Trade Canada. He has published: "The Arabs and Central Asian Republics", in: *The State of the Arab World: the 11th Arab National Conference* (Beirut: Center for Arab Unity Studies, 2002). He also participated in a number of

scholarly conferences in Canada. His conference papers include "Continuity and Change in the U.S. Arms Control Policy in the Middle East in the Post-Cold War Order" (2009), presented at a special consultation held by Foreign Affairs and International Trade Canada; "Western Reform Initiatives in the Arab World in the Post-September 2001 Era" (2008), presented at the conference on The Muslim World and the West, co-sponsored by the Universities of Victoria and Calgary, and "Arms Control in the Middle East: Motivations and Constraints" (2007), presented at the conference on Middle Eastern and African Studies, sponsored by the University of Alberta.

Address: Mr. Gamal M. Selim, Department of Political Science, University of Calgary, 2500 University Drive NW, Calgary, Alberta, Canada, T2N 1N4.
Email: <gmselim@gmail.com>.

Mohammad El-Sayed Selim (Egypt/Kuwait), Professor of Political Science at Kuwait University. He obtained a Ph.D. in Political Science from Carleton University, Canada in 1979. He majored in foreign policy analysis, theories of international relations and Euro-Mediterranean relations. He taught at Cairo University, the American University in Cairo, King Saud University, the United Arab Emirates University, and Kuwait University. He established the Centre for Asian Studies in Cairo University and served as its first director (1995-2003). He published books and articles in Arabic and English in scholarly journals on issues related to foreign policy analysis, Arab-Asian and Euro-Mediterranean relations. He also represented the Government of Egypt in world and Asian forums. Among his major books are: *Non-Alignment in a Changing World* (1983); *Relations Among Muslim States* (1991); *Mediterraneanism: a New Dimension in Egypt's Foreign Policy* (1995); *Foreign Policy Analysis* (1998); The *Nationalization of the Suez Canal Company: A Study in Decision Making* (2002); (Co-ed.): *Security and Environment in the Mediterranean*, and author of "Conceptualizing Security by Arab Mashreq Countries", (2003); *The Development of International Politics in the Nineteenth and Twentieth Centuries* (2008), He has published a number of academic papers on Euro-Mediterranean relations such as, "Egypt and the Euro-Mediterranean Partnership: Strategic Choice or Adaptive mechanism," in: *Mediterranean Politics* (1997); "Weapons of Mass Destruction in the Euro-Mediterranean World: An Arab Perspective", in: *Mediterranean Politics* (2000); "The environment in the 2002 Arab Human Development Report: A critique", in *Arab Studies Quarterly* (Spring 2004); "Globalization and the Social Sciences", in: *Journal of Social Sciences*, Kuwait University (2006); "The Environmental Risks and strategies in the GCC States" (2007), Tohuko University, Japan. He has recently translated Daisaki Ikeda and Majid Tehranian: *Global Civilization, A Buddhist-Islamic Dialogue*, into Arabic .The translation was published by the National Center for Translation, Higher Council for Culture, Cairo, 2010. He has also delivered the Keynote address entitled, "The Interchange of Civilizations in the Mediterranean area," at the conference of the Institute for Mediterranean Studies of Pusan University of Foreign Studies, April 2010.

Address: Prof. Dr. Mohammad El-Sayed Selim, Dept of Political Science, Faculty of Social Sciences, Kuwait University, P.O. Box 68168, Kefan, Kuwait.
Email: <mselimeg@hotmail.com>.

Anja D. Senz is holding an M.A. for Political Science, Sociology and Anthropology at the University of Trier, Germany. She studied Chinese at Zhongshan University in Guangzhou (P.R.China). Currently she is lecturer at the Institute of Political Science and the Institute of East Asian Studies at University of Duisburg-Essen and executive director of the Confucius Institute Metropolis Ruhr. As a research fellow she contributed to two research projects at the University of Duisburg-Essen one on participation and village elections in China (funded by the DFG) and the other one on an international comparison on village governance (funded by the EU). Her research focus is institutional change and stability in China and in her PhD thesis she analysed decision-making processes in Chinese villages. She has field research and working experience in PR China, Hong Kong, Korea, India and Nepal. She is Co-editor of the China Companion, a comprehensive source for research on the Politics, International Relations and Political Economy of contemporary China, (www.thechinacompanion.eu). Among her recent publications are: (co-author with Heberer, Thomas): "Reform, Demokratisierung, Stabilität oder Kollaps? Literaturbericht zur Entwicklung des chinesischen Herrschaftssystems", in: *Politische Vierteljahresschrift*, 50,2 (2009): 306-326; "Vier Demokratien für China's Dörfer?", in: *Das neue China*, 2 (2008): 19-22; (co-author with Heberer, Thomas): *China's Significance in International Politics. Domestic and External Developments and Action Potentials* (Bonn: German Development Institute, 2007).

Address: Ms. Anja D. Senz, University of Duisburg-Essen, Confucius Institute Metropolis Ruhr, Bismarckstr. 120, 47057 Duisburg.

Reena Singh (Germany/India) is a Research Associate at the Department of Geography, University of Cologne. She holds a M.A and M.Phil in Geography from Delhi School of Economics, Delhi. She has completed her doctorate at the University of Cologne. Her research interests are urban and social problem, urban vulnerability studies, water system and health related issues. She has worked as research associate for a project about "*Enhancing the flow of water in river Yamuna upstream Delhi*", funded by the Ministry of Environment and Forestry and on another project entitled 'Poverty *eradication and role of local institutions in comparative perspective: with focus on Kalahandi, Bhojpur and Chittoor'*, funded by the Planning Commission, India. She has published a short paper entitled 'A new approach to analyse water related vulnerability in megacities: case study of Delhi', (2006), in: WHOCC Newsletter No. 10, another full length paper entitled 'Wastewater related risk and social vulnerability', (2008), in: SOURCE 10 – a publication series of UNU-EHS. She has also made contribution to a joint publication entitled 'Vulnerability in megacities: an integrated approach using high resolution satellite data and social analysis, in: Wuyi, W., Krafft, T., and Kraas, F., (Eds.) (2006): Global change, urbanisation and health. She has participated in numerous national and international seminars and given oral and poster presentations about her ongoing research works.

Address: Dr. Reena Singh, 1/H/6 Saha Rajab Road, Hastings, Kolkata, 700022 West Bengal, India.
Email: <ushtoreena@gmail.com>.

Paul J. Smith (USA) is an Associate Professor with the US Naval War College in Newport, Rhode Island, where he specializes in transnational and nontraditional security issues. He has recently examined the security implications of climate change and has published articles on that subject for *Contemporary Southeast Asia* (Singapore) and *Orbis* (United States). He is author of: *The Terrorism Ahead: Confronting Transnational Violence in the 21st Century* (M.E. Sharpe, 2007). His edited books include *Terrorism and Violence in Southeast Asia: Transnational Challenges to States and Regional Stability* (M.E. Sharpe, 2004) and *Human Smuggling: Chinese Migrant Trafficking and the Challenge to America's Immigration Tradition* (Center for Strategic and International Studies, 1997). He holds a B.A. from Washington and Lee University (Virginia), an M.A. from the University of London, School of Oriental and African Studies (SOAS) and his PhD degree from the University of Hawaii.

Address: Prof. Dr. Paul J. Smith, Naval War College, NSDM, Code 1B, 686 Cushing Road, Newport, RI 02841-1207, USA.
Email: <paul.smith@nwc.navy.mil>.

Eduard Soler i Lecha (Spain) is a Research Fellow leading the Mediterranean and Middle East lines of study at the *Barcelona Centre for International Affairs* (CIDOB) and lecturer at IBEI, *Institut Barcelona d'Estudis Internacionals*. He holds a PhD in International Relations and is a graduate in Political Science, both at the Autonomous University of Barcelona. He is a member of the Observatory of European Foreign Policy and participates in different transnational research projects and networks such as EuroMeSCo, INEX or EU4SEAS. He has published in books and in journals: *Mediterranean Politics*, *Insight Turkey* and

Europe's World. Among his most recent publications are: EuroMeSCo paper n. 80 *Flexible Multilateralism: Unlimited Opportunities? The Case of Civil Protection in the Mediterranean* (with Niklas Bremberg, Ahmed Driss, Jacob Horst and Isabelle Werenfels) and he coordinated the special issue of *Revista CIDOB d'Afers Internacionals* on Spanish Arab and Mediterranean Policy. His main areas of work are: Euro-Mediterranean relations, the process of Turkey's entry into the EU, Spain's Mediterranean policy and security in the Mediterranean. He has also collaborated with different areas of the printed and audiovisual media.

Address: Dr. Eduard Soler i Lecha, CIDOB, c/Elisabets 12, 08001 Barcelona, Spain.
Email: <esoler@cidob.org>.
Website: <www.cidob.org>.

Achim Steiner (Germany) is Executive Director of the *United Nations Environment Programme* (UNEP) and Under-Secretary General of the United Nations. See *biographies of authors of forewords and preface essays.*

Anastasia Svirejeva-Hopkins (Russia/Canada/Germany) has worked at PIK since 1999**.** See *biographies of authors of forewords and preface essays.*

Sýdýka Tekeli Yeþil (Turkey/Switzerland): Ph.D. (Epidemiology), Researcher at the Swiss Tropical and Public Health Institute. She holds master degrees in public health and in European public health both from the University of Bielefeld, Germany. She gained her Ph.D. at University of Basel, Switzerland. When she prepared her Ph.D. she worked on a project about factors affecting individual preparedness for an earthquake in Istanbul. Her research areas are disaster management in health systems, disaster epidemiology and public education programmes for disasters. She created some specific tools for the "Workshop Strengthening Health Systems' Response to Crises" conducted by the Disaster Preparedness and Response Unit of the WHO Europe during her internship in 2004. Her publications include: "Public health and natural disasters: disaster preparedness and response in health systems", in: *Journal of Public Health* 14,5 (October 2006): 317–324; "Individual preparedness and mitigation actions for a predicted earthquake in Istanbul", in: *Disasters*, i.p.; "Factors motivating individuals to take precautionary action for an expected earthquake in Istanbul", in: *Risk Analysis*, August 2010; "Home preparedness" in: Bradley Penuel, K.; Statler, M. (Eds): *Encyclopedia of Disaster Relief* (Thousand Oaks CA: Sage Publications), i.p.

Address: Dr. Sidika Tekeli Ye^{g}il, Swiss Tropical and Public Health Institute, Department of Epidemiology and Public Health, Socin Str. 57 P.O Box, 4002 Basel, Switzerland.
Email: <sidika.tekeli-yesil@unibas.ch> and <sidikatekeli@hotmail.com>.

Asli Toksabay Esen (Turkey) is a Policy Analyst at the *Economic Policy Research Institute of Turkey* (TEPAV). She has received a M.Sc. degree in Economics from Middle East Technical University and an M.A. in International Political Economy from the University of Warwick. She has been a doctoral candidate at McMaster University in Political Science, expecting a degree in 2009. She works primarily on Turkey's integration to the European Union, Turkish politics as well as on gender issues. Among her publications are: (coauthor with M. Aydin, 2007): "Conditionality, Impact and Prejudice: A Concluding View from Turkey", in: Tocci, N. (Ed.): *Talking Turkey: Conditionality, Impact and Prejudice in Turkey-EU Relations*; (coauthor with T. Bölükbaþý, 2008): "Attitudes of Key Stakeholders in Turkey Towards EU-Turkey Relations: Consensual Discord Or Contentious Accord?"; in: Tocci, N. (Ed). *Talking Turkey: Views from Stakeholders for a Tailored Communication Strategy.*

Address: Asli Toksabay Esen, TEPAV, Sogutozu Caddesi, No 43, Sogutozu, 06560, Ankara, Turkey.
E-Mail: <asli.esen@tepav.org.tr>.

Veerle Vandeweerd (Belgium), Director of the Environment and Energy Group at UNDP. As part of her career with the UN system, she has held the positions of Acting Director of UNEP´s Division of Environmental Policy Implementation, Coordinator of the Global Programme of Action for the Protection of the Marine Environment from Land-based Activities, Head of the UNEP's Regional Seas, Coral Reefs & Small Island Developing States Programmes, and Deputy Director of UNEP´s Division of Environmental Policy Implementation. From 1989 to 1999 she oversaw several global environmental monitoring systems, such as the Global Environmental Monitoring System Pollution Programmes on Water, Air and Food, and assessment. She was also Director of Environmental Assessment and Reporting for the Flemish Region, Belgium. She has authored and co-authored over 100 publications on environmental monitoring and assessment. She also initiated and directed the Global Environmental Outlook (GEO) Report Series of UNEP, a major reference work for academics and policy makers. She was a Lecturer in Biochemistry at the University of Lusaka, Zambia and spent many years in Africa working in humanitarian assistance. She holds a PhD in Biochemistry from the University of Antwerp, Belgium. She has overseen the preparation of over 100 publications dealing primarily with environmental monitoring and assessment. She holds a Ph.D. in Biochemistry from the University of Antwerp, Belgium and was a Lecturer in Biochemistry at the University of Lusaka, Zambia. Among her major publications: "Global Monitoring and Reporting: A New Paradigm?", in: Brune, D. et al (Eds.): *The Global Environment: Science, Technology and Management* (Berlin: Wiley-VCH, 1997): 973–986.

Address: Dr. Veerle Vandeweerd, Director of the Environment and Energy Group, Bureau for Development Policy, UNDP, 304 East 45th Street, New York, NY 10017, U.S.A.
Email: <veerle.vandeweerd@undp.org>.

Juan Carlos Villagrán de León (Guatemala) is Programme Officer, UN-SPIDER Programme, UNOOSA, United Nations Office in Vienna; former academic officer, Head, Risk Management Section, UNU-EHS. He completed his undergraduate education in physics at the Worcester Polytechnic Institute, in Worcester, Massachusetts in 1981. He

then continued his graduate education at the University of Texas in Austin, Texas, where he was awarded his PhD degree in experimental condensed matter physics in 1987. After completing a post-doctoral programme at this University, he returned to Guatemala, where he established the Applied Physics Laboratory within the Faculty of Systems Engineering and Computer Sciences at Francisco Marroquin University. At the request of National Coordinating Agency for Disaster Reduction of Guatemala, he provided technical assistance on disaster preparedness, focusing on early warning systems. By 2001, he was a regional consultant on risk management and early warning, and was conducting research in geophysics, as well as on vulnerability and risk assessment. In 2004 he became an Academic Officer in the *United Nations University Institute for Environment and Human Security* (UNU-EHS) in Bonn where conducted research, provided technical and scientific advise to various national and international agencies, and authored, co-authored, and edited more than 70 publications including books, journal papers, research reports, lecture notes, as well as many articles for the media in several languages. Among his major publications are: (2008): *Riesgo Sísmico en el Sector Vivienda en Guatemala* [A document which presents the results of a risk assessment of the housing sector in Guatemala and its evolution in the last four decades.] (Guatemala City: CIMDEN-VILLATEK); (2008): *Rapid Assessment of Potential Impacts of a Tsunami. Lessons from the Port of Galle in Sri Lanka*, Source, No. 9/2008 (Bonn: UNU-EHS); (2006): *Vulnerability a Conceptual and Methodological Review*, Source, No. 4/2006 (Bonn: UNU-EHS); (2005): "Quantitative Vulnerability and Risk Assessment in Communities in the Foothills of Pacaya Volcano in Guatemala", in: *Journal of Human Security and Development,* 1,1; (2001): *La Naturaleza de los Riesgos, un Enfoque Conceptual* [Introduction to the theory of risks and risk management] (Guatemala City: CIMDEN-VILLATEK).

Personal Address: Dr. Juan Carlos Villagrán de León, UN-SPIDER Programme, UNOOSA. Wagrammer Strasse 5, A-1400 Vienna, Austria.
Email; <villatek@hotmail.com> and <juan-carlos.villagran@unoosa.org>.

Femke Vos (The Netherlands/Belgium) is a Researcher at the WHO collaborating *Centre for Research on the Epidemiology of Disasters* (CRED) located within Research Institute Health and Society of the University of Louvain, Brussels. She graduated as an Engineer in Human Nutrition and Health, specializing in Public Health. Since 2006, she has worked in Nutritional Sciences developing a database on micronutrients (INRA, France). In her current role, she analyses global data on natural disaster impacts on human society within the CRED international disaster database (EM-DAT). She contributes to providing data to governmental and non-governmental organizations, universities and research organizations worldwide. Next to training and information provision, she focuses on strengthening the quality of national and regional disaster databases in Asia by studying disaster database methodology and interoperability. Among her major publications are: *Annual Disaster Statistical Review: The numbers and trends* 2009 (CRED: Brussels, 2010).

Address: Ms. Femke Vos, Centre for Research on the Epidemiology of Disasters (CRED), Department of Public Health, University of Louvain, 30.94 Clos Chapelle-aux-Champs, 1200 Brussels, Belgium.
Email: <Femke.Vos@uclouvain.be>.

Wolfgang Wagner (Austria) is Professor of Social and Economic Psychology at Johannes Kepler University, Linz, Austria, and affiliated with the University of the Basque Country, San Sebastián, Spain. His research work is on societal psychology, social and cultural knowledge, popularization of science, racism and fundamentalism, and social representation theory. In these fields he has authored and co-authored more than 120 journal papers and book chapters, authored and co-edited several books, including (with N. Hayes): *Everyday Discourse and Common-Sense – The Theory of Social Representation* (New York: Palgrave Macmillan, 2005) and (with T. Sugiman; K. Gergen; Y. Yamada): *Meaning in Action – Construction, Narratives and Representations* (Tokyo: Springer, 2008). He is associate editor of *Culture and Psychology* (Sage), *Public Understanding of Science* (Sage) and of *Papers on Social Representations*; at: <http://www.psych.lse.ac.uk/Psr/>.

Address: a. Univ.-Prof. Dr. Wolfgang Wagner, Inst. of Education and Psychology, Johannes Kepler Universität, 4040 Linz, Austria.
Website: <http://www.swp.jku.at/>.

Bruno Andreas Walther (Germany) was Science Officer for the *bioGENESIS* and *bioDISCOVERY* Core Projects at the *DIVERSITAS* secretariat in Paris from 2007-2009 during which time this chapter was written. He obtained a bachelor degree from Amherst College, Massachusetts, USA (1993), and a D Phil from Oxford University, United Kingdom (1998). He held postdoctoral positions at the Konrad Lorenz-Institute for Comparative Ethology, Vienna, Austria (1998-2000), the Zoological Museum, University of Copenhagen, Denmark (2000-2003), the Department of Zoology, University of Cambridge, United Kingdom (2004) and the Centre of Excellence for Invasion Biology, University of Stellenbosch, South Africa (2005-2006) where his research concentrated on the behaviour, ecology and conservation of Afrotropical, Neotropical and Palearctic migrant birds and the modelling of their distributions using GIS techniques, as well as statistical methods for species richness estimation, host-parasite and predator-prey interactions, and global biodiversity monitoring and indicators. He is now assistant professor for environmental science at Taipei Medical University, Taiwan.

Address: Dr. Bruno Andreas Walther, DIVERSITAS, Muséum National d'Histoire Naturelle (MNHN), Maison Buffon, 57 rue Cuvier – CP 41, 75231 Paris, Cedex 05, France.

Koko Warner (United States) is the Head of the Environmental Migration, Social Vulnerability, and Adaptation Section at UNU-EHS. She researches risk management strategies of the poor in adapting to changing environmental and climatic conditions, particularly environmentally induced migration and social vulnerability. She served on the management board of the EACH-FOR project, a first-time global survey of environmentally induced migration in 23 countries. She was Co-Chair of the German Marshall Fund project on Climate Change and Migration. She helped found and is on the Steering Committee of the *Climate Change, Environment, and Migration Alliance* (CCEMA) and works extensively in the context of the UNFCCC climate negotiations on adaptation (particularly in risk management and migration). She is co-chair of the German Marshall Fund Study Team on Climate Change and Migration, part of the FP7 Project *Climate Change, Hydro-conflicts and Human Resources* (CLICO), oversees the work of the Munich Re Foundation Chair on Social Vulnerability project at UNU-EHS, a network of 7 endowed professors and a network of experts working on related topics. She is the UNU focal point to the UNFCCC for climate adaptation and the Nairobi Work Programme and for the UN Secretary General's High Level Committee on Programming (a UN-wide coordinating body for "the UN delivering as one" in areas such as climate change). She is a member of the UN's Interagency Standing Committee, Task force on Climate Change, Migration and Displacement. She studied development and environmental economics at George Washington University, and the University of Vienna where she received her PhD in economics as Fulbright Scholar. Previously she worked at IIASA, and the Swiss Federal Institute for *Snow and Avalanche Research* (SLF) at the *Swiss Federal Institute of Technology* (ETH Zurich). She has published in *Nature*, *Climate Policy*, *Global Environmental Change*, *Disasters*, *Environmental Hazards*, *Natural Hazards*, *The Geneva Papers on Risk and Insurance - Issues and Practice*, and other journals. She serves on the editorial board of the *International Journal of Global Warming*.

Address: Dr. Koko Warner, UNU-EHS, UN Campus, Herman-Ehlersstr. 10, 53175 Bonn, Germany.
Email: <warner@ehs.unu.edu>.
Website: <www.ehs.unu.edu>; <www.climate-insurance.org> and <http://www.ehs.unu.edu/article:223?menu=64>.

Tanja Wolf (Germany), Dr., is a Medical Geographer. Her scientific research focuses on health effects of climate change. She obtained her masters in geography in Bonn, Germany (2002) with a thesis on "Sustainable water management in Delhi, India". In 2009 she was awarded a PhD from King's College, London, UK with a thesis on "assessing vulnerability to heat stress in urban areas", using the example of Greater London. Her interest is in bridging the gap between science and policy in the area of global environmental change and human health. In 2007 she was a contributing author to the IPCC chapter on human health. She gained experience in academia and policy, working at the scientific secretariat of the German National Committee on Global Change Research (2000-2003) and at the Regional Office for Europe of the World Health Organization (since 2004). Recent publications include: (2004): "Gli effetti dei cambiamenti climatici sull'ecosistema", in: *Micron*, 1,2: 28–30; (co-author with Glenn McGregor, Mark Pelling and Simon Gosling, 2007): *Social impacts of heatwaves*. EEA report series "Using science to create a better place"; (Co-ed. with Bettina Menne, 2007): *Environment and health risks from climate change and variability in Italy* (Copenhagen – Rome: WHO Regional Office for Europe, APAT); (co-author with Glenn McGregor, Antonis Analitis, 2009): "Assessing Vulnerability to Heat Stress in Urban Areas. The Example of Greater London", in: *Epidemiology*, 20,6: S24.

Oran Young (USA) is a Professor of Environmental Policy at the Bren School of Environmental Science and Management, University of California, Santa Barbara. Specializing in the analysis of environmental institutions with particular reference to international regimes, he also serves as co-director of the Program on Governance for Sustainable Development at the Bren School. He served for six years as founding chair of the Committee on the Human Dimensions of Global Change of the National Academy of Sciences in the United States and chaired the Scientific Steering Committee of the international project on the Institutional Dimensions of Global Environmental Change (IDGEC) under the auspices of the International Human Dimensions Programme on Global Environmental Change (IHDP). He currently chairs the Scientific Committee of the IHDP. An expert on Arctic issues, he served as vice-president of the International Arctic Science Committee, chair of the Board of Governors of the University of the Arctic, and co-chair of the Arctic Human Development Report. His work as author or co-author of over twenty books and numerous scholarly articles includes: *Institutions and Environmental Change: Principal Findings, Applications, and Future Directions*; *The Institutional Dimensions of Environmental Change: Fit, Interplay, and Scale*; *Governance in World Affairs*; *International Governance: Protecting the Environment in a Stateless Society*; and *International Cooperation: Building Regimes for Natural Resources and the Environment.*

Address: Prof. Dr. Oran Young, Bren School of Environmental Science and Management, University of California at Santa Barbara, Santa Barbara, CA 93106-5131, USA.

Hongyuan Yu (People's Republic of China) is an Associate Professor and Deputy Director of the Center of International Organizations and Laws at the Shanghai Institutes for International Studies. He got his Ph.D degree from the Chinese University of Hong Kong, and M.Phil degree from Renmin University of China. From 1998 to 2000 he worked

with the administrative centre for China's Agenda 21 at the Ministry of Science and Technology. He is the author of numerous publications, including: *Global Warming and China's Environmental Diplomacy* (New York: Nova Science Publishers, 2008); "Environmental Change and the Asia Pacific", in: *Global Change, Peace, and Security*, 17,1; "Knowledge and Climate Change Policy Coordination in China", in: *East Asia: An International Quarterly*, 21,3; "The Logic of Collective Action in International Environmental Cooperation", in: *World Economics and Politics* [Shi Jie Jing Ji Yu Zheng Zhi], No. 5, 2007 (in Chinese); "Interest-based Explanation for Environmental Policy Coordination in China", in: *The Academic Journal of Fudan University* [Fu Dan Xue Bao], No. 1, 2006 (in Chinese); "Global Environment Facility (GEF) and China's Environmental Diplomacy", in: *Contemporary Asia-Pacific Studies* [Dang Dai Ya Tai], No.2, 2006 (in Chinese).

Address: Prof. Dr. Hongyuan Yu, No. 19-2304Lane 151, Donglan Road, Shanghai 201102, China.
Email: <yuhongyuan@hotmail.com>.

Kaveh Zahedi (United Kingdom) is the Climate Change Coordinator at the *United Nations Environment Programme* (UNEP). He is responsible for managing UNEP's climate change work programme and major partnerships with the United Nations and the World Bank. He has worked at UNEP headquarters in Kenya (1995–1999), the Regional Office for Latin America and the Caribbean in Mexico (1999–2004), the UNEP World Conservation Monitoring Centre in the UK (2004–2007) and is now based at the Division of Technology, Industry and Economics in Paris. Before joining UNEP, he worked with a non governmental organization in the UK as project manager for development aid projects in Latin America and the Middle East. He holds a Masters degree from the Fletcher School of Law and Diplomacy, Tufts University, USA, and a BSc (Econ.) degree in Economics & Geography from the University College London.

Address: Mr. Kaveh Zahedi, 15 Rue de Milan, Paris 75009, France.
Email: <kaveh.zahedi@unep.org>.
Website: <http://www.www.unep.org/climatechange>.

Ricardo Zapata-Marti (Mexico/Chile) is an economist who joined the United Nations *Economic Commission for Latin America and the Caribbean* (ECLAC, CEPAL) in 1975. Previously he was chief of the International Trade Unit at the subregional headquarters of the ECLAC at the United Nations in Mexico, since 1989 he has been ECLAC's Focal Point for Disaster Evaluation, where he coordinated the updating of the *ECLAC Handbook for the Evaluation of the Socioeconomic and Environmental Impact of Disasters* (2003), the current international standard tool for assessing natural disasters, including five hurricanes in the Caribbean (2004). He cooperated with the World Bank's assessments of the Indian Ocean Tsunami in December 2004 and has led more than 20 disaster assessment missions in Latin American and Caribbean. A member of the *Intergovernmental Panel of Climate Change* (IPCC) that shared the 2007 Nobel Peace Price and was a lead author in Working Group 2, given his experience in assessing the socioeconomic and environmental impact of disasters. He conducted various interdisciplinary research projects and programmes on trade, integration, tourism, and small and medium size enterprises. He participated in many conferences, symposia, seminars on trade issues and on the socio-economic impact of natural disasters, including the United Nations' World Conferences on Natural Disaster Reduction and the Davos Global Forum on Disasters and Climate Change. Prior to joining ECLAC, he was a professor and researcher at the Universidad Católica in Peru and Universidad Católica de Guayaquil in Ecuador, and a columnist and editor in Ecuador (1972–1975). He studied international relations at the El Colegio de México (1967-68), and economics at the Universidad Católica del Perú (1970-72).

Address: Mr. Ricardo Zapata-Marti, Av. Dag Hammarsjkjold 3477, Vitacura, Santiago, Chile, Casilla Postal 179 – D, Santiago, Chile (official), Av. Polanco 32-3, Col. Polanco, C.P. 11570, México D.F., México (residence).
Email: <ricardo.zapata@cepal.org> and <rzapatamarti@aol.com>.

Zhongqin Zhao (People's Republic of China) is a Brigadier General of the Chinese Army. He was educated at the Military University Xian and worked as troop commander, trainer and chief of company in the 127th Division of the Chinese Army. After his studies at the Military Academy Shijiazhuang, he received a diploma in military affairs in 1992 and worked at the academy as a lecturer until 2001. In 2002 he took part in a course at the Military Academy in Hamburg and, in 2003, became assistant professor at the Military Academy Shijiazhuang. During his stay as a fellow at IFSH he was working on the influence of globalisation on Chinese security. He has published books on Information Warfare and on Military Philosophy and the Highly Engineered War as well as over 40 articles in journals and newspapers, among them, articles on military leadership theory and the work of the high command.

Md Zillur Rahman (Bangladesh) is currently a PhD Scholar at the Fenner School of Environment and Society, College of Medicine, Biology and Environment, in The *Australian National University* (ANU), Canberra, Australia. He holds a research-based MSc. in technological and socio-economic planning from Roskilde University, Denmark, and as part of his MSc thesis he undertook advanced courses in International Development at NORAGRIC, *Universitetet for Milj- og Biovitenskap* (UMB) in ÅS, Norway. In 2007, he had conducted a participatory action research based fieldwork on 'rural water resources management and local livelihood development' in Bangladesh. In addition, he was a chairman of board of *Stichting HESDOB*; a development organization and he was also an executive in the board of *CareGambia* in Netherlands. His PhD research addresses the key question: What are the determinant factors of social networks for the sustainability of water resource management in rural areas in Bangladesh under Climate Change conditions?

Address: Mr. Md Zillur Rahman, Fenner School of Environment and Society, Building 48, The Australian National University (ANU), Canberra, ACT 0200, Australia.

Hexagon Series on Human and Environmental Security and Peace (HESP)

This book series includes monographs and edited volumes that cross scientific disciplines and develop common ground among scientists from the natural and social sciences, as well as from North and South, addressing common challenges and risks for humankind in the 21st century.

The 'hexagon' represents six key factors contributing to global environmental change – three *nature-induced* or supply factors: *soil*, *water* and *air* (atmosphere and climate), and three *human-induced* or demand factors: *population* (growth), *urban systems* (habitat, pollution) and *rural systems* (agriculture, food). Throughout the history of the earth and of *homo sapiens* these six factors have interacted. The supply factors have created the preconditions for life while human behaviour and economic consumption patterns have also contributed to its challenges (increase in extreme weather events) and fatal outcomes for human beings and society. The series covers the complex interactions among these six factors and their often extreme and in a few cases fatal outcomes (hazards/disasters, internal displacement and migrations, crises and conflicts), as well as crucial social science concepts relevant for their analysis.

Further issues related to three basic areas of research: approaches and schools of environment, security, and peace, especially in the environmental security realm and from a human security perspective, will be addressed. The goal of this book series is to contribute to a fourth phase of research on environmental security from a normative peace research and/or human security perspective. In this series, the editor welcomes books by natural and social scientists, as well as by multidisciplinary teams of authors. The material should address issues of global change (including climate change, desertification, deforestation), and its impacts on humankind (natural hazards and disasters), on environmentally-induced migration, on crises and conflicts, as well as for cooperative strategies to cope with these challenges either locally or in the framework of international organizations and regimes.

From a human-centred perspective, this book series offers a platform for scientific communities dealing with global environmental and climate change, disaster reduction, human, environmental and gender security, peace and conflict research, as well as for the humanitarian aid and the policy community in national governments and international organizations.

The series editor welcomes brief concept outlines and original manuscripts as proposals. If they are considered of relevance, these proposals will be peer-reviewed by specialists in the field from the natural and the social sciences. Inclusion in this series will also require a positive decision by the publisher's international editorial conference. Prior to publication, the manuscripts will be assessed by the series editor and external peer reviewers.

Mosbach, Germany, August 2010
